# Remote Health Advice

Syndromic Surveillance System:
England

**Public Health England**

# Key messages
**Data to: 10 March 2019**

During week 10 there were further decreases in NHS 111 cold/flu calls, which have returned to 'pre-epidemic' levels (figures 2 & 2b).

A Cold Watch System operates in England from 1 November to 31 March each year. As part of the Public Health England Cold Weather Plan for England the PHE Real-time Syndromic Surveillance Team will be monitoring the impact of cold weather on syndromic surveillance data during this period.
Cold weather alert level (current reporting week): **Level 1 Winter preparedness**
http://www.metoffice.gov.uk/weather/uk/coldweatheralert/

# Syndromic indicators at a glance:

| Indicator | Trend | Level |
|---|---|---|
| Cold/flu | decreasing | pre-epidemic threshold* |
| Fever | decreasing | below baseline levels |
| Cough | decreasing | below baseline levels |
| Difficulty breathing | no trend | below baseline levels |
| Sore throat | no trend | below baseline levels |
| Diarrhoea | increasing | below baseline levels |
| Vomiting | no trend | below baseline levels |
| Eye problems | no trend | similar to baseline levels |

* Moving Epidemic Method (MEM) influenza activity threshold (see notes)
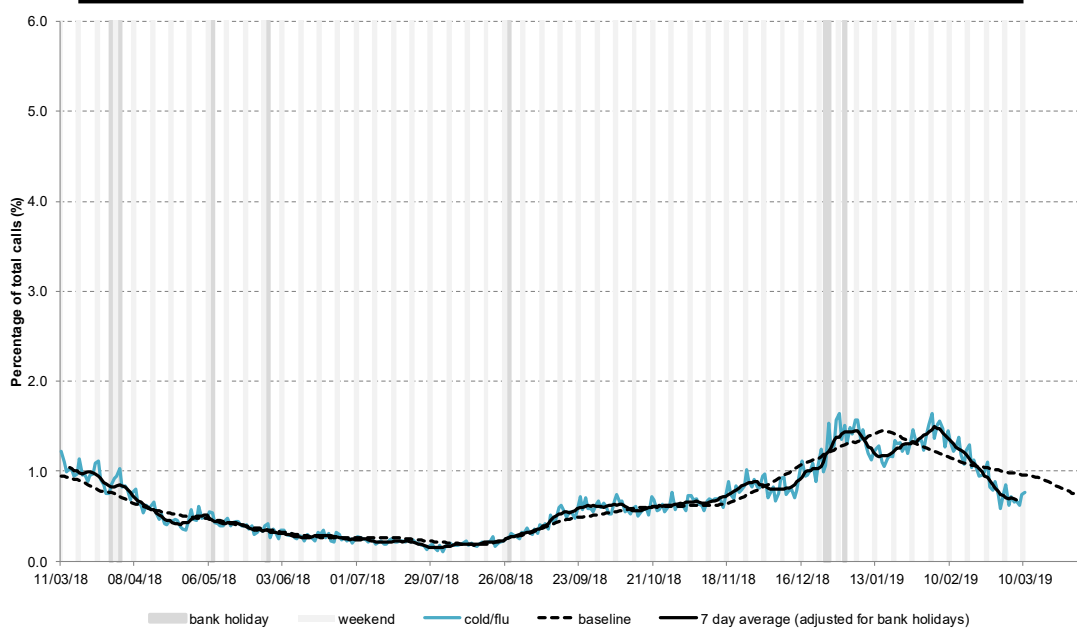

# Data summary:

| Year | Week | Total calls |
|---|---|---|
| 2019 | 10 | 265,777 |

**12 March 2019**  |  **Year:  2019**  |  **Week: 10**

## 1: Total calls.

The total number of syndromic calls recorded each day by NHS 111.

bank holiday    weekend    total calls    7 day average (adjusted for bank holidays)

## 2: Cold/flu

Daily 'cold/flu' calls as a percentage of total calls. Baselines are constructed from historical data since 2013.

bank holiday    weekend    cold/flu    baseline    7 day average (adjusted for bank holidays)

## 2a: Cold/flu by age group

Cold/flu calls as a percentage of total calls within each age group, shown as a 7 day moving average adjusted for bank holidays. Age groups below 5 years old not shown.

