Key Messages.

Weekly summary.

Total contacts.

Syndromic indicators.

Notes and caveats.

Further information.

Acknowledgements.

Key messages

Consultations for heat stroke increased during week 30 (figure 11) in line with the recent hot weather.

Consultations for vomiting continued to increase in children aged under 5 years during week 30 (figure 9a).

A Heat-Health Watch system operates in England from 1 June to 15 September each year. As part of the Heatwave Plan for England, the PHE Real-time Syndromic Surveillance team will be routinely monitoring the public health impact of hot weather using syndromic surveillance data during this period. Heat-health watch level (current reporting week): Level 1/3 Summer preparedness/ Heatwave action http://www.metoffice.gov.uk/public/weather/heat-health/

Syndromic indicators at a glance:

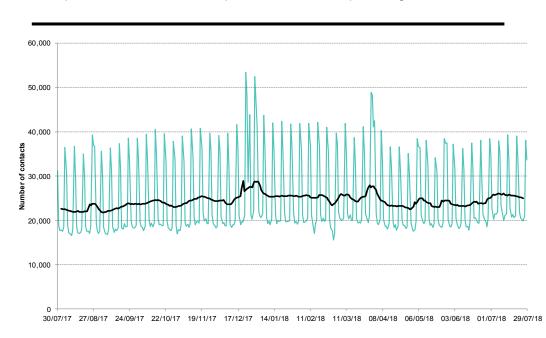

Number of contacts and percentage of Read coded contacts.

Key indicator	No. of contacts	% Week 30	% Week 29	Trend*
All OOH contacts, all causes	175,084			
Acute respiratory infection	6,757	9.08	9.61	ullet
Influenza-like illness	45	0.06	0.05	←→
Bronchitis/bronchiolitis	56	0.08	0.07	←→
Difficulty breathing/wheeze/asthma	1,105	1.48	1.59	←→
Pharyngitis	52	0.07	0.09	←→
Gastroenteritis	3,532	4.74	4.65	^
Diarrhoea	933	1.25	1.25	←→
Vomiting	1,256	1.69	1.57	←→
Myocardial infarction	605	0.81	0.86	←→
Heatstroke	51	0.07	0.02	^

^{*}Trend: reports on the trend seen over previous weeks in the percentage of Read coded contacts.

1: Total out-of-hours contacts:

Daily total number of out-of-hours and unscheduled contacts and 7 day average (adjusted for bank holidays).

2: Acute Respiratory Infection daily contacts.

Shown as a percentage of the total contacts with a Read code and as a 7 day average*.

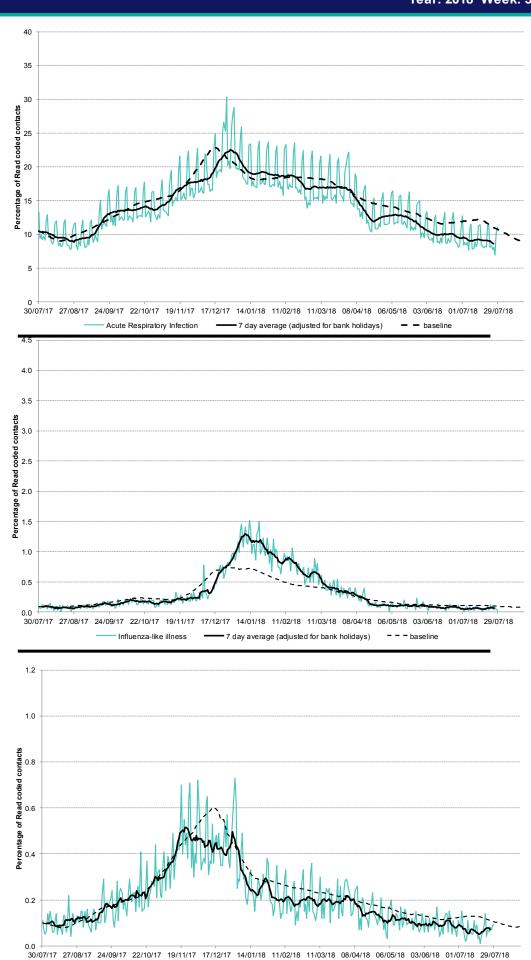

3: Influenza-like illness daily contacts.

Shown as a percentage of the total contacts with a Read code and as a 7 day average*.

4: Bronchitis/ bronchiolitis daily contacts.

Shown as a percentage of the total contacts with a Read code and as a 7 day average*.

