

2nd August 2018

## United Kingdom Egg Statistics – Quarter 2, 2018

This release shows quarterly information on the numbers of eggs packed in UK packing stations (which covers the vast majority of total eggs produced), usage and farm-gate egg prices. It also includes monthly information on the trade in eggs and egg products.

### Key results

- 7.7 million Cases of eggs were packed in UK egg packing stations during the second quarter of 2018. This represents 2.3% increase on the second quarter in 2017 and a 0.2% increase on quarter one 2018.
- The average UK farm-gate egg price through the second quarter of 2018 was 69.8 pence per dozen, this represents a 2.1% decrease on quarter one of 2018 and a 0.3% decrease on the same quarter in 2017.
- The production of egg products during the second quarter of 2018 totalled 24.8 thousand tonnes, a 4.6% increase on the previous quarter and a 6.1% increase on the second quarter 2017.

This quarterly release will be next updated at 09:30 on 1st November 2018. Full time series are available to download at: <https://www.gov.uk/government/publications/egg-statistics>.

## Section 1: UK egg packing volumes, methods of production, UK country breakdowns and price statistics

The tables in this section show quarterly information on the volumes of eggs passed through the UK egg packing stations. These eggs generally account for nearly 90% of total egg production. Packing station figures include throughput of both graded and ungraded eggs.

- The number of eggs which went through the packing stations in Q2 2018 increased 2.3% on the same quarter in 2017.
- Egg prices decreased to 69.8p per dozen, a 2.1% fall on Q1 2018 price.

**Figure 1: The number of eggs packed in UK packing stations compared to the UK farm-gate egg price: 2001-2018**

Note: Prices are not adjusted for inflation

(a) From 2012 the price is an average across the survey period rather than an end of period weekly spot price and weighted according to the volumes packed by each packing station. Bonus payments paid are included.

## Section 2: UK egg processing statistics

- The number of eggs bought by UK egg processors in Q2 2018 totalled 1,126 thousand cases (equating to 24.8 thousand tonnes), an increase of 6.1% on the same period in 2017.
- Liquid egg accounted for 67% of the total production in Q2 2018. Total production was up 23% in Q2 2018 compared to the same quarter last year.

**Table 4: Number of eggs bought by UK Egg Processors**

(a) Separate data for Hard Boiled Eggs and Other Products is currently unavailable to avoid disclosure of confidential information.

**Figure 3: Intake and Production of Egg Products by UK Egg Processors (a)**

(a) The volume of eggs processed also includes any processing carried out for external customers who supply their own eggs. This can cause the overall volume of eggs processed to be higher than the volume of eggs purchased, as in the statistics for Q2 2018.

### Section 3: UK Egg Trade

Trade figures are supplied by HM Revenue and Customs. Trade data marked as provisional may be subject to revision.

- The latest data for May 2018 shows imports of shell eggs at 162,000 cases, a 44% increase on the same period last year. Imports of egg products are up 20% at 376,000 cases compared to May 2017.
- Shell egg export figures for May 2018 are 28,000 cases, 54% up compared to the same period in 2017, whilst egg product exports were 9,000 cases, down 12% compared to May 2017. However, the data highlighted in the table below is currently being investigated by HMRC and is therefore subject to change.

## Section 4: Data users, methodology, notes and revisions policy

### Data users

1. Users of the egg statistics include the EU Commission who require the UK farm gate egg price weekly under Regulation EC 546/2003. They have also recently issued a voluntary request for Member States to submit egg production estimates to fill a data gap that exists.
2. Representatives of the egg and poultry industry are also major users of the data. The data on egg production volumes and egg type are key sector indicators for the British Egg Industry Council (BEIC) as they reflect the size of the national laying flock. The British Free Range Egg Producers Association also makes heavy use of our data as it indicates the size of the free range sector. We work closely with these users and consult widely when considering any changes to our surveys or associated datasets.
3. The Home Grown Cereals Authority (HGCA), part of the Agricultural and Horticultural Development Board, rely on egg production data as a good indicator of the commercial layer flock and associated feed demand and hence grain usage by the sector.
4. Our statistics are also often heavily referenced in industry publications such as “Poultry World” and “The Ranger”, the official magazine of the British Free Range Egg Producers Association.

### Methodology

5. **Egg Packing Statistics:** Total egg throughput is modelled using the number of commercial laying hens (which is based on the Defra Hatchery Survey layer chick placings), average egg yields, average mortality rates and the proportion of UK eggs that go through packing stations. To estimate further breakdowns from this total output, Defra runs a quarterly survey of registered UK egg packing stations to collect data on egg production method (i.e. free range, enriched cages etc.), country of packing and prices. This “Egg Packers survey” is a voluntary survey of 27 packing stations across the UK, which accounts for around 75% of eggs packed in the UK. The response rate is typically 100 per cent.
6. The prices obtained on the survey are weighted according to the volume of eggs packed by each packing station to obtain average prices for the UK. From 2012, prices include any bonus payments paid to producers.
7. **Egg processing statistics:** Defra runs a quarterly survey of all registered egg processors. It is a voluntary survey of 11 respondents that collects information on the number of eggs bought by egg processors and the quantity of egg products produced. The response rate is typically 100 per cent.
8. In tables that show numbers of eggs the units used are 'thousand cases'. There are 360 eggs in one case.
9. **Trade statistics:** These figures come from HM Revenue and Customs, but are validated and adjusted if necessary prior to publication. The Standard Industrial Trade Classification codes used to produce each table are given in the footnotes below the tables.
10. The data are subject to a variety of validation checks which identify inconsistencies in the data. All data are cleaned prior to publication.

11. The percentage changes shown are calculated using unrounded figures. Thus any percentage changes calculated using the published (rounded) figures may not equate exactly with the changes shown.
12. The UK 12 month moving totals represent the sum of the 12 months up to and including the date indicated. They can be seen as a trend measure that is not affected by seasonality.
13. Contact details are available on the front page of this notice, for you to send feedback or ask questions about the information provided.

**Revisions policy:**

14. Figures in this notice are provisional and subject to revision. We will provide information about any revisions we make to previously published information in this statistics notice, and the associated datasets. Revisions could occur for various reasons, including:
  - a. if we have not received survey data from respondents we make an estimate based on their previous returns. These estimates will be replaced with actual survey data when it is received.
  - b. survey respondents occasionally supply amended figures for previous periods.

**This quarter there have been revisions to Q4 2017 and Q1 2018 Trade and Egg processor data due to amended HMRC data and revisions to survey data.**
