Syndromic Surveillance System: England

08 May 2019		Year:	2019	Week: 18
In This Issue:	Key messages		Data f	to: 06 May 2019
Key messages.				-
Syndromic indicators at a glance.				
Data summary.	Nothing new to report during week 18.			
Indicators by syndrome.				
Total calls.				
Cold/flu.				
Fever.				
Cough.				
Difficulty Breathing.				
Sore throat.				
Diarrhoea.				
Vomiting.				

Syndromic indicators at a glance:

Indicator	Trend	Level
Cold/flu	decreasing	pre-epidemic threshold*
Fever	no trend	below baseline levels
Cough	decreasing	below baseline levels
Difficulty breathing	decreasing	below baseline levels
Sore throat	decreasing	below baseline levels
Diarrhoea	decreasing	below baseline levels
Vomiting	no trend	below baseline levels
Eye problems	no trend	similar to baseline levels

* Moving Epidemic Method (MEM) influenza activity threshold (see notes)

Data summary:

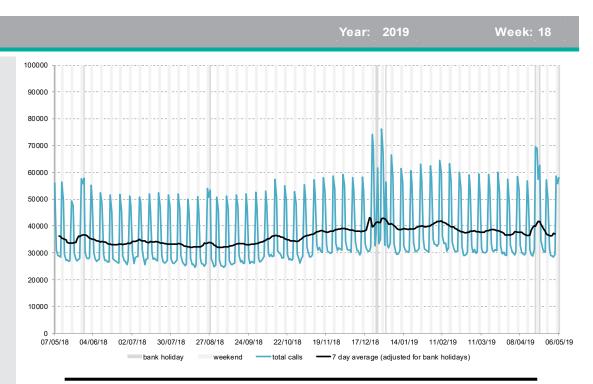

Year	Week	Total calls
2019	18	287,949

WW Public Health England

08 May 2019

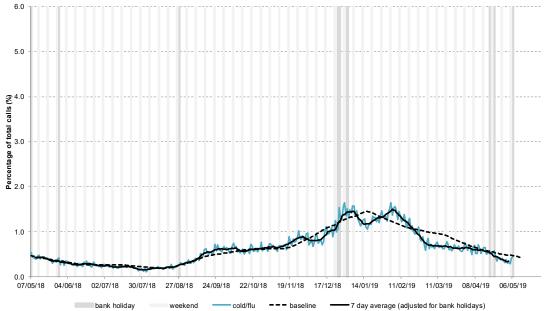

1: Total calls.

The total number of syndromic calls recorded each day by NHS 111.

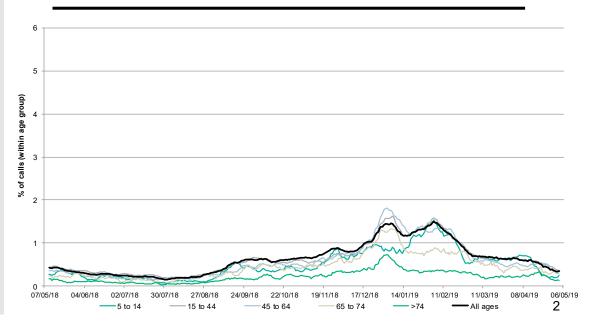

2: Cold/flu

Daily 'cold/flu' calls as a percentage of total calls. Baselines are constructed from historical data since 2013.

