

GP OOHSS

GP Out-of-Hours Surveillance System: England

22 July 2019 Year:2019 Week:29						
In This Issue: Key Messages.	Key messages		Data to:	21 Ju	ly 2019	
Weekly summary. Total contacts. Syndromic indicators.	There was nothing new to report	in week 29.				
Notes and caveats. Further information. Acknowledgements.	A Heat-Health Watch system operates in England from 1 June to 15 September each year. As part of the Heatwave Plan for England, the PHE Real-time Syndromic Surveillance team will be routinely monitoring the public health impact of hot weather using syndromic surveillance data during this period. Heat-health watch level (current reporting week): Level 1 Summer preparedness http://www.metoffice.gov.uk/weather/uk/heathealth/					
			%	%		
Syndromic indicators	Key indicator	No. of contacts	Week 29	Week 28	Trend*	
at a glance:	All OOH contacts, all causes	166,251				
Number of contacts and percentage of Read coded contacts.	Acute respiratory infection	7,072	9.94	10.21	$\mathbf{\Lambda}$	
	Influenza-like illness	48	0.07	0.08	←→	
coded contacts.	Bronchitis/bronchiolitis	46	0.06	0.09	¥	
	Difficulty breathing/wheeze/asthma	1,051	1.48	1.48	\	
	Pharyngitis	70	0.10	0.09	↔	
	Gastroenteritis	2,632	3.70	3.71	↔	
	Diarrhoea	694	0.98	1.05	< → < →	
	Vomiting Myocardial infarction	929 605	1.31 0.85	1.30 0.87	₹7 € →	
	Heatstroke	2	0.00	0.01	4	
	T leats to the	2	0.00	0.01	•	
1: Total out-of-hours	*Trend: reports on the trend seen over pre	vious weeks in the pe	ercentage of	Read coded	contacts.

5: Difficulty breathing/ wheeze/asthma daily contacts.

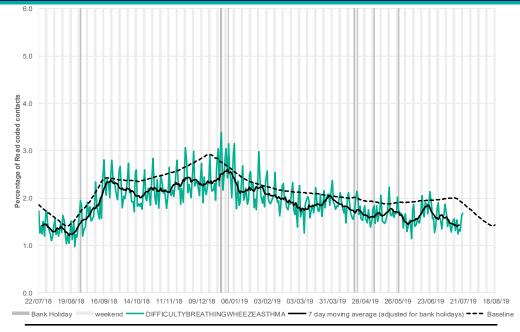

Shown as a percentage of the total contacts with a Read code and as a 7 day average*.

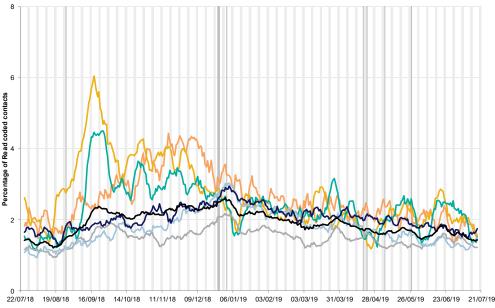

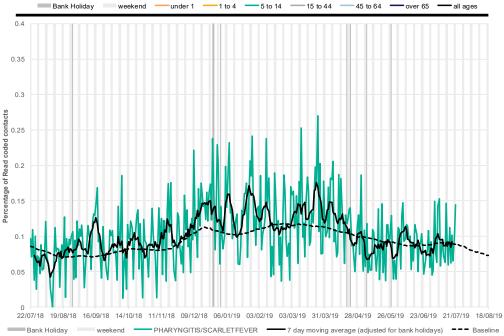

6: Acute pharyngitis and persistent sore throat.

Shown as a percentage of the total contacts with a Read code and as a 7 day average*.

*7-day moving average adjusted for bank holidays.

