

Appendix 1

This document contains a summary of the testing done by APHA to identify specific *Leptospira* serovars from dog samples submitted by private veterinary surgeons. APHA only undertake the tests as requested by Private Veterinary Surgeons (PVS), so this data should not be considered the result of comprehensive screening of all dog samples submitted. Furthermore, these tables do not include results for testing for pools of serovars, as these do not provide specific data on the serovars detected in the samples.

APHA do not collect information about the vaccination status of the animals which were the source of these samples.

TC0447 *L. australis*

Year	Number tested	Number positive
2015	2	2
2016	35	19
