### Introductory note

#### **This introductory note does not form a part of the permit**

The main features of the permit are as follows.

This permit document allows Mulberry Waste Limited to operate a drum and IBC washing facility under Section 5.3 Part A(1) (a) (ii) Disposal or recovery of hazardous waste with a capacity exceeding 10 tonnes per day involving physico-chemical treatment; Section 5.6 Part A(1) (a) (i) Temporary storage of hazardous waste in a facility with a total capacity exceeding 50 tonnes pending any of the activities listed in Section 5.1, 5.2 and 5.3 and Section S5.4 A(1) (a) (ii) Disposal of non-hazardous waste with a capacity exceeding 50 tonnes per day involving physico-chemical treatment of the Environmental Permitting (England & Wales) Regulations 2016. A waste physical treatment facility will also be incorporated in this permit for the physical treatment of non-hazardous containers for recovery as this not within the scope of the above listed activities. Where possible and practicable, materials from the site processes are sent for recovery. Directly Associated Activities (DAA's) include the storage and subsequent transfer of non-hazardous waste, supplementary power supply in the form of a diesel generator, discharge of clean roof water to sewer, effluent storage and a discharge of effluent to sewer. The site will have a waste storage capacity of 164 tonnes with an annual throughput of 50,000 tonnes.

The site consists of a yard area where incoming containers comprising Intermediate Bulk Containers (IBCs), metal drums, and other containers are stored. Cleaning, shredding, crushing and granulation treatment will be undertaken inside the site building in a number of plants. Containers which can be reused are washed in a proprietary container wash facility within the process building prior to distribution. Containers which are not suitable for re-use will be passed through either a shredder, which washes and shreds the containers, or a granulator which is a dry process, prior to the recovered materials being transferred from site. Aqueous wastes are either stored at the site before being sent for off-site processing or are treated on site using a de-packaging machine, which effectively separates full or partially full containers and their content, collecting and bulking compatible waste products from batches of containers in an IBC before shredding the original container in the integral hammer shredder.

All wet processes are bunded with sealed drainage. Waste containers, metals and plastics left over from the treatment processes are bulked up and removed from site for recycling or disposal.

Raw materials required for the site processes include water and surfactants. Wash waters from the processes are recirculated until these require changing, at which point they will be drained from the plant and tested prior to discharge to sewer under the terms of the sites Trade Effluent Consent with United Utilities PLC. If they are unsuitable for discharge effluents will be removed from site for treatment and disposal at the Mulberry Waste Limited Clydesdale Place site located approximately 300m from Peregrine Place, within the Moss Side Industrial Estate. A diesel generator is required to supplement the mains power for the four site processes, and is located externally, to the south east of the process building.

Emissions from the site consist of a discharge to sewer which is subject to a Trade Effluent Consent, a discharge of clean roof water which is also directed to the sewer and an emission to air from the diesel generator which acts as supplementary power for the treatment plants on site. The diesel generator emissions screen out as insignificant using our [H1 risk assessment tool](#).

The site is operating with an ISO 14001 accredited environmental management system. The fire prevention plan (FPP) for the site has been assessed and found to be compliant with the criteria set out within the [FPP guidance](#).

The status log of the permit sets out the permitting history, including any changes to the permit reference number.

“authorised officer” means any person authorised by the Environment Agency under section 108(1) of The Environment Act 1995 to exercise, in accordance with the terms of any such authorisation, any power specified in section 108(4) of that Act.

“compacting” means compacting involving the flattening or crushing of compactable metal wastes to aid storage and economic transportation to the scrap processor; it is often a preparation for shredding. Compacting may be achieved using a waste handler’s loading shovel (known as “tapping”) or specially-designed hydraulic flattener.

“disposal” means any of the operations provided for in Annex I to Directive 2008/98/EC of the European Parliament and of the Council on waste.

“emissions of substances not controlled by emission limits” means emissions of substances to air, water or land from the activities, either from the emission points specified in schedule 3 or from other localised or diffuse sources, which are not controlled by an emission limit.