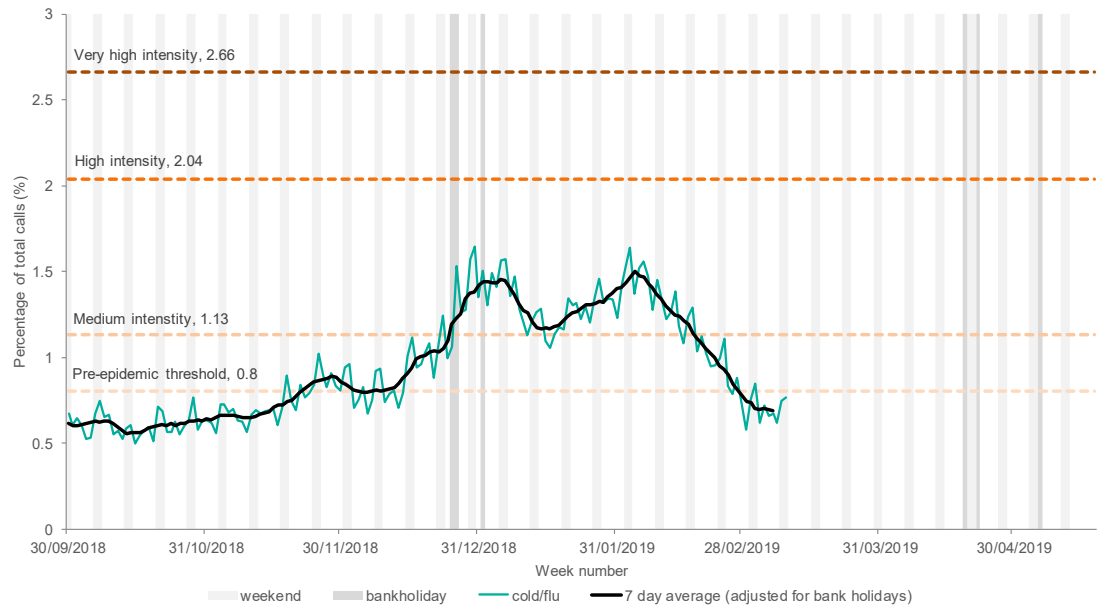

5 to 14    15 to 44    45 to 64    65 to 74    >74    All ages

**2b: Daily cold/flu calls (winter 2018/19) with MEM influenza activity thresholds (see notes)**

Daily 'cold/flu' calls as a percentage of total calls. Baselines are constructed from historical data since 2013.

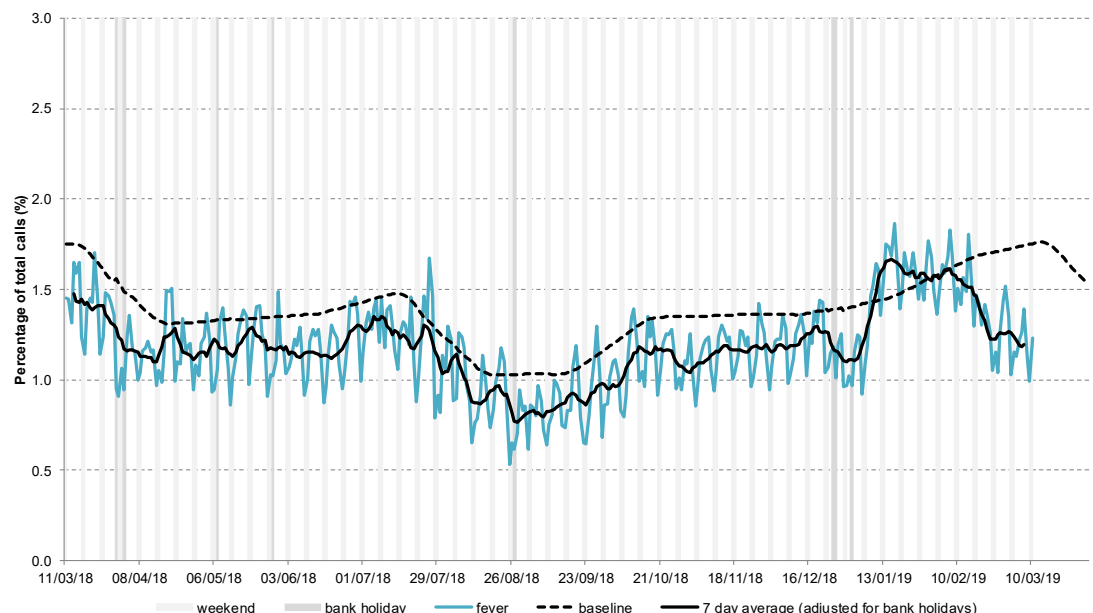

**2c: Daily cold/flu calls by week with MEM influenza activity thresholds and comparison to previous seasons (see notes)**

Average daily calls as percentage of total calls by week (7 day moving average, all England, all ages).