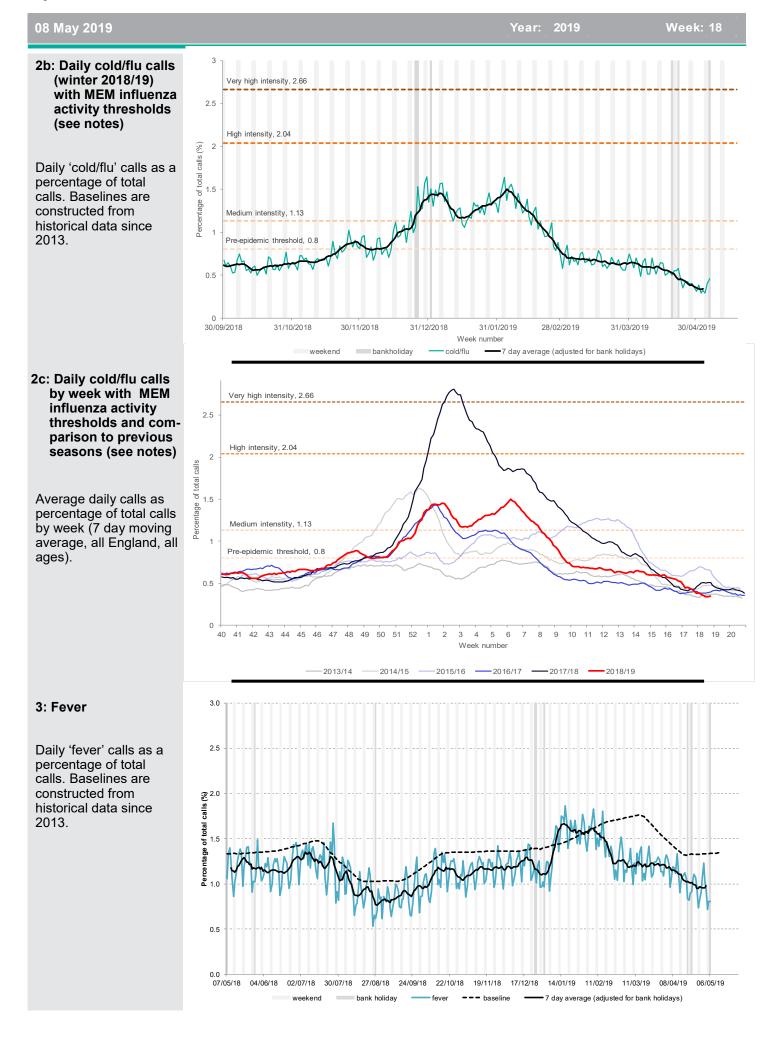

2a: Cold/flu by age group

Cold/flu calls as a percentage of total calls within each age group, shown as a 7 day moving average adjusted for bank holidays. Age groups below 5 years old not shown.

With Public Health England

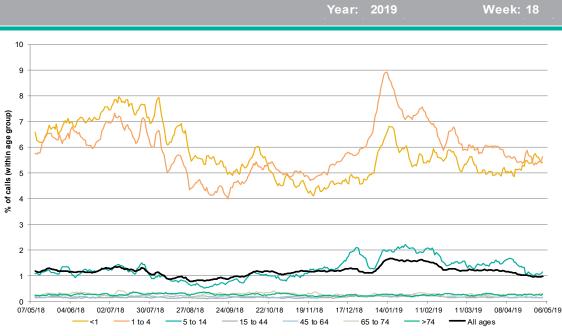

08 May 2019

Remote Health Advice

Fever calls as a percentage of total calls within each age group, shown as a 7 day moving average adjusted for bank holidays.

Intentionally blank

Intentionally blank

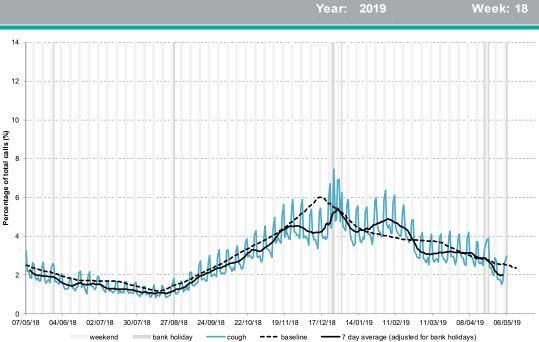

08 May 2019

4: Cough

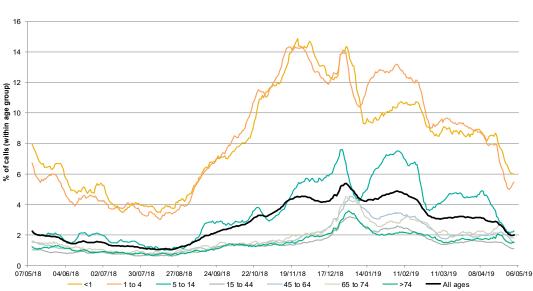

Daily 'cough' calls as a percentage of total calls. Baselines are constructed from historical data since 2013.