*7-day moving average adjusted for bank holidays.

7 day average (adjusted for bank holidays)

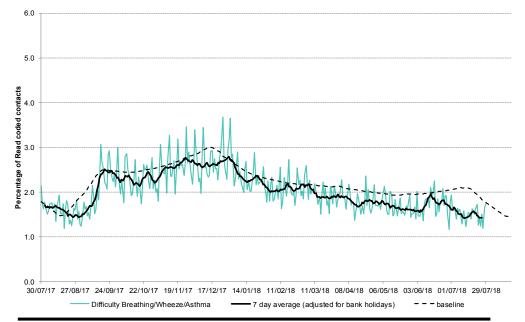

Bronchitis

- - - baseline

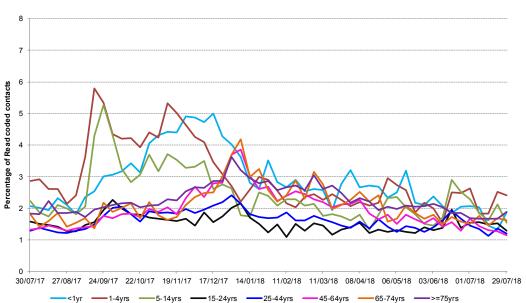

5: Difficulty breathing/ wheeze/asthma daily contacts.

Shown as a percentage of the total contacts with a Read code and as a 7 day average*.

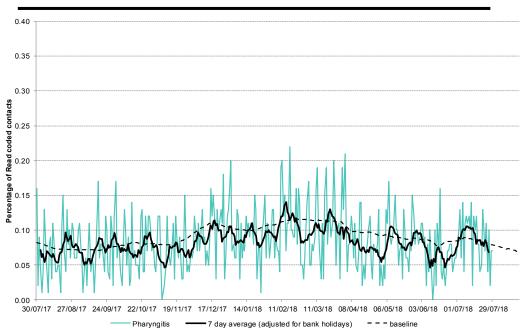

5a: Difficulty breathing/wheeze/ asthma daily contacts by age group.

6: Acute pharyngitis and persistent sore throat.

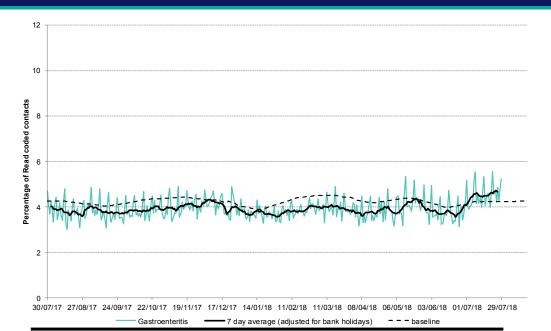

Shown as a percentage of the total contacts with a Read code and as a 7 day average*.

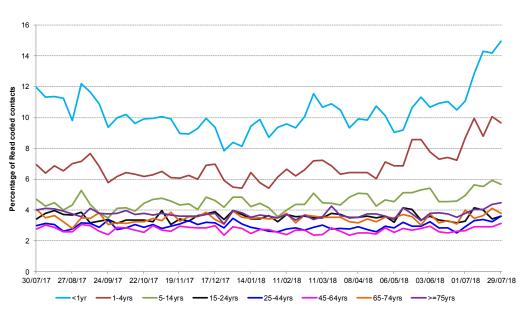

7: Gastroenteritis daily contacts

Shown as a percentage of the total contacts with a Read code and as a 7 day average*.

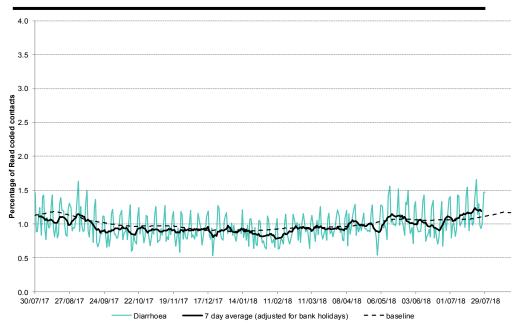

7a: Gastroenteritis weekly contacts by age group.

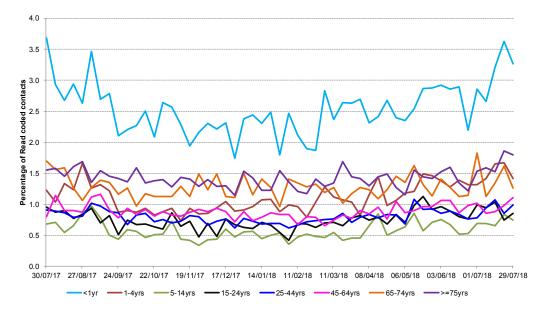

8: Diarrhoea daily contacts.