**3: Fever**

Daily 'fever' calls as a percentage of total calls. Baselines are constructed from historical data since 2013.
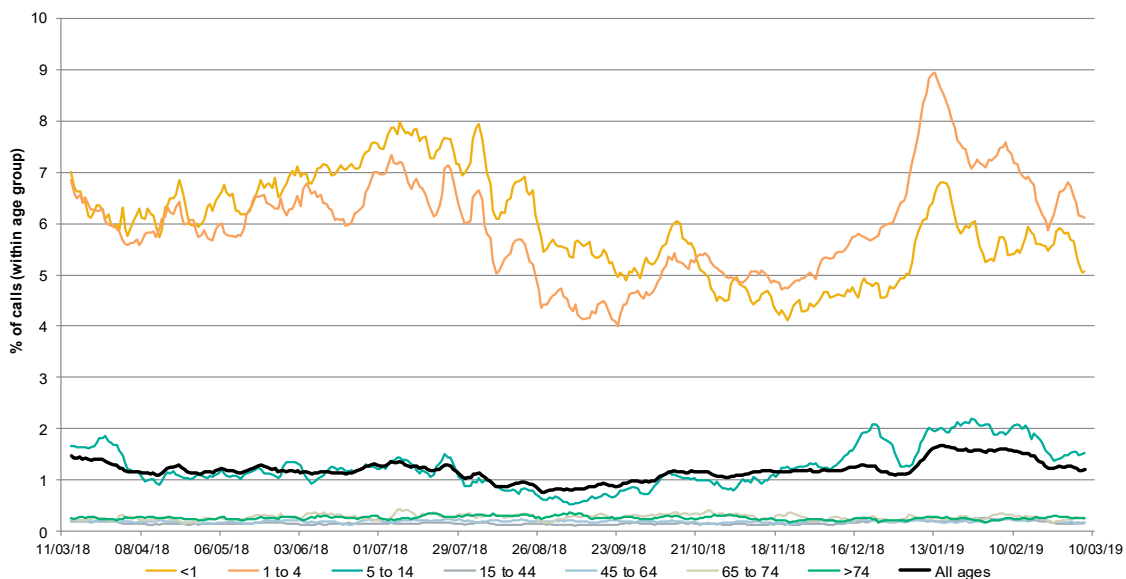

### 3a: Fever calls by age group

Fever calls as a percentage of total calls within each age group, shown as a 7 day moving average adjusted for bank holidays.

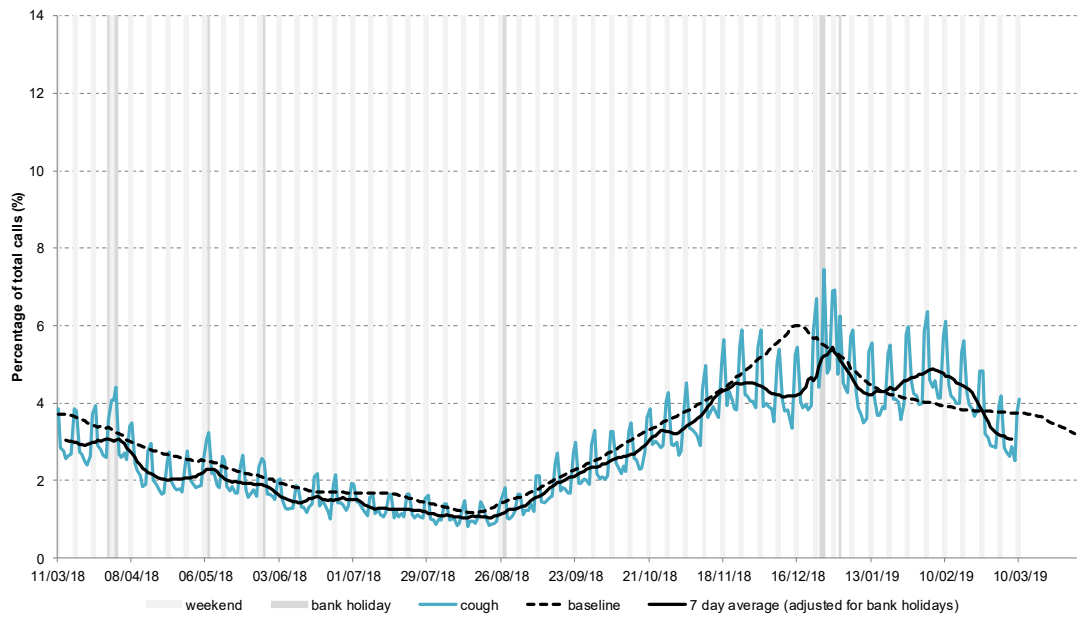

**Intentionally blank**

**Intentionally blank**

## 4: Cough

Daily 'cough' calls as a percentage of total calls. Baselines are constructed from historical data since 2013.

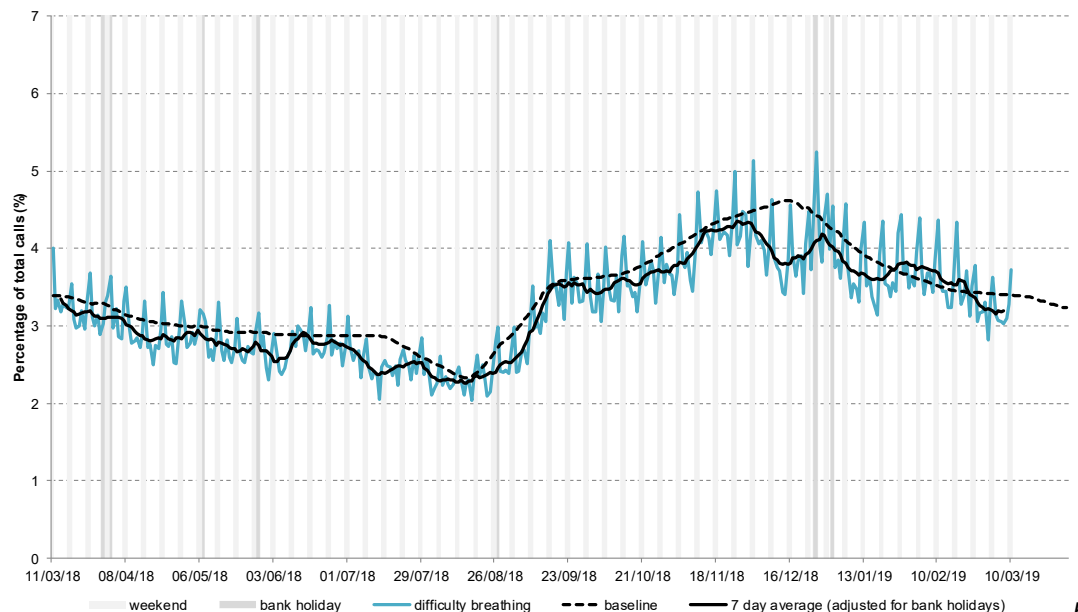

## 4a: Cough calls by age group

Cough calls as a percentage of total calls within each age group, shown as a 7 day moving average adjusted for bank holidays.

