Syndromic Surveillance System: England

23 April 2018 Year: 2018 Week: 16 In This Issue: Key messages Data to: 22 April 2018 Key messages. Syndromic indicators at a glance. During week 16 there has been a slight increase in eye problems (figure 9) within expected seasonal levels. The age group most affected was 5-14 Data summary. years old (figure 9a). Indicators by syndrome. Cold/flu. Fever. Cough. Difficulty Breathing. Sore throat. Diarrhoea. Vomiting.

Syndromic indicators at a glance:

Indicator	Trend	Level *
Cold/flu	decreasing	similar to baseline levels
Fever	increasing	below baseline levels
Cough	decreasing	below baseline levels
Difficulty breathing	decreasing	below baseline levels
Sore throat	decreasing	similar to baseline levels
Diarrhoea	no trend	below baseline levels
Vomiting	no trend	below baseline levels
Eye problems	increasing	below baseline levels

*Since week 47 2014 new baselines have been introduced for comparison with previous years. Baselines use historical data from the NHS Direct surveillance system to estimate seasonal trend but with levels adjusted to reflect changes since the switch to using NHS 111 data in September 2013.

Data summary:

Year	Week	Total calls
2018	16	237,750

WW Public Health England

23 April 2018

1: Total calls.

The total number of syndromic calls recorded each day by NHS 111.

100000

90000

Daily 'cold/flu' calls as a percentage of total calls. Baselines are constructed from historical data since 2010, including data from NHS 111 and NHS Direct.

2a: Cold/flu calls by age group

Cold/flu calls as a percentage of total calls within each age group, shown as a 7 day moving average adjusted for bank holidays. Age groups below 5 years old, not shown.

23 April 2018	Year: 2018 Week: 1	6
Introduction to charts:	 Weekends and bank holidays are marked by vertical grey lines (bank holidays darker grey). 	
	• A 7-day moving average (adjusted for bank holidays) is overlaid on the da data reported in each chart, unless specified.	ily
	 Baselines represent seasonally expected levels of activity and are constructed from historical data. Furthermore, they take into account any known substantial changes in data collection, population coverage or reporting practices. Baselines are refreshed using the latest data on a regular basis. 	1
	 NHS 111 call data are analysed on a daily basis to identify national and regional trends. A statistical algorithm underpins each system, routinely identifying activity that has increased significantly or is statistically significantly high for the time of year. Results from these daily analyses a assessed by the ReSST, along with analysis by age group, and anything deemed of public health importance is alerted by the team. 	
Notes and further information:		
information.	Further information about NHS 111 can be found at:
