(c) Net weight of consignment:

(d) Identification marks:

(e) Seal number(s):

II. ORIGIN OF PRODUCTS

(a) Name and address of exporter:

(b) Name, address and official approval number of plant of production (factory):

III. DESTINATION OF PRODUCTS

(a) The product will be despatched from: UNITED KINGDOM
to:

(country and place of destination)

(b) Name and address of consignee:

(c) Means of transportation:

IV. HEALTH INFORMATION

I, the undersigned Official Veterinarian, certify that:

1. the products described at paragraph I bear oval marks, or are made from milk ingredients which bear oval marks, which demonstrate that they are fit for human consumption;
2. the products do not contain milk which originates from holdings on which an epizootic Office International des Epizooties (OIE) Listed disease to which the species of origin is susceptible, and which can be transmitted through milk¹, has been confirmed at the time of collection of the milk;
3. the fresh milk from which the dairy products were made originated from healthy bovine animals on registered holdings under supervision by the competent authority;
4. the products have undergone, or contain milk which has undergone, treatment in accordance with European Union legislation on the health rules on the production of milk and milk products, and meet the microbiological criteria laid down therein, including freedom from salmonella and other pathogenic organisms associated with milk;
5. the milk/milk products were processed in approved or registered establishments that are subject to official control by the competent authority;
6. all the necessary precautions were taken after treatment to prevent contamination of the products;
7. the United Kingdom has a comprehensive programme in place to monitor radioactivity in food and the environment. The results demonstrates that even the most exposed members of the UK public received radiation doses from consumption of local food and exposure to environmental radioactivity (due to discharges and direct radiation) that were below the statutory EU annual dose limit to members of the public of 1 millisievert per year from artificially-produced radionuclides as set in the Council Directive 96/29/Euratom of 13 May 1996.