## 5: Difficulty breathing

Daily 'difficulty breathing' calls as a percentage of total calls. Baselines are constructed from historical data since 2013.
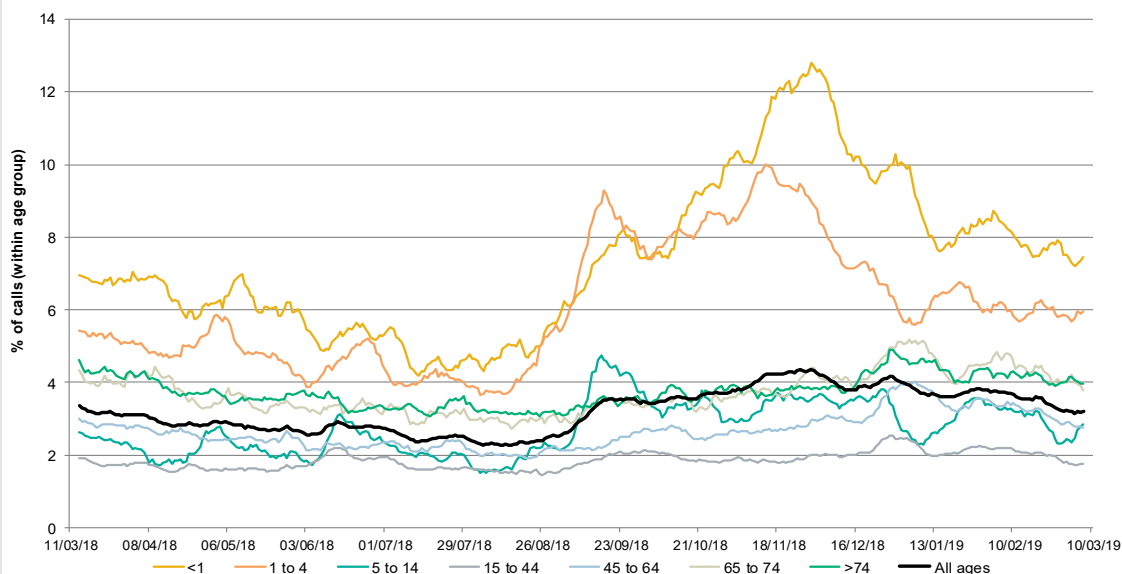

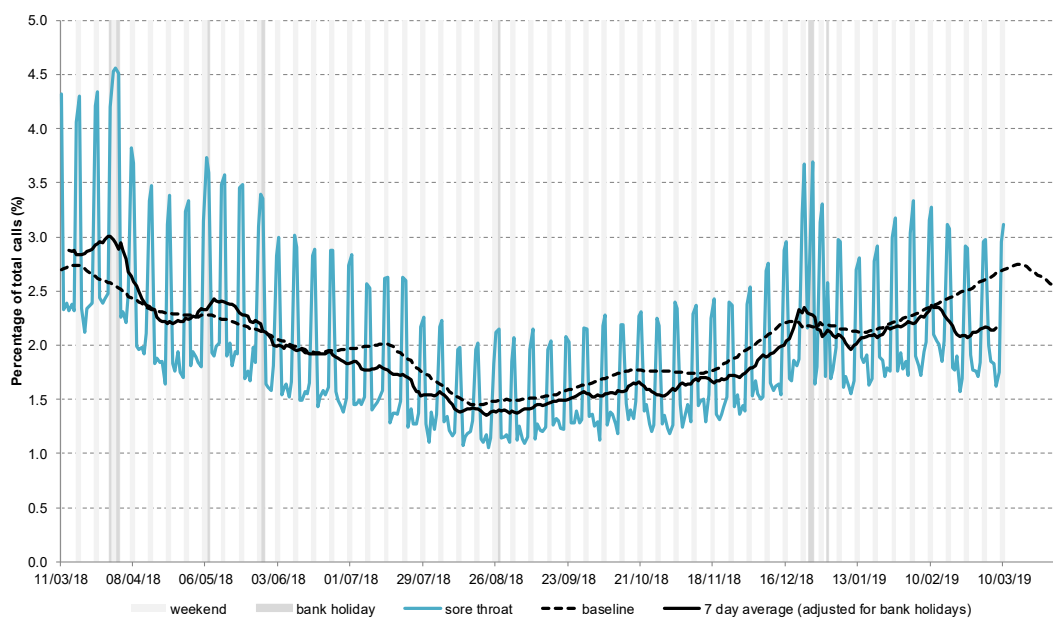

## 5a: Difficulty breathing calls by age group

Difficulty breathing calls as a percentage of total calls within each age group, shown as a 7 day moving average adjusted for bank holidays.

