Plant Approval Stamp:

**THIS HEALTH ATTESTATION IS NOT AN EXPORT CERTIFICATE
AND IS FOR INTERNAL MOVEMENT WITHIN THE UK ONLY**

Notes for guidance of the certifying veterinarian

ORIGIN & HEALTH STATUS OF BIRDS-(FOOD CHAIN INFORMATION/7514IMC)

Paragraphs IV (a) and (b) refer. If the exporter knows in advance that the meat will be intended for export to India, then the guarantees contained in these two paragraphs of the certificate should be included in the Food Chain Information (FCI) document accompanying the birds to slaughter. These will then form the basis for the completion of this 7514IMC health attestation document, which will have to accompany the meat when moved between UK establishments, including its final movement to the cold store.

Paragraph IV (a)- Born-Bred-Reared-Slaughter clause: only the meat from birds hatched, reared, slaughtered and processed solely in the UK is eligible for export to India.

Paragraph IV (b)- Establishment disease clearance: Evidence of 'incidence' of disease should be interpreted as clinical signs as well as information from production and mortality records, laboratory reports and pathological examinations. Note that the statement refers only to frank outbreaks of clinical disease, and not to agents which are routinely or effectively controlled by vaccination.

IMPORTANT: This guarantee is needed for the farm of origin and for the 12 months prior to dispatch of the birds to slaughter, not only for the flock(s) of origin of the birds and for the life of that/those flock(s).