4a: Cough calls by age group

Cough calls as a percentage of total calls within each age group, shown as a 7 day moving average adjusted for bank holidays.

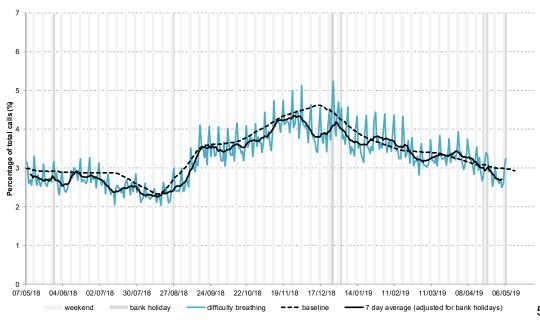

Remote Health Advice

5: Difficulty breathing

Daily 'difficulty breathing' calls as a percentage of total calls. Baselines are constructed from historical data since 2013.

WW Public Health England

08 May 2019

Remote Health Advice

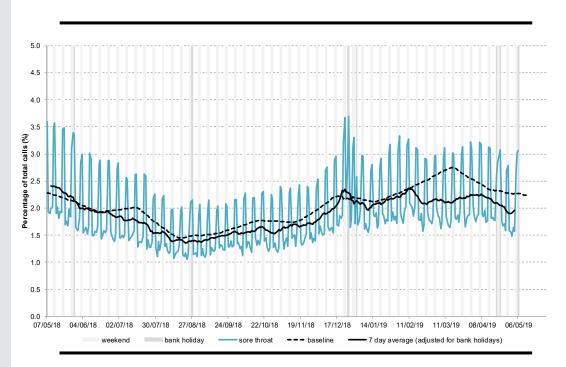

Difficulty breathing calls as a percentage of total calls within each age group, shown as a 7 day moving average adjusted for bank holidays.

6: Sore throat

Daily 'sore throat' calls as a percentage of total calls. Baselines are constructed from historical data since 2013.

Intentionally blank

2040

08 May 2019

7. Diarrhoea

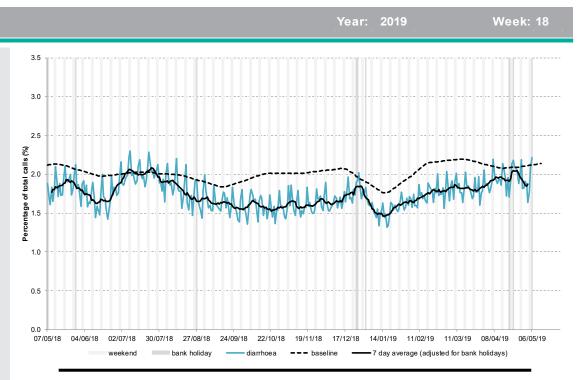

Daily 'diarrhoea' calls as a percentage of total calls. Baselines are constructed from historical data since 2013.

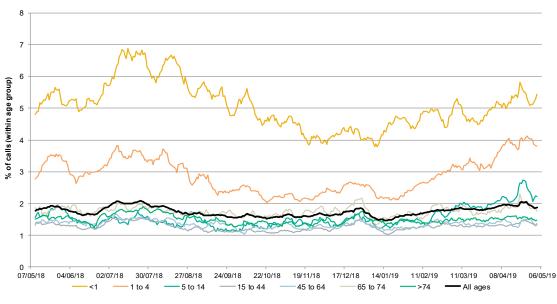

7a: Diarrhoea calls by age group

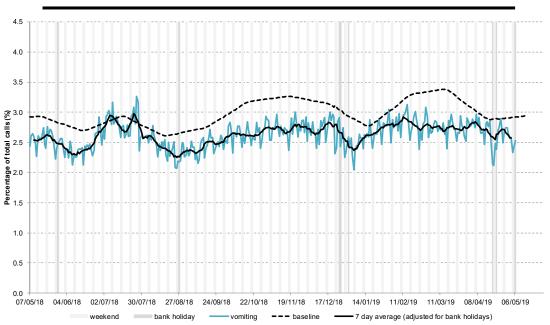

Daily 'diarrhoea' calls as a percentage of total calls. Baselines are constructed from historical data since 2013.