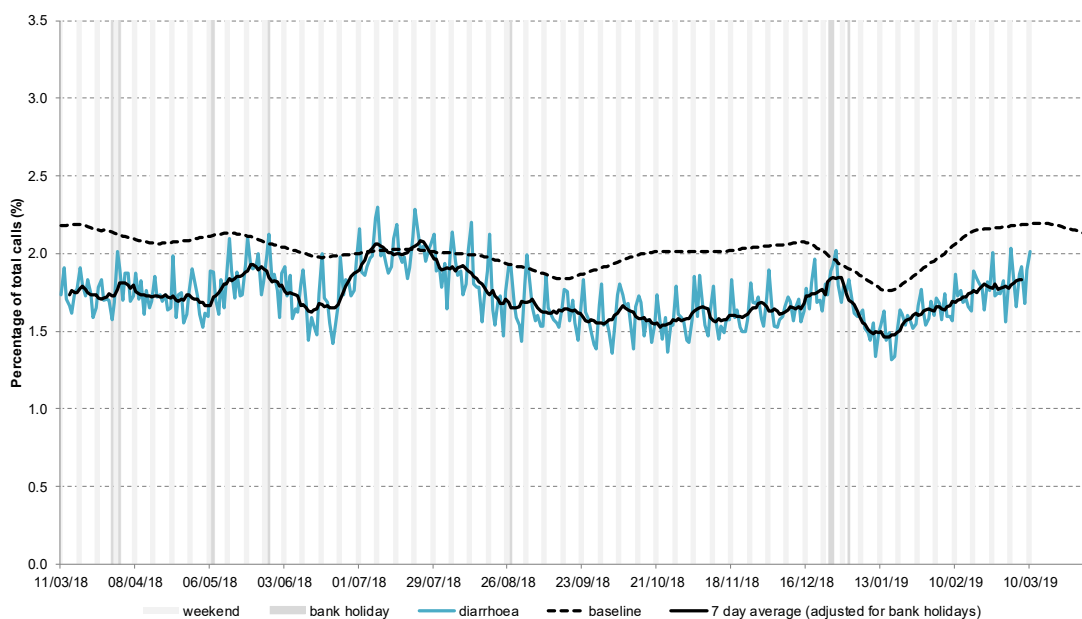

## 6: Sore throat

Daily 'sore throat' calls as a percentage of total calls. Baselines are constructed from historical data since 2013.

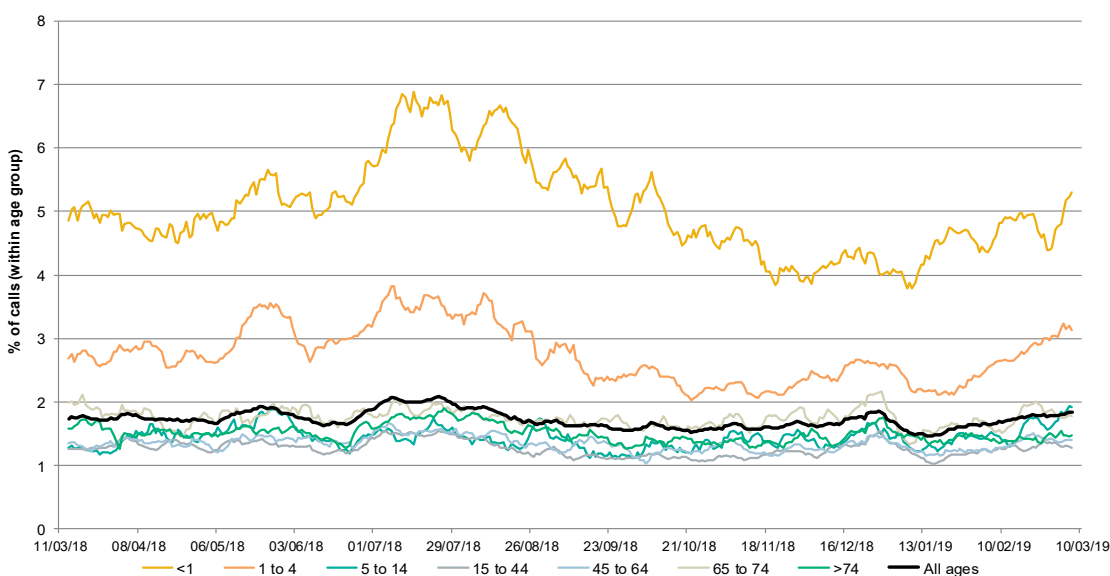

**Intentionally blank**

## 7. Diarrhoea

Daily 'diarrhoea' calls as a percentage of total calls. Baselines are constructed from historical data since 2013.
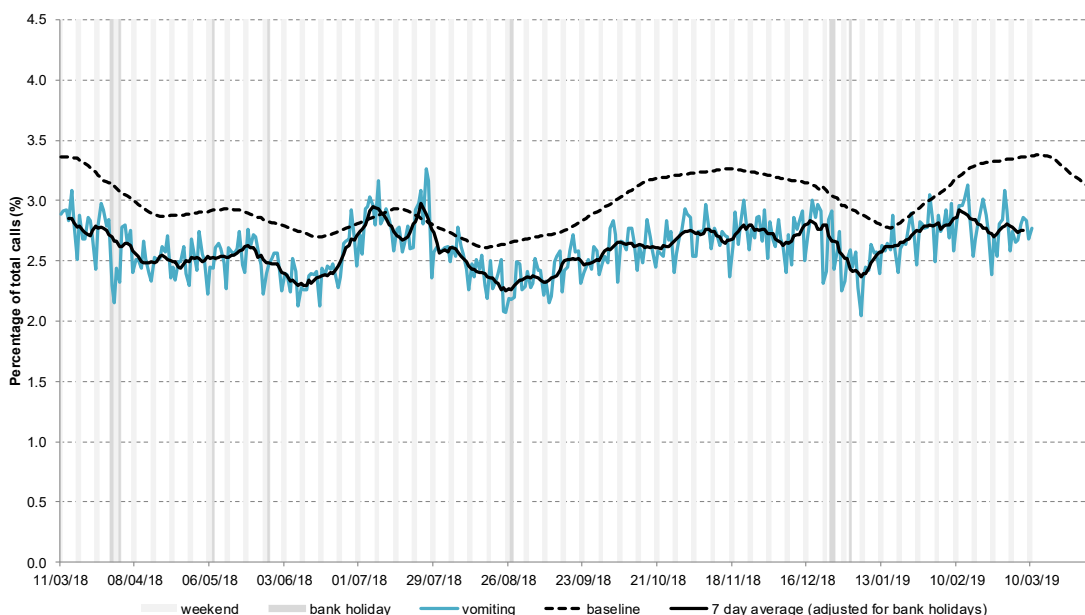

## 7a: Diarrhoea calls by age group

Daily 'diarrhoea' calls as a percentage of total calls. Baselines are constructed from historical data since 2013.

## 8: Vomiting calls

Daily 'vomiting' calls as a percentage of total calls. Baselines are constructed from historical data since 2013.
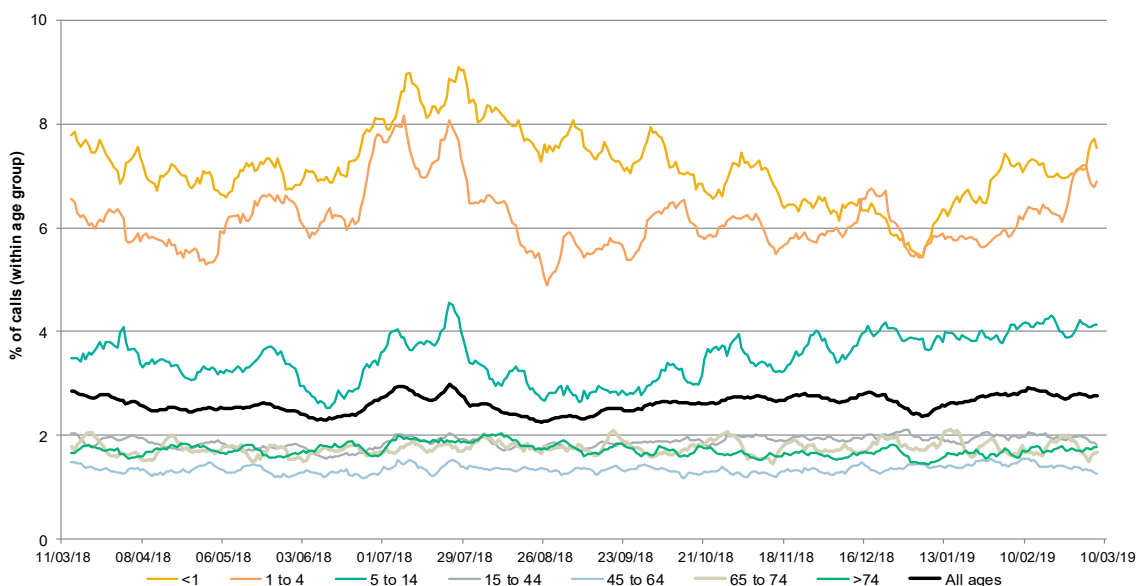

