------------	---

1 Introduction

Data on energy use by large industrial and commercial sites (also known as Point Sources) are collected and compiled within the National Atmospheric Emissions Inventory (NAEI). These data include fuel consumption from all Industrial Emissions Directive (IED) Annex I installations¹ regulated in the UK, all installations covered by the EU Emissions Trading Scheme (EU-ETS) and other sites that are significant sources of air pollution. The method used to compile these estimates is documented in a report on Local and Regional CO₂ emission estimates (Ricardo, 2017)².

The energy used by smaller industrial and commercial sites is significant in terms of overall energy consumption from the 'other industrial', commercial and public sectors in the UK (where 'other industry' excludes large energy intensive industrial processes such as iron and steel, cement etc.). These smaller facilities represent about 62% of CO₂ emissions in 2015. However, energy consumption data for these sites are not available in a consistent format across the UK. Therefore, proxy data on employment and energy use are used to estimate energy use and emissions at these locations.

This report describes the methods used to estimate the energy use at the UK level by the smaller industrial, commercial and public sectors and to model the distribution of energy use across the UK at 1x1km resolution. The methods described in this report replace those previously used for the NAEI. The approach taken is similar to that used previously: combining employment data from the Inter-Departmental Business Register database and National energy statistics by industrial and commercial sector.

The outputs of this work are used in the generation of detailed 1x1km resolution emission maps for air quality and climate change gases as well as for other spatially disaggregated NAEI outputs such as Local and Regional CO₂ statistics, Devolved Administration Inventories and sub-national energy statistics for solid and liquid fuels³

¹ Installations regulated under UK legislation implementing Directive 2010/75/EU (Chapter II and Annex I) on industrial emissions (IED)

³ <https://www.gov.uk/government/collections/sub-national-consumption-of-other-fuels>

2 Data sources

This section of the report describes the data sets used as inputs to the modelling process for energy use from industrial, commercial and public sector facilities that are not included in the NAEI point source database.

2.1 Employment data

The Inter-Departmental Business Register⁴ (IDBR) database provides detailed data on number of employees at each registered UK business entity. This database has 2.1 million businesses listed and covers approximately 99% of economic activity across the UK.

An extract from the IDBR was obtained from the Office for National Statistics (ONS), with the data fields as shown in Table 1. The grid reference attribute was used to aggregate total numbers of employees for each 1km grid square by Standard Industry Classification (SIC) sector.

Table 1 Information held on the IDBR³ for each business

Field	Description
Local Unit	Local Unit Reference Code
Enterprise	Enterprise Reference Code
Reporting Unit	Reporting Unit Reference Code
Name	Local Unit Name
Address	Local Unit Address
Postcode	Local Unit Postcode
Employment	Total number of employees figure plus working proprietors
Employees	Total number of people employed, excluding proprietors
SIC2003	UK Standard Industry Classification 2003
SIC2007	UK Standard Industry Classification 2007
GOR	Regions (Former Government Offices for the Regions)
Grid Reference	Locations on map using Cartesian coordinates

The 2007 Standard Industry Classification⁵ (SIC) is used to assign a 5-digit code of economic activity type to each business. Appendix 1 shows higher-level 2-digit activity Divisions of the SIC, which are used for this study. The business entities are classified into Local units and Enterprise Units.

The map in Figure 1 below presents a small sample of employment data from the IDBR, showing employment density variations within a mixed rural and urban area of South Oxfordshire.

⁴ <http://www.ons.gov.uk/ons/about-ons/products-and-services/idbr/index.html>

⁵ <https://www.ons.gov.uk/methodology/classificationsandstandards/ukstandardindustrialclassificationofeconomicactivities/uksic2007>

Figure 1 Illustration of a sample of the IDBR site locations

2.2 Energy statistics

Sector specific fuel use statistics are available on an annual basis from BEIS via the Energy Consumption in the UK (ECUK) publication (BEIS, 2017)⁶. This study makes heavy use of the Industrial data tables, and Service sector data tables.

The Industrial and Service sector data tables are compiled from the Purchases Inquiry (PI) survey, a sub-survey of the ONS's Annual Business Inquiry. As part of this survey a sample of 6,000 businesses is conducted to collect information on the monetary value of purchases of fuel and electricity. The ECUK User Guide (BEIS, 2016) explains how the survey data were aggregated to cover all businesses in each sector.