Shown as a percentage of the total contacts with a Read code and as a 7 day average*.

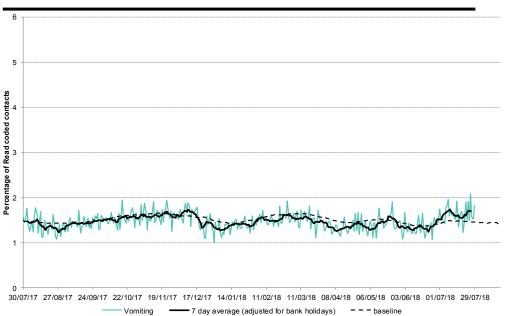

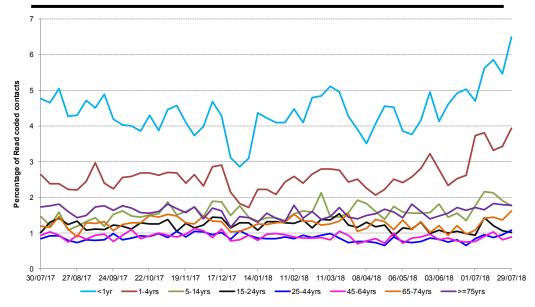

9: Vomiting daily contacts.

Shown as a percentage of the total contacts with a Read code and as a 7 day average*.

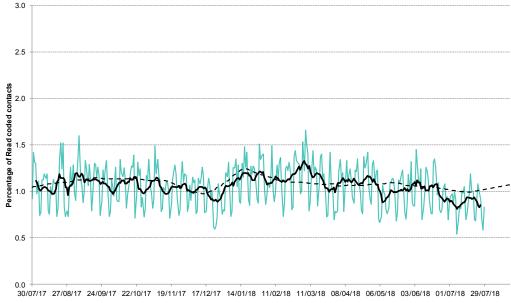

9a: Vomiting weekly contacts by age group.

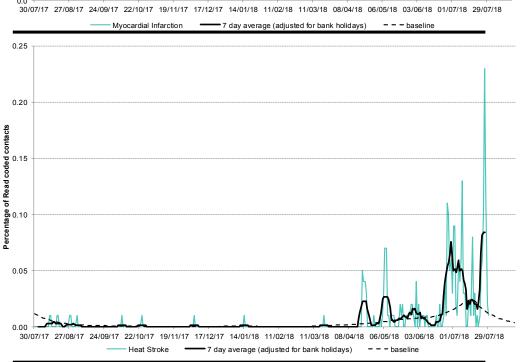

10: Myocardial Infarction daily contacts.

Shown as a percentage of the total contacts with a Read code and as a 7 day average*.

11: Heatstroke contacts

Shown as a percentage of the total contacts with a Read code and as a 7 day average*.

Intentionally left blank

Notes and caveats:

- This bulletin presents data from the Public Health England (PHE) GP Out
 -of-hours\Unscheduled Care Surveillance System (GP OOHSS).
- Fully anonymised data from GP out-of-hours (OOH) and unscheduled care service providers in England are being transferred to the PHE for analysis and interpretation by the PHE Real-time Syndromic Surveillance Team (ReSST).
- This system supplements existing PHE syndromic surveillance systems by monitoring data on general practitioner consultations outside of routine surgery opening times (evenings, weekends and bank holidays) and unplanned contacts within NHS primary care.
- The key indicators presented within this bulletin are derived by grouping selected Read coded consultations.
- GP OOH consultation data are analysed on a daily basis to identify
 national and regional trends. A statistical algorithm underpins each
 system, routinely identifying activity that has increased significantly or is
 statistically significantly high for the time of year. Results from these daily
 analyses are assessed by the ReSST, along with analysis by age group,
 and anything deemed of public health importance is alerted by the team.
- Baselines represent seasonally expected levels of activity and are constructed from historical data. Furthermore, they take into account any known substantial changes in data collection, population coverage or reporting practices. Baselines are refreshed using the latest data on a regular basis.

Further information:

The GP Out-of-Hours Surveillance System Bulletin can also be downloaded from the PHE Real-time Syndromic Surveillance website which also contains more information about syndromic surveillance:
