Why work with us

At CCS, we can help you on your journey to creating a smart environment. Enhancing your traditional local networks and services through the use of digital and telecommunication technologies can transform the way your citizens conduct their day-to-day lives, helping them to make more informed decisions.

We know that when it comes to smart cities, effective collaboration is essential to ensure that resources are being used as efficiently as possible, that's why we want to work with you to help you identify the best products and services for your local area.

What's on offer

Traffic Management Technology

The Traffic Management Technology 2 (TMT2) framework gives you access to transport technology products, solutions and professional services. Our extensive range of services includes sustainable transport infrastructure, speed enforcement and smart traffic management. We also provide a dynamic catalogue to help you buy commodity products and services easily.

Smart Energy Cities

The Smart Energy Cities framework will give you access to intelligent energy management technologies for the public sector. The framework will go live in autumn 2019.

We are looking to include a range of products including electric vehicle charging points, smart lighting, smart metering and sensors, demand side response, building energy management systems, heating and cooling solutions, and centralised control systems.

The solution will incorporate both buildings and the wider landscape environment, prioritising energy management of existing energy using and generating assets whilst aiming to offer a holistic 'smart' service to customers.

Smart Facilities Management

The FM Marketplace framework can provide access to innovative solutions for the delivery and management of facilities management services in your office, institutional, commercial or residential properties. Additionally the next phase of the framework will provide access to technical solutions that will allow real-time monitoring and data collection on the performance of mechanical & electrical assets, environmental conditions (temperature/CO2/lighting), room/desk usage and external factors such as local weather and travel. The framework is also supported by the Estates Professional Services, Fit Out and Project Management and Full Design Team Services frameworks which will enable the development and delivery of your smart strategies.

Travel & Venue Solutions

Within our travel category we have ensured that all our suppliers on the current Public Sector Travel and Venue Solutions framework meet our technology specifications to deliver the latest traveller technology. The future of travel will be driven by multi-modal journeys and data that can offer intuitive, personalised and seamless experiences. By facilitating the collection and sharing of that data, in a secure environment, our suppliers are required to deliver the latest app, voice and indispensable digital services to deliver an enhanced traveller experience. The travel category are leading the way in delivering a choice of buying solutions via a single sign digital platform.

Vehicle Solutions

We offer a number of commercial arrangements for all your electric (EV) and ultra low emission vehicle (ULEV) needs as part of your total mobility solution.

Within our travel category, the current Vehicle Hire framework and upcoming Public Sector Vehicle Hire Solutions framework support access to both pure EVs and ULEVs, as well as car share options as part of your total vehicle hire solution.

A range of regional and national taxi and coach passenger transport services will be able to be obtained through our upcoming Public Sector Passenger Transport Solutions Dynamic Purchasing System (DPS). This DPS will give customers access to a number of suppliers who are utilising technology as part of their services, to provide smarter booking processes and faster routes to market. This includes technologies such as geolocation tracking via mobile apps through to digital hubs allowing clear visibility of trip activity, automated billing, expensing and reporting.

The Vehicle Purchase and Vehicle Lease and Fleet Management frameworks support access to all major brands of both pure EVs and ULEVs. In addition, the Vehicle Lease and Fleet Management framework offers a wide range of fleet management services including fleet consultancy to support and help shape EV and ULEV opportunities within individual customer fleet strategies.

Post production vehicle conversions can be obtained via the DPS for Vehicle Conversions. Our Vehicle Telematics framework can also help customers gain insight into their fleet utilisation, potentially telling them where EVs may be most appropriate.

Vehicle Lease, Fleet Management and Flexible Rental Solutions will be launched in spring 2019, offering an improved scope of services to support your total fleet solution needs.

Public Sector Resourcing

Public Sector Resourcing provides a fully managed end-to-end service for all your temporary worker and contractors needs so you can employ the industry specialists you may require to help you on your way to creating a smart environment. From workforce planning to onboarding and vetting our strategic partner will guide you through the recruitment process. Key issues such as agency worker regulations and off-payroll working in the public sector (IR35) are covered for you, and fixed rates ensure simplified pricing.