Table 2 below present a breakdown of the fuel consumption in industrial sectors in 2016 as provided from the ECUK tables described above. A time-series of statistics was produced using the following ECUK tables:

- Industrial final energy consumption at two digit SIC2007 level by fuel type, for the years 2009-2016⁷
- Service sector final energy consumption by sub-sector, for the years 2005-2016

⁶ <https://www.gov.uk/government/statistics/energy-consumption-in-the-uk>

⁷ Pre-2009 ECUK tables were only available at SIC2003 level

Table 2 Industrial energy consumption by fuel type in 2012 (thousand tonnes of oil equivalent) based on ECUK⁸ Table 4.03⁹

SIC(2007) codes	Description	Coal	Manufactured fuel	LPG	Gas oil	Fuel oil	Natural gas	Electricity
08	Other mining and quarrying	-	-	-	140	6	74	114
10	Manufacture of food products	25	-	29	18	60	1,369	736
11	Manufacture of beverages	6	-	7	4	14	328	176
12	Manufacture of tobacco products	-	-	-	-	-	7	11
13	Manufacture of textiles	37	-	-	25	-	232	147
14	Manufacture of wearing apparel	11	-	-	19	-	110	64
15	Manufacture of leather and related products	-	-	-	-	-	14	16
16	Manufacture of wood and of products of wood and cork, except furniture; manufacture of articles of straw and plaiting materials	-	-	-	9	-	126	220
17	Manufacture of paper and paper products	75	-	-	28	-	607	587
18	Printing and publishing of recorded media and other publishing activities	-	-	-	4	-	109	324
19	Manufacture of coke and refined petroleum products	1,100	1,072	-	-	240	118	399
20	Manufacture of chemicals and chemical products	38	-	-	82	24	1,527	1,203
21	Manufacture of basic pharmaceutical products and pharmaceutical preparations	4	-	-	9	2	159	125
22	Manufacture of rubber and plastic products	247	-	-	7	-	290	898
23	Manufacture of other non-metallic mineral products	542	-	-	46	-	933	403
24	Manufacture of basic metals	35	316	1	-	3	519	615
25	Manufacture of fabricated metal products, except machinery and equipment	8	-	-	-	-	326	321
26	Manufacture of computer, electronic and optical products	3	-	-	1	-	130	308
27	Manufacture of electrical equipment	-	-	-	-	-	162	194
28	Manufacture of machinery and equipment n.e.c.	-	-	-	-	-	196	216
29	Manufacture of motor vehicles, trailers and semi-trailers	37	-	-	105	2	554	254

⁹ Bioenergy & Waste consumption is not shown as all is allocated to unclassified sectors, and therefore not used in this study

SIC(2007) codes	Description	Coal	Manufactured fuel	LPG	Gas oil	Fuel oil	Natural gas	Electricity
30	Manufacture of other transport equipment	-	-	-	63	4	229	148
31	Manufacture of furniture	-	-	-	1	-	48	84
32	Other manufacturing	-	-	-	2	-	65	113
35	Electricity, gas, steam and air conditioning supply	-	-	-	-	-	-	-
36	Water collection, treatment and supply	-	-	-	2	-	19	451
38	Waste collection, treatment and disposal activities; materials recovery	-	-	-	15	-	13	52
42	Civil engineering/construction	4	-	-	186	7	278	115

2.3 Point sources

Data on location specific (point source) fuel consumption are collated in the NAEI point source database. They are compiled from data for regulated processes reported in the Environment Agency's Pollution Inventory, the Scottish Pollution Release Inventory (SPRI), the Northern Ireland Environment Agency Pollution Inventory, the EU-ETS and from other data obtained by the NAEI. The Local and Regional CO₂ technical report¹⁰ describes in more detail the methodology used to calculate fuel use at point sources.

2.4 Gas consumption data for England, Wales, Scotland and Northern Ireland

Data on gas consumption and the distribution of gas consumption for industry and commerce is available from BEIS within the sub-national gas consumption data collection¹¹. For this exercise, gas consumption data at Middle Super Output Areas (MSOA) for England and Wales and Intermediate Geography Zones (IGZ) for Scotland have been used (hereafter both datasets will be referred to as the MSOA gas data as they are in effect equivalent statistical geographies¹²).

Furthermore, a dataset of 1x1km resolution gas consumption by non-domestic users was obtained from BEIS for the purpose of this modelling. This data set enabled the production of a map of the extent of the gas network (presence or absence of gas supply) and was used as an indicator for gas availability to industry and commercial sites.

