

Preliminary flood risk assessment: Doncaster Metropolitan Borough Council

This addendum by Doncaster Metropolitan Borough Council (2017) updates the council's preliminary flood risk assessment report published in 2011. Read the addendum in conjunction with the [preliminary assessment report](#).

Addendum

The preliminary flood risk assessment (PFRA) and flood risk areas (FRAs) for Doncaster Metropolitan Borough Council (Doncaster MBC) were reviewed during 2017, using all relevant current flood risk data and information.

Following the 2017 review, there are no changes to the assessment of risk since the preliminary assessment report was published in 2011.

Past flood risk

There have been over 100 incidents of surface water flooding which meet the localised threshold (1 or more internal flooding to a residential property) of undertaking a Section 19¹ flooding investigation since 2011. These flooding incidents have been listed in the Annex 1 (Past Floods), and have been listed under the dates of the storms, rather than listing individual properties. However this information can be made available if required, as each individual occurrence of flooding has had a Section 19 investigation undertaken.

Future flood risk

Environment Agency modelling has provided a more detailed understanding of Flood Risk (allowing for climate change) which will inform decision making on future development.

Flood risk areas (FRAs)

No FRAs have been identified within the borough of Doncaster for the purposes of the Flood Risk Regulations (2009) second planning cycle.

Other changes

No significant changes since the 2011 assessment.

**Doncaster Metropolitan Borough Council
December 2017**

LIT 10776

¹ An investigation into a flooding event that a lead local flood authority (LLFA) is required to carry out under Section 19 of the [Flood and Water Management Act 2010](#), and according to the LLFA's local flood risk management strategy