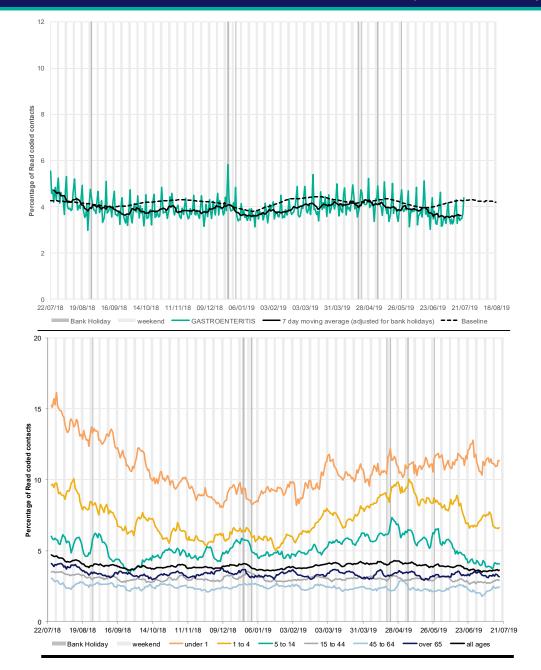

7: Gastroenteritis daily contacts

Shown as a percentage of the total contacts with a Read code and as a 7 day average*.

GP OOHSS

Year:2019 Week:29

*7-day moving average adjusted for bank holidays.

8: Diarrhoea daily contacts.

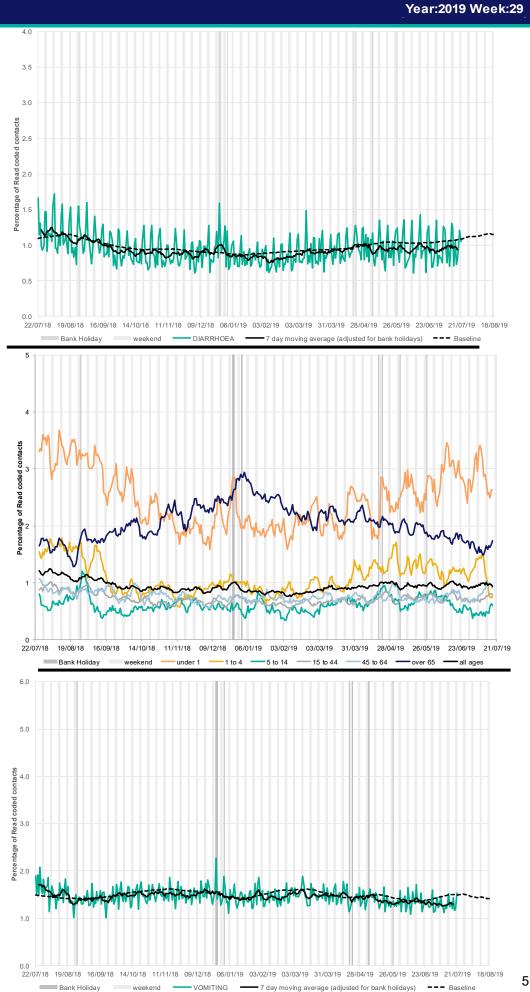

Shown as a percentage of the total contacts with a Read code and as a 7 day average*.

Shown as a percentage of the total contacts with a Read code and as a 7 day average*.

*7-day moving average adjusted for bank holidays.

GP OOHSS

9a: Vomiting daily contacts by age group*.

Shown as a percentage of the total contacts with a Read code and as a 7 day average*.

