Syndromic Surveillance System: England

17 September 2018	Yea	ar: 2018 Week: 37	-
In This Issue: Key messages.	Key messages	Data to: 16 September 201	18
Syndromic indicators at a glance.	Calls for difficulty breathing and cough increas seasonal expectations (figure 4, 5); increases	es were particularly notable in	
Data summary.	the under 15 years age groups (figure 4a, 5a).		
Indicators by syndrome.			
Total calls.			
Cold/flu.			
Fever.	A Heat-Health Watch system operates in England from 1 June	e to 15 September each year. As part	
Cough.	of the Heatwave Plan for England, the PHE Real-time Syndro	mic Surveillance team will be	
Difficulty Breathing.	routinely monitoring the public health impact of hot weather us during this period.	sing syndromic surveillance data	

Heat-health watch level (current reporting week): Level 1 Summer preparedness http://www.metoffice.gov.uk/weather/uk/heathealth/

Syndromic indicators at a glance:

Indicator	Trend	Level *
Cold/flu	increasing	above baseline levels
Fever	increasing	below baseline levels
Cough	increasing	below baseline levels
Difficulty breathing	increasing	below baseline levels
Sore throat	no trend	below baseline levels
Diarrhoea	no trend	below baseline levels
Vomiting	no trend	below baseline levels
Eye problems	no trend	below baseline levels

*Since week 47 2014 new baselines have been introduced for comparison with previous years.