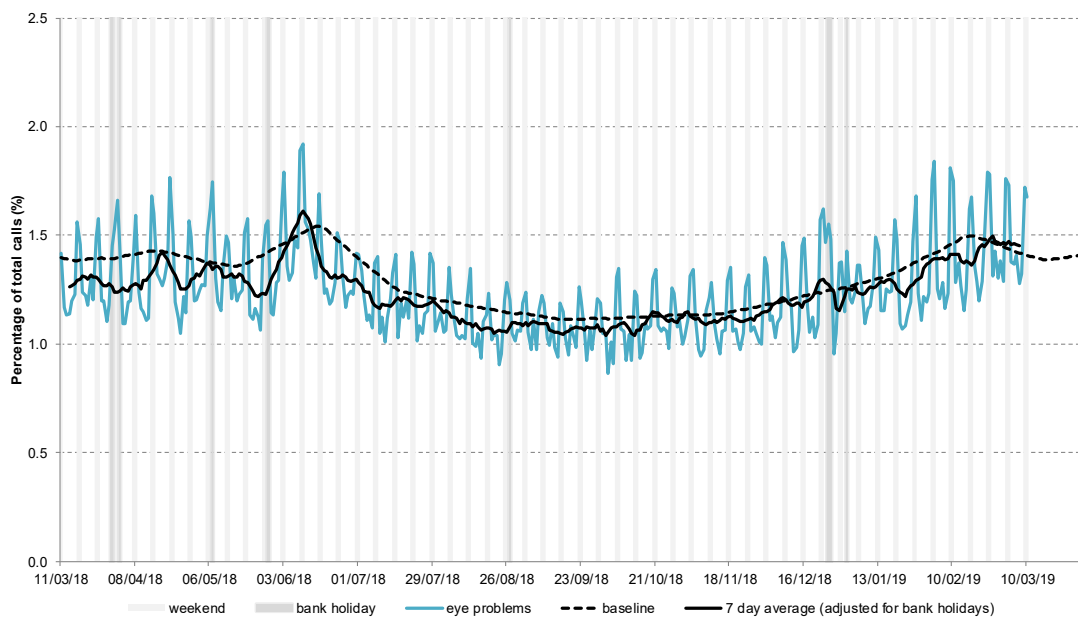

## 8a: Vomiting calls by age group

Vomiting calls as a percentage of total calls within each age group, shown as a 7 day moving average adjusted for bank holidays.

## 9: Eye problems

Daily 'eye problems' calls as a percentage of total calls. Baselines are constructed from historical data since 2013.

**Intentionally blank**

| 12 March 2019 | Year: 2019 | Week: 10 |

**Introduction to charts:**

- Weekends and bank holidays are marked by vertical **grey** lines (bank holidays **darker grey**).
- A 7-day moving average (adjusted for bank holidays) is overlaid on the daily data reported in each chart, unless specified.
- Baselines represent seasonally expected levels of activity and are constructed from historical data since September 2013. They take into account any known substantial changes in data collection, population coverage or reporting practices. Baselines are refreshed using the latest data on a regular basis.
- NHS 111 call data are analysed on a daily basis to identify national and regional trends. A statistical algorithm underpins each system, routinely identifying activity that has increased significantly or is statistically significantly high for the time of year. Results from these daily analyses are assessed by the ReSST, along with analysis by age group, and anything deemed of public health importance is alerted by the team.

---

**Moving Epidemic Method (MEM):**

- During winter 2018/19 we are presenting Moving Epidemic Method (MEM) influenza thresholds on selected indicators.
- The moving epidemic method or MEM is a standard methodology used for setting influenza thresholds across many European nations.[1]
- MEM is used for NHS 111 cold/flu thresholds at a national level.
- **MEM thresholds should be interpreted using 7 day moving averages rather than daily data.**
- MEM thresholds currently use five years of historic data (2013-2018). The thresholds are re-calculated every year.
- 'Pre-epidemic thresholds' are used alongside other surveillance systems to identify the start of influenza circulating in the community.
- 40%, 95% and 97.5% intensity thresholds are used to identify when influenza activity moves from low to medium, high or very high.