2.5 Off-gas postcodes

In order to identify sites with no gas connection even though they are within areas of gas availability, Xoserve Off-Gas Postcode dataset¹³ has been used to filter the businesses which may be using a fuel other than natural gas.

2.6 Employment time-series

A time-series of employment activity was back-calculated with the use of Business Register data and Employment Survey (BRES) annual employment estimates¹⁴. The time-series was calculated at a regional level for each Broad Industry Group (SIC2007).

3 Analysis

This section describes the methods used to analyse and combine the datasets to model the distribution of energy consumption across the UK by fuel type. Estimates of gas consumption were compared with and corrected against detailed metered data at Local Authority and MSOA level. These were only produced for one year at 1x1km (to support the air quality and greenhouse gas maps for the latest inventory). However, estimates of consumption of other fuels (oils and coal) are more uncertain because there are no consistent data sets on actual consumption of these fuels. For these datasets additional analysis steps were made, in order to create time-series for BEIS's Local Authority level statistics.

3.1 Process flow diagrams

The following pages graphically summarise the data flows and modelling processes implemented for each fuel type considered.

Figure 2 Legend for the process flow diagrams below

Figure 3 Non-domestic gas use allocation process

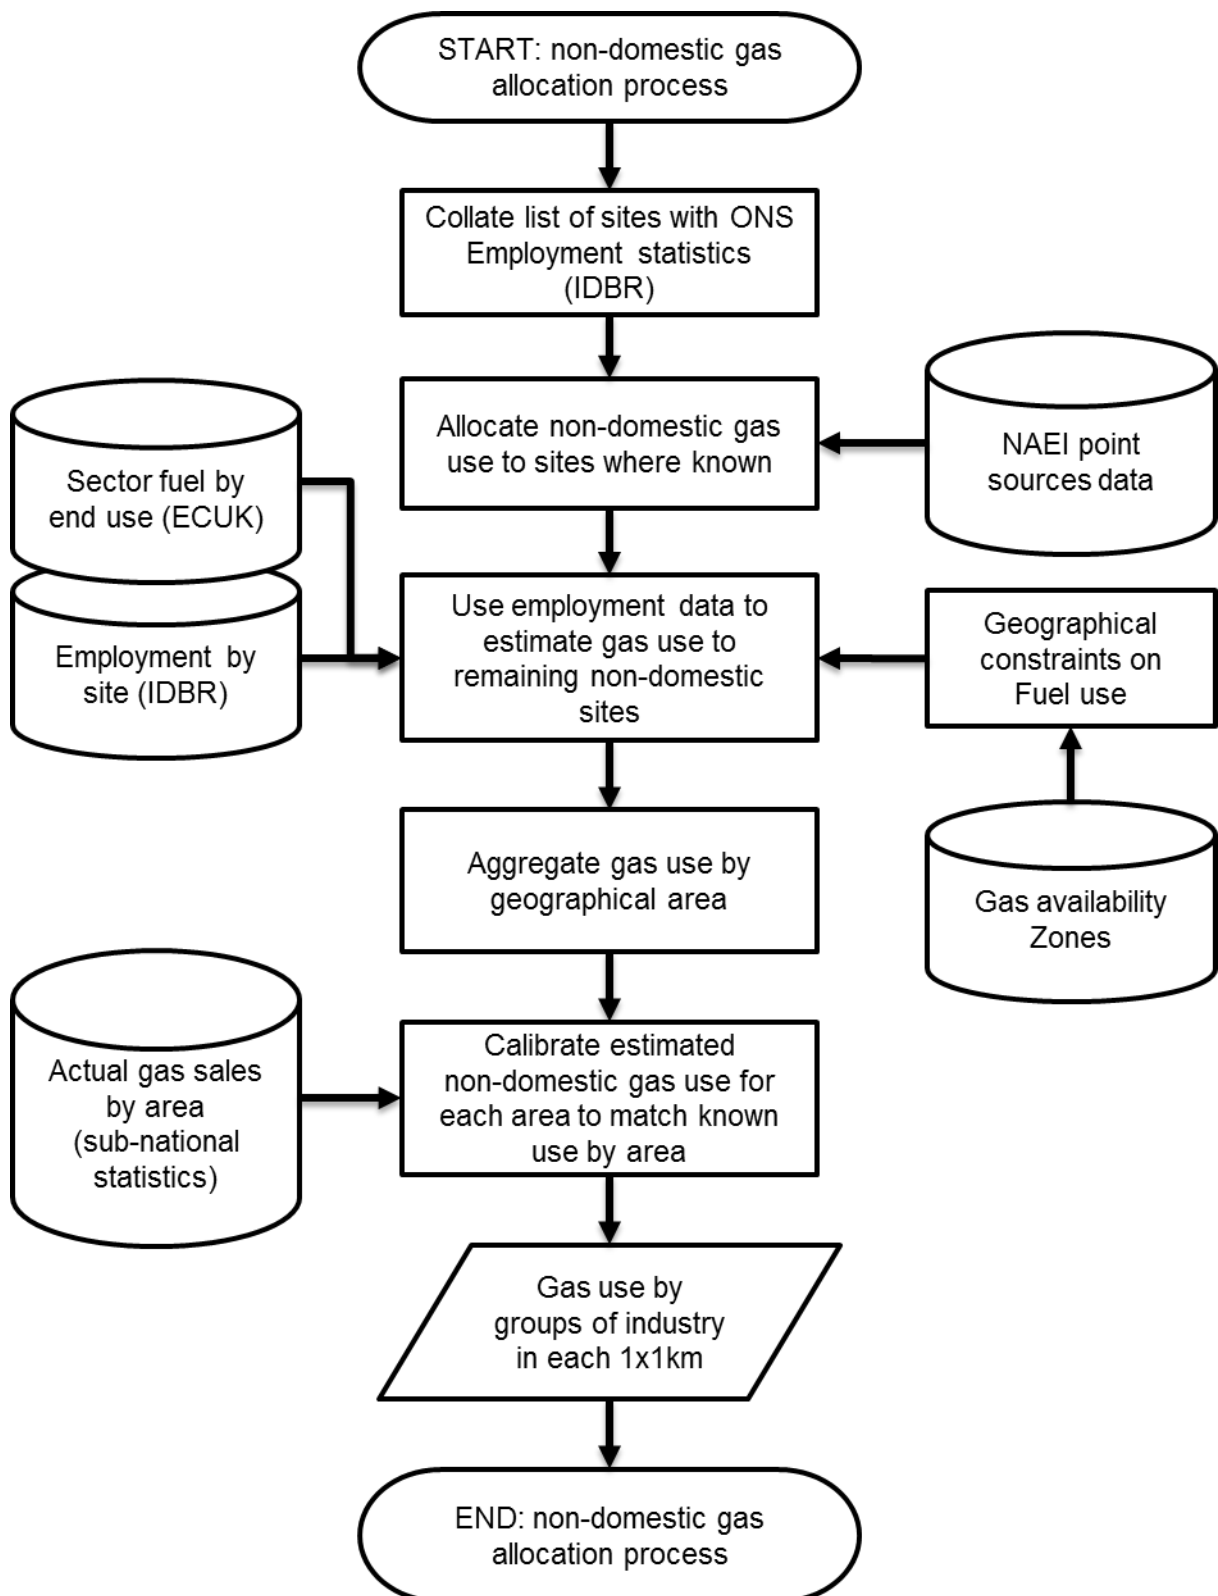

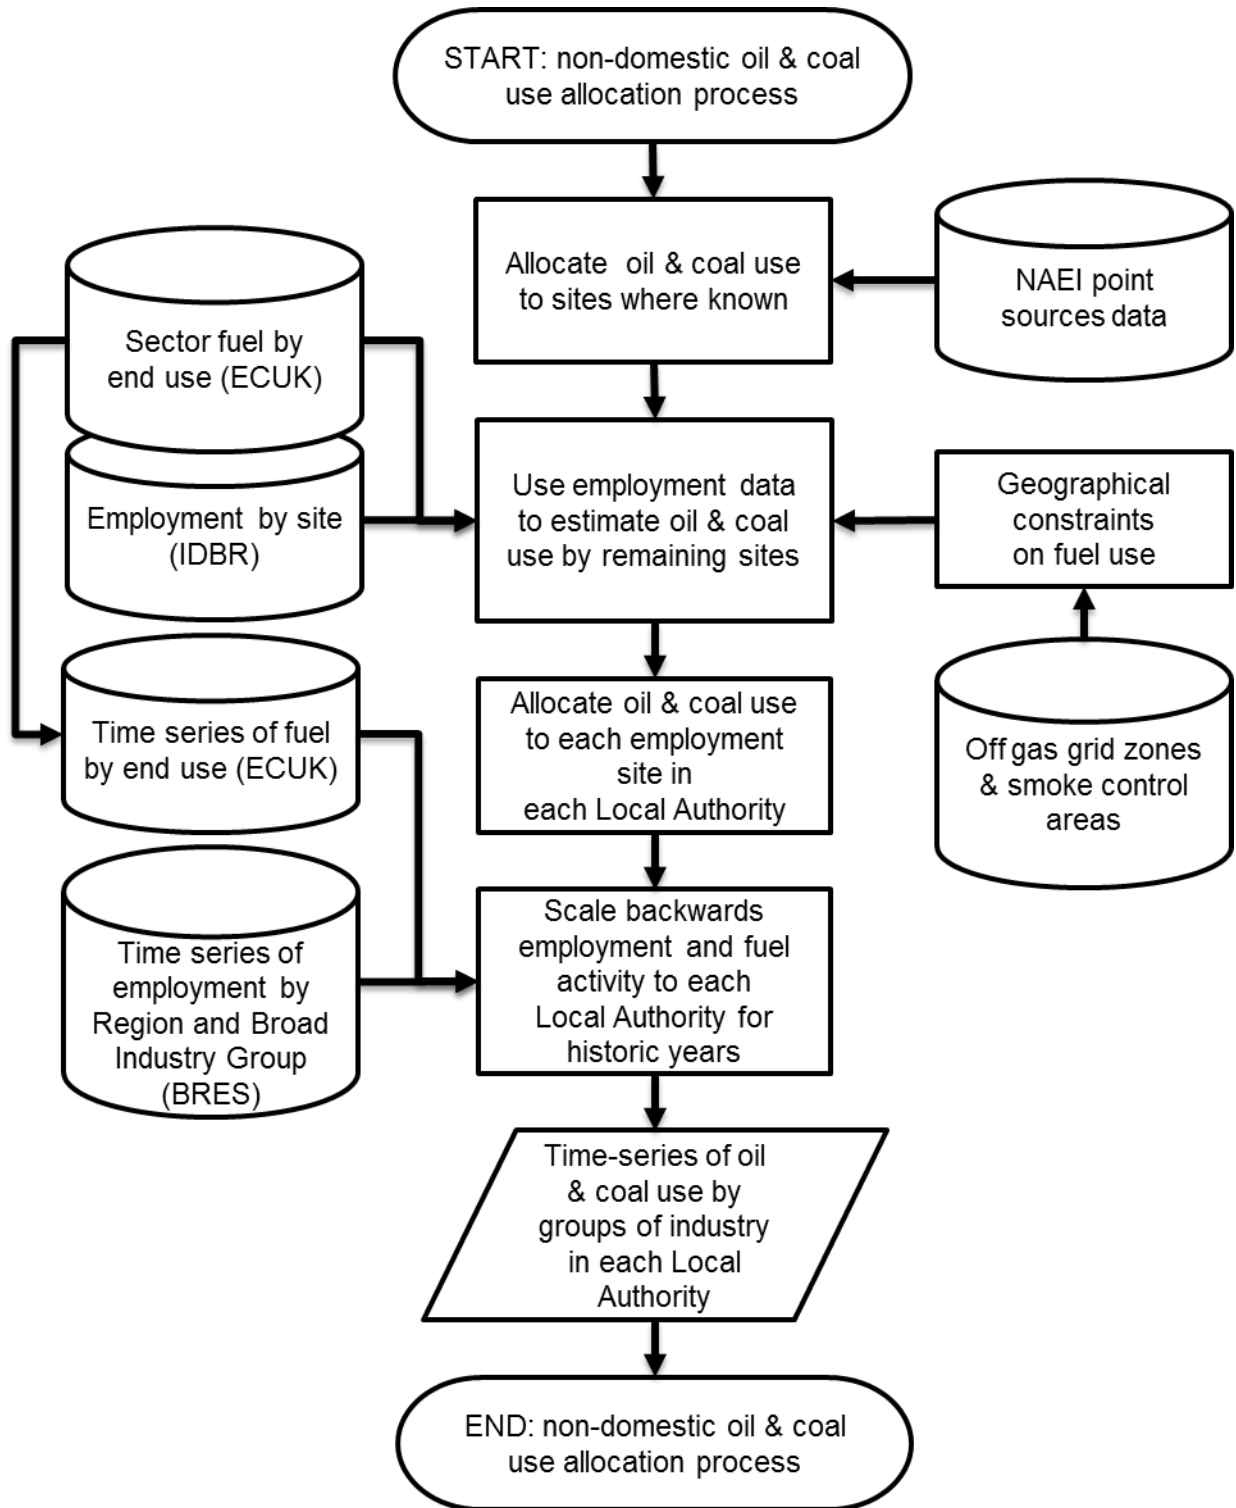

Figure 4 Non-domestic oil and coal use allocation process

3.2 Matching point sources to employment data

Overlaps between the NAEI point source database and the IDBR database were identified and flagged. This was necessary to prevent double counting of energy consumption at the national level and at the detailed spatial level.

To enable data matching, the NAEI point sources were allocated to SIC codes. The total energy consumption associated with these point sources were then calculated at 2-digit SIC code level using bottom-up fuel use estimates in the NAEI point source database.

Subsequently, the locations of each of the NAEI point sources were matched to records in the IDBR using information in the location organisation name, SIC code and postcode on both datasets. This matching allowed employment records to be removed from the modelling to minimise double counting.

3.3 Matching NAEI sectors to SIC codes

Allocation of SIC codes in the energy and employment datasets to NAEI sectors enabled the aggregation of fuel use estimates to NAEI sectors and a comparison of energy consumption totals. This procedure also facilitated the generation of maps that were consistent with NAEI sector boundaries for distributing emissions data. The two main NAEI sectors relevant to the fuel use mapping are 'Other industry' (i.e. not the largest industrial emitters such as iron and steel or the cement industry) and Commercial and Public sector.

3.4 Calculation of non-point source residential energy consumption

The comparison of energy data grouped by SIC code and NAEI sector provided an estimate of the total residual energy consumption, i.e. the energy not used at the identified sites. This residual energy was identified for re-distribution using the employment data.

The comparison and calculation of residual energy at this level supported the highest level of cross-checks across emissions subsectors to be retained for energy consumption mapping.

3.5 Energy intensity factors

Estimates of fuel intensity per employee were used to distribute residual energy by sector across the IDBR employment sites and create maps of fuel use. Total UK employee numbers in the IDBR were aggregated to an equivalent sector level to the BEIS energy statistics which is at SIC 2007 2-digit code level for industrial sectors but at a higher level for commercial and service sectors. The total numbers of employees by SIC code (4, 3, or 2-digit codes as appropriate) were then calculated from the IDBR database, excluding the allocated sites identified in **section 3.2**. This calculation also took account of the geographical areas appropriate to the relevant fuels.

The total residual energy by SIC code (as described above) and total number of employees for the same codes were then used to derive to a national average energy intensity factor per employee for each fuel type for each sector for these residual energy locations.

The fuel intensity factors were then applied across the employment distribution from the IDBR to create maps of fuel use by industry sector.

3.6 Gas consumption to adjust the distribution of gas predicted by the employment and energy intensity data

For gas consumption estimates model outputs are adjusted using real gas consumption data using an iterative approach of comparison and adjustment.

The BEIS and 1x1km gas datasets were compared with initial modelled estimates of gas and adjustment factors were calculated to apply to improve the initial estimates and ensure modelled and measures estimates were consistent as far as possible. This correction was possible at the MSOA level for most of locations and at combined MSOAs in other locations owing to different levels of reporting of gas data in the BEIS dataset. The reason for this is the aggregation of MSOA gas consumption across multiple MSOAs to prevent disclosure of sensitive data.

The BEIS dataset does not provide a distribution of gas consumption in Northern Ireland. Data were added using information on gas consumption by industry and commerce at district level from Energy providers (i.e. SSE Airtricity¹⁵, Firmus¹⁶) to adjust the modelled estimates in each Northern Ireland Local Authority.

3.7 Other fuels

The other fuels modelled using this method are coal and oil (with fuel oil and gas oil modelled separately for industrial sectors). The calculations for the distribution of other fuels are simpler than those for gas (but more uncertain) because no metered data exist for these fuels.

Based on expert knowledge of fuel used by industry and businesses the distributions of fuel oil and gas oil have been modified so that consumption is lower per employee in grid squares covered by gas supply through the use of a weighting factor.