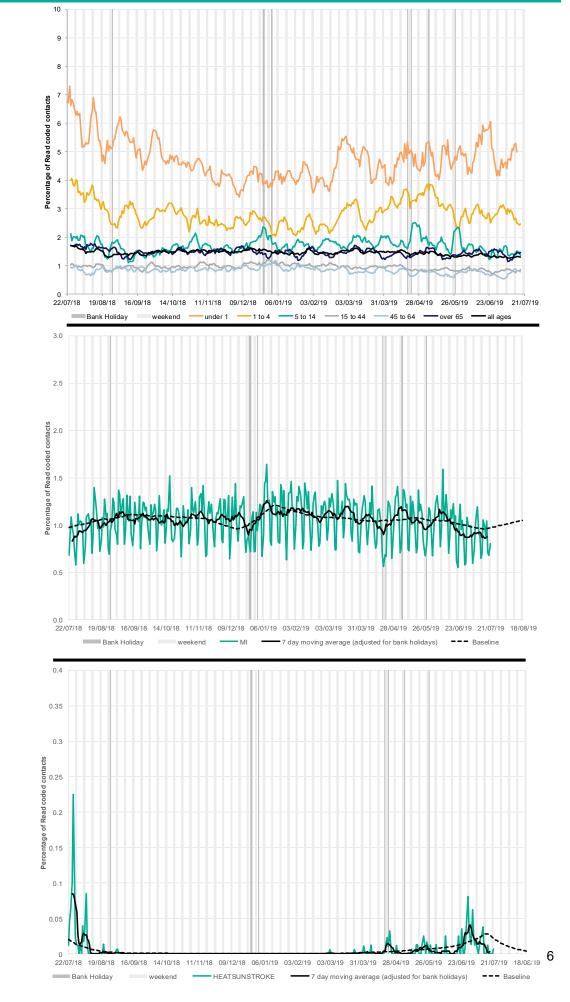

10: Myocardial Infarction daily contacts.

Shown as a percentage of the total contacts with a Read code and as a 7 day average*.

11: Heat stroke daily contacts.

Shown as a percentage of the total contacts with a Read code and as a 7 day average*.

*7-day moving average adjusted for bank holidays.

Notes and caveats:	 This bulletin presents data from the Public Health England (PHE) GP Out -of-hours\Unscheduled Care Surveillance System (GP OOHSS). Fully anonymised data from GP out-of-hours (OOH) and unscheduled care service providers in England are being transferred to the PHE for analysis and interpretation by the PHE Real-time Syndromic Surveillance Team (ReSST). This system supplements existing PHE syndromic surveillance systems by monitoring data on general practitioner consultations outside of routine surgery opening times (evenings, weekends and bank holidays) and unplanned contacts within NHS primary care. The key indicators presented within this bulletin are derived by grouping selected Read coded consultations. GP OOH consultation data are analysed on a daily basis to identify national and regional trends. A statistical algorithm underpins each system, routinely identifying activity that has increased significantly or is statistically significantly high for the time of year. Results from these daily analyses are assessed by the ReSST, along with analysis by age group, and anything deemed of public health importance is alerted by the team. Baselines represent seasonally expected levels of activity and are constructed from historical data since Nov 2009. They take into account any known substantial changes in data collection, population coverage or reporting practices. Gastroenteritis, diarrhoea and vomiting baselines also account for changes since the introduction of rotavirus vaccine in July 2013. Baselines are refreshed using the latest data on a regular basis. 		
Moving Epidemic Method (MEM):	 During winter 2018/19 we are presenting Moving Epidemic Method (MEM) influenza thresholds on selected indicators. The moving epidemic method or MEM is a standard methodology used for setting influenza thresholds across many European nations.¹ MEM is used for GP OOH ILI thresholds at a national level. MEM thresholds should be interpreted using 7 day moving averages rather than daily data. MEM thresholds currently use five years of historic data (2013-2018). The thresholds are re-calculated every year. 'Pre-epidemic thresholds' are used alongside other surveillance systems to identify the start of influenza circulating in the community 40%, 95% and 97.5% intensity thresholds are used to identify when influenza activity moves from low to medium, high or very high. ¹Vega T et al. Influenza Other Respir Viruses. 2013;7(4):546-58. 		
Further information:	The GP Out-of-Hours Surveillance System Bulletin can also be downloaded from the PHE Real-time Syndromic Surveillance website which also contains more information about syndromic surveillance:		
Acknowledgements:	https://www.gov.uk/government/collections/syndromic-surveillance-systems-and-analyses We are grateful to Advanced and the GP OOH and unscheduled care service providers who have kindly agreed to participate in this system. PHE Out-of-Hours/Unscheduled Care Surveillance