Daily 'vomiting' calls as a percentage of total calls. Baselines are constructed from historical data since 2013.

WW Public Health England

age group

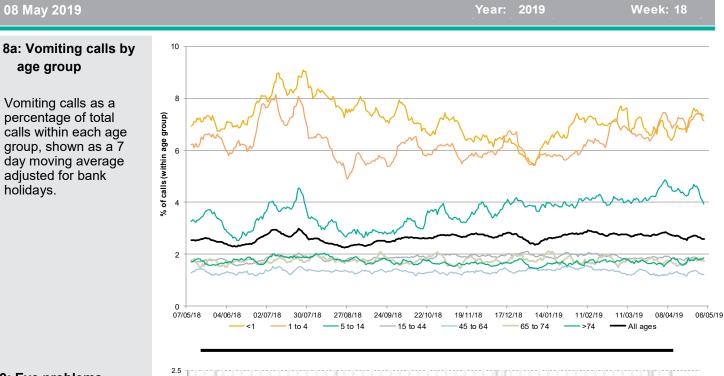

Vomiting calls as a percentage of total

adjusted for bank

holidays.

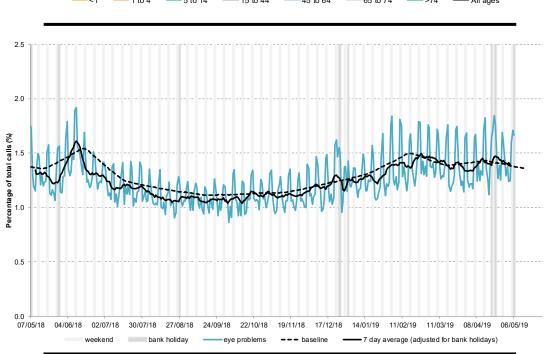

calls within each age group, shown as a 7 day moving average

Remote Health Advice

9: Eye problems

Daily 'eye problems' calls as a percentage of total calls. Baselines are constructed from historical data since 2013.

Intentionally blank

08 May 2019	Year: 2019 Week: 18
Introduction to charts:	 Weekends and bank holidays are marked by vertical grey lines (bank holidays darker grey). A 7-day moving average (adjusted for bank holidays) is overlaid on the daily data reported in each chart, unless specified. Baselines represent seasonally expected levels of activity and are constructed from historical data since September 2013. They take into account any known substantial changes in data collection, population coverage or reporting practices. Baselines are refreshed using the latest data on a regular basis. NHS 111 call data are analysed on a daily basis to identify national and regional trends. A statistical algorithm underpins each system, routinely identifying activity that has increased significantly or is statistically significantly high for the time of year. Results from these daily analyses are assessed by the ReSST, along with analysis by age group, and anything deemed of public health importance is alerted by the team.
Moving Epidemic Method (MEM):	 During winter 2018/19 we are presenting Moving Epidemic Method (MEM) influenza thresholds on selected indicators. The moving epidemic method or MEM is a standard methodology used for setting influenza thresholds across many European nations.¹ MEM is used for NHS 111 cold/flu thresholds at a national level. MEM thresholds should be interpreted using 7 day moving averages rather than daily data. MEM thresholds currently use five years of historic data (2013-2018). The thresholds are re-calculated every year. 'Pre-epidemic thresholds' are used alongside other surveillance systems to identify the start of influenza circulating in the community. 40%, 95% and 97.5% intensity thresholds are used to identify when influenza activity moves from low to medium, high or very high.
Notes and further information:	 Further information about NHS 111 can be found at: http://www.nhs.uk/NHSEngland/AboutNHSservices/ Emergencyandurgentcareservices/Pages/NHS-111.aspx The Remote Health Advice Syndromic Surveillance bulletin can also be downloaded from the PHE Real-time Syndromic Surveillance website which also contains more information about syndromic surveillance: https://www.gov.uk/government/collections/syndromic-surveillance-systems- and-analyses
Acknowledgements:	We are grateful to NHS 111 and to NHS Digital for their assistance and support in providing the anonymised call data that underpin the Remote Health Advice Syndromic Surveillance System.