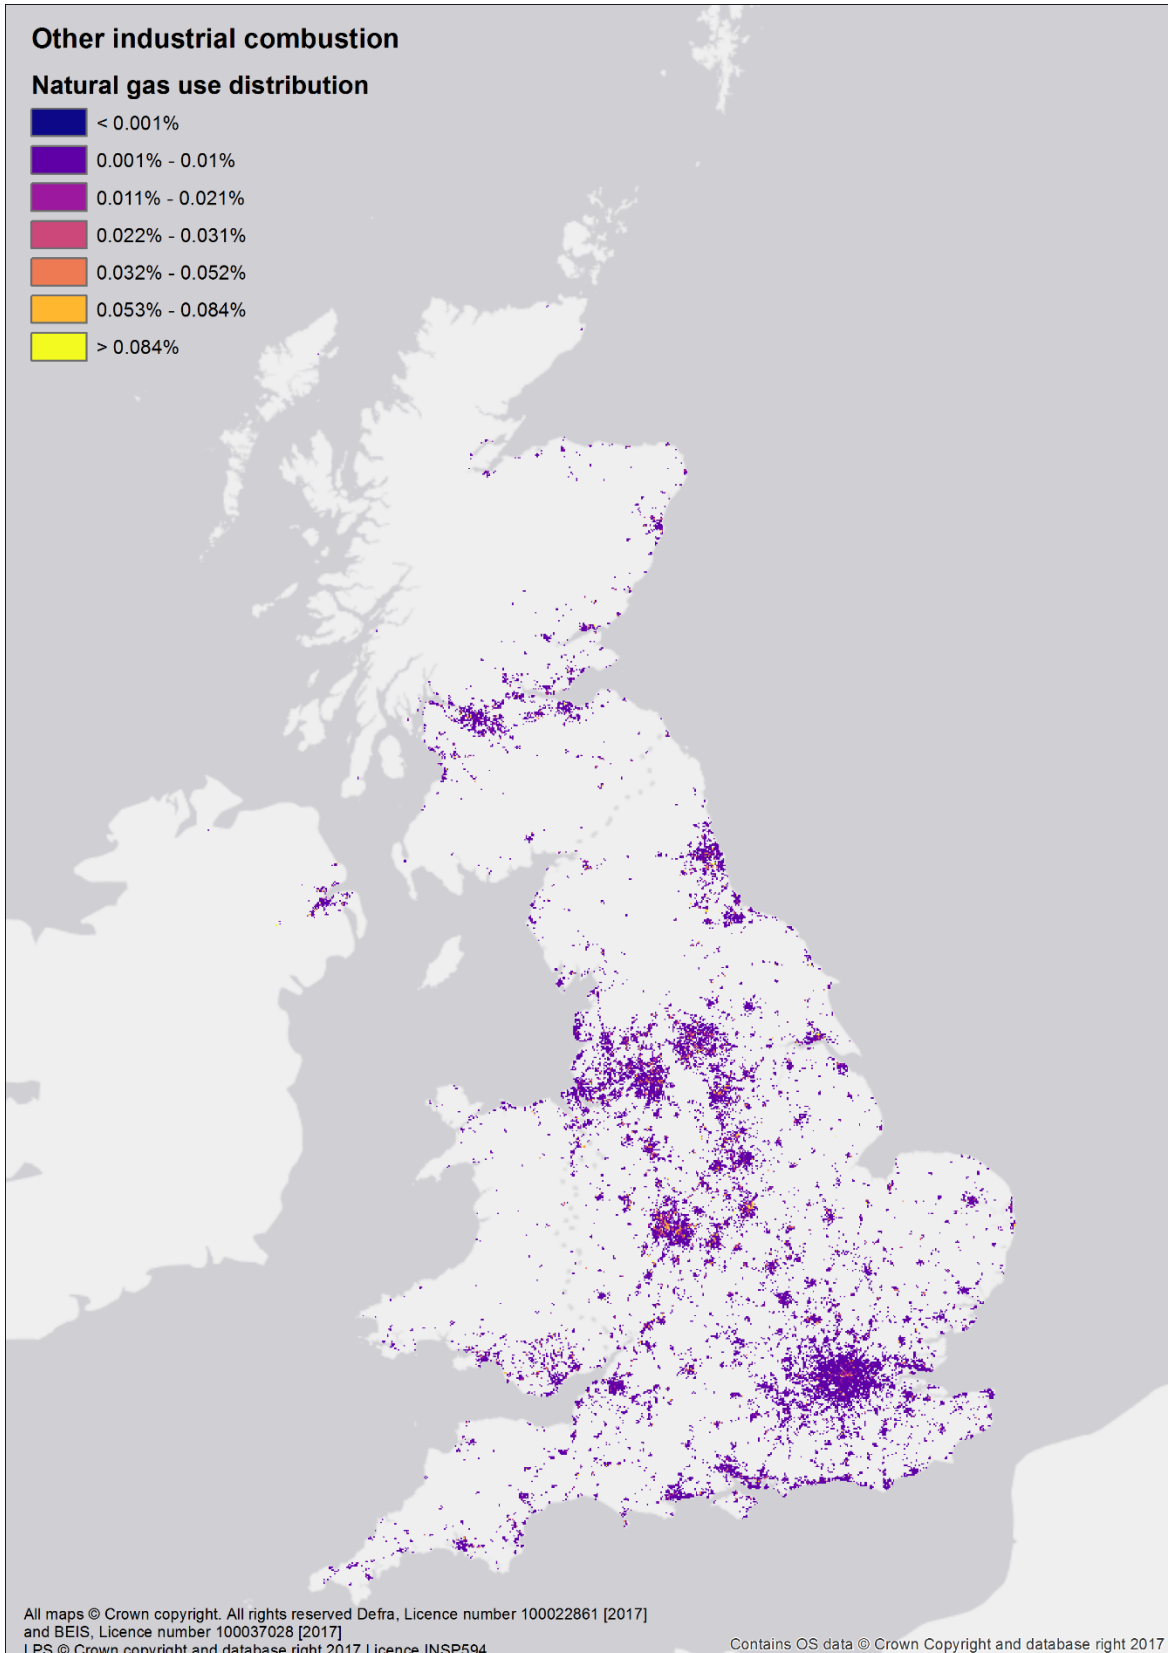

The distribution of coal has also been limited to areas outside large urban areas. This presumption of coal distribution is particularly uncertain, and it is recommended that this should be reviewed for the next mapping exercise.

Appendix 1 - 2-digit Standard Industrial Classification 2007

SIC(2007) codes	Description
01	Crop and animal production, hunting and related service activities
02	Forestry and logging
03	Fishing and aquaculture
05	Mining of coal and lignite
06	Extraction of crude petroleum and natural gas
07	Mining of metal ores
08	Other mining and quarrying
09	Mining support service activities
10	Manufacture of food products
11	Manufacture of beverages
12	Manufacture of tobacco products
13	Manufacture of textiles
14	Manufacture of wearing apparel
15	Manufacture of leather and related products
16	Manufacture of wood and of products of wood and cork, except furniture; manufacture of articles of straw and plaiting materials
17	Manufacture of paper and paper products
18	Printing and reproduction of recorded media
19	Manufacture of coke and refined petroleum products
20	Manufacture of chemicals and chemical products
21	Manufacture of basic pharmaceutical products and pharmaceutical preparations
22	Manufacture of rubber and plastic products
23	Manufacture of other non-metallic mineral products
24	Manufacture of basic metals
25	Manufacture of fabricated metal products, except machinery and equipment
26	Manufacture of computer, electronic and optical products
27	Manufacture of electrical equipment
28	Manufacture of machinery and equipment n.e.c.
29	Manufacture of motor vehicles, trailers and semi-trailers
30	Manufacture of other transport equipment
31	Manufacture of furniture
32	Other manufacturing
33	Repair and installation of machinery and equipment
