- a) The United Kingdom has been free from African horse sickness for the last 2 years prior to the date of export, and no vaccination is permitted in the United Kingdom against this disease.

- b) *The United Kingdom has been free from Venezuelan equine encephalomyelitis for the last 2 years prior to the date of export, and no vaccination is permitted in the United Kingdom against this disease.

or

*no case of Venezuelan equine encephalomyelitis has occurred in the United Kingdom for the last 2 years prior to the date of export.

- c) *The United Kingdom has been free from Eastern and Western equine encephalomyelitis for the last 2 years prior to the date of export, and no vaccination is permitted in the United Kingdom against these diseases.

or

*the horse has been vaccinated within 12 months but not within 30 days of export against Eastern and Western equine encephalomyelitis with inactivated vaccines approved by the Veterinary Authority of the United Kingdom.

Date of vaccination:

- d) *glanders is a notifiable disease in the United Kingdom and no case has been reported during the past 3 years.

or

*glanders is a notifiable disease in the United Kingdom and no case has been reported for a period of at least 6 months and a surveillance programme is in place demonstrating the absence of the disease in accordance with OIE recommendations.

or

*the horse was tested for glanders by the complement fixation test with negative result(s) within 30 days of export.

Date sampled:

e) *The United Kingdom has been free from Surra for the last 12 months prior to date of export.

or

*the horse was tested for Trypanosoma evansi by enzyme-linked immunosorbent assay (ELISA) or the Card Agglutination test CATT) with negative results within 30 days of export.

Date sampled:

f) *The United Kingdom has been free from dourine for the last 12 months prior to date of export.

or

*the horse was tested for Trypanosoma equiperdum by the complement fixation test with negative results within 15 days of export.

Date sampled:

g) *The United Kingdom has been free from equine infectious anaemia for the last 12 months prior to date of export.

or

*the horse was tested for equine infectious anemia by the immunodiffusion (Coggin's) test with negative results within 30 days of export.

Date sampled:

h) *The United Kingdom has been free from equine viral arteritis for the last 12 months prior to date of export-

or

*the horse was tested for equine viral arteritis by the serum neutralisation tests with negative results, or with stable or declining antibody titres at dilution of 1 in 4, twice 14 days apart, within 30 days of export.

Date sampled:

i) *The United Kingdom has been free from equine piroplasmosis for the past 12 months

or

*the horse was subjected to a fluorescent antibody test (IFAT) for equine piroplasmosis with negative results within 30 days of export.

Date sampled:

j) *The United Kingdom has been free from rabies in the past 2 years.

or

*during the 6 months prior to export, the horse has not suffered from or been exposed to nor been in premises infected with rabies, and

i) *the horse has not been vaccinated against rabies*

or

ii) *was vaccinated against rabies using an approved vaccine not less than 30 days and not more than 12 months prior to export*.

*Please delete accordingly

Date of vaccination (if applicable):

k) No case of Hendra-virus infection has been reported in horses in the United Kingdom for the last 3 months prior to export.

- 1) *No case of Nipah virus infection has been reported in horses in the United Kingdom for the last 2 years prior to the date of export.

or

*no case of Nipah virus infection has been reported in horses in the United Kingdom for the past 6 months, or for the past as specified by AVA, prior to the date of export and the horse has undergone two 2 weeks' pre-export isolation at an officially approved premises approved and tested during pre-export isolation for Nipah virus infection with negative results prior to export.

- m) During the 60 days prior to export, the horse has not suffered from or been exposed to nor been in premises infected with **Equine Influenza (EI)**, and was vaccinated against EI according to manufacturer's recommendation with an inactivated or recombinant vaccine approved by the country of export, between 21 and 90 days before shipment either with a primary course or a booster.
- n) All tests were carried out in a laboratory approved by the United Kingdom Veterinary Authority and AVA, using OIE prescribed methodologies.
- o) The horses had been resident in the United Kingdom continuously for at least sixty (60) days immediately prior to export.
- p) During the sixty days prior to export, the horse has not suffered from or been exposed to nor been in premises infected with any condition or disease including the following: equine infectious anaemia, equine viral encephalomyelitis, horse pox, scabies, anthrax, glanders, dourine, surra, strangles, epizootic lymphangitis, ulcerative lymphangitis, equine rhinopneumonitis, equine viral arteritis, equine piroplasmiasis, equine influenza, vesicular stomatitis, Getah virus infection, Hendra virus infection, Nipah virus infection, West Nile virus infection or any other disease of horses notifiable in the United Kingdom.
