

## **Future Telecoms Infrastructure Review Call for Evidence**

5G is only going to create problems, not solve them. It is incapable of meeting the need for data - only wired broadband can meet that. 5G antennas use the same frequencies used by military crowd control weapons.

Furthermore, 5G antennas will use 20 to 30 times or more energy than a wired connection that can provide the same speed. This is hugely inefficient and an unnecessary waste of resources in an age where the environment is at stake and in crisis,

The solution is what we already have - wired broadband connections and copper landlines for voice service (POTS/PSTN). Please do not let these valuable services be disconnected. They are the solution - they are the future.

I cannot emphasize the assault on public health enough. 5G will be absolutely devastating to anyone living near these transmitters. Property values are also at stake, as well as our **basic human rights!**

Anyone who has any role in promoting or allowing 5G, which will assault our health, must be held directly responsible for the consequences of their actions.