35	Electricity, gas, steam and air conditioning supply
36	Water collection, treatment and supply
37	Sewerage

Employment based energy consumption mapping in the UK

SIC(2007) codes	Description
38	Waste collection, treatment and disposal activities; materials recovery
39	Remediation activities and other waste management services.
41	Construction of buildings
42	Civil engineering
43	Specialised construction activities
45	Wholesale and retail trade and repair of motor vehicles and motorcycles
46	Wholesale trade, except of motor vehicles and motorcycles
47	Retail trade, except of motor vehicles and motorcycles
49	Land transport and transport via pipelines
50	Water transport
51	Air transport
52	Warehousing and support activities for transportation
53	Postal and courier activities
55	Accommodation
56	Food and beverage service activities
58	Publishing activities
59	Motion picture, video and television programme production, sound recording and music publishing activities
60	Programming and broadcasting activities
61	Telecommunications
62	Computer programming, consultancy and related activities
63	Information service activities
64	Financial service activities, except insurance and pension funding
65	Insurance, reinsurance and pension funding, except compulsory social security
66	Activities auxiliary to financial services and insurance activities
68	Real estate activities
69	Legal and accounting activities
70	Activities of head offices; management consultancy activities
71	Architectural and engineering activities; technical testing and analysis
72	Scientific research and development
73	Advertising and market research
74	Other professional, scientific and technical activities
75	Veterinary activities
77	Rental and leasing activities
78	Employment activities
