Subject: Re: RE-DETERMINATION OF LLANBRYNMAIR & CARNEDD WEN WIND FARM PLANNING APPLICATIONS

Dear Sir

Thank you for sending this information, including the letters to the Natural Resources Wales.

I want to contribute my personal observations of birds and their locations in and around Carnedd Wen. I live nearby at Pandy, Llänbrynmair, I regularly cycle in and around the forested area of Carnedd Wen.

I can confirm many sightings of birds of prey, particularly merlins (male and female) and peregrines, plus numerous red kites and buzzards.

In addition the proposed wind farm site is en route to the thousands of migratory birds that pass through the Pandy valley. These consist mainly of swallows and martins, plus fieldfare and redwings. There are indeed many thousands, coming through from April/May heading north and September heading south. If the turbines are a hazard to one species, e.g. birds of prey, they are also to these migratory species too.

Please pass this information to whoever should be in receipt of it.

I thank you.

Best regards