“emissions to land” includes emissions to groundwater.

“EP Regulations” means The Environmental Permitting (England and Wales) Regulations SI 2016 No.1154 and words and expressions used in this permit which are also used in the Regulations have the same meanings as in those Regulations.

“granulating” means granulated to a very small size with metal/non-metal separation by air classification and flotation.

“groundwater” means all water, which is below the surface of the ground in the saturation zone and in direct contact with the ground or subsoil.

“Hazardous property” has the meaning in Annex III of the Waste Framework Directive.

“Hazardous waste” has the meaning given in the Hazardous Waste (England and Wales) Regulations 2005 No.894, the Hazardous Waste (Wales) Regulations 2005 No. 1806 (W.138), the List of Wastes (England) Regulations 2005 No.895 and the List of Wastes (Wales) Regulations 2005 No. 1820 (W.148).

“impermeable surface” means a surface or pavement constructed and maintained to a standard sufficient to prevent the transmission of liquids beyond the pavement surface.

“Industrial Emissions Directive” means DIRECTIVE 2010/75/EU OF THE EUROPEAN PARLIAMENT AND OF THE COUNCIL of 24 November 2010 on industrial emissions

“List of Wastes” means the list of wastes established by Commission Decision 2000/532/EC replacing Decision 94/3/EC establishing a list of wastes pursuant to Article 1(a) of Council Directive 75/442/EEC on waste and Council Decision 94/904/EC establishing a list of hazardous waste pursuant to Article 1(4) of Council Directive 91/689/EEC on hazardous waste, as amended from time to time.

- no liquids will run off the surface other than via the system
- all liquids entering the system are collected in a sealed sump, except where liquids may be lawfully discharged.

“separation” means separating wastes into different material types, components and grades.

“sorting” means sorting that may be undertaken by hand or machinery. Sorting enables materials to be processed and recycled appropriately. It may involve separation of different waste types or the separation of different metal types including different ferrous metals, non-ferrous metals and non-metallic materials (e.g. paper and plastic). The sorted metals are graded by visual inspection, supplemented by chemical and other laboratory tests. The physical sorting may be assisted by conveyors and electromagnets.

“Waste code” means the six digit code referable to a type of waste in accordance with the List of Wastes (England) Regulations 2005, or List of Wastes (Wales) Regulations 2005, as appropriate, and in relation to hazardous waste, includes the asterisk.

“Waste Framework Directive” or “WFD” means Waste Framework Directive 2008/98/EC of the European Parliament and of the Council on waste

“year” means calendar year ending 31 December.

Where a minimum limit is set for any emission parameter, for example pH, reference to exceeding the limit shall mean that the parameter shall not be less than that limit.

Unless otherwise stated, any references in this permit to concentrations of substances in emissions into air means:

- in relation to emissions from combustion processes, the concentration in dry air at a temperature of 273K, at a pressure of 101.3 kPa and with an oxygen content of 3% dry for liquid and gaseous fuels, 6% dry for solid fuels; and/or
- in relation to emissions from non-combustion sources, the concentration at a temperature of 273K and at a pressure of 101.3 kPa, with no correction for water vapour content.

“transition metals” means any of the following metals: any compound of scandium, vanadium, manganese, cobalt, copper, yttrium, niobium, hafnium, tungsten, titanium, chromium, iron, nickel, zinc, zirconium, molybdenum and tantalum, as well as these materials in metallic form, as far as these are classified as hazardous substances.

“stabilisation” means processes which change the hazardousness of the constituents in the waste and transform hazardous waste into non-hazardous waste.

“solidification” means processes which only change the physical state of the waste by using additives without changing the chemical properties of the waste.

“partly stabilised wastes” means wastes containing, after the stabilisation process, hazardous constituents which have not been changed completely into non-hazardous constituents and could be released into the environment in the short, middle or long term.
