# Monthly Summary

- 1.1.1 This Summary Report is published in fulfilment of commitments detailed in the High Speed Rail (London-West Midlands) Environmental Minimum Requirements, Annex 1: Code of Construction Practice, for the nominated undertaker to present the results of air quality and dust monitoring undertaken in the London Borough of Hillingdon (LBH) during May 2019 and June 2019 respectively.
- 1.1.2 Figure 1 to Figure 4 in Appendix A indicate the current worksites, together with air quality and dust monitoring locations.
- 1.1.3 This summary should be read in conjunction with the overview monitoring report available from [www.gov.uk/government/collections/monitoring-the-environmental-effects-of-hs2](http://www.gov.uk/government/collections/monitoring-the-environmental-effects-of-hs2), which highlights: the applicable standards and guidance, as well as the air quality and dust monitoring methodologies to be implemented by nominated undertakers throughout construction.
- 1.1.4 The current phase of works commenced within the LBH during May 2018 and are expected to be completed by July 2019. The current worksites, as presented in Appendix A, Figure 1, include:
- 18' and 48' gas pipeline diversions, advanced planting and habitat creation, worksite ref. S002-WS05;
  - Merck Sharpe Dohme, demolition works and new access road construction, worksite ref. S002-WS03;
  - Utility diversions at Breakspear Road South, worksites ref. S002-WS07 and S002-WS08;
  - Utility diversions at Copthall North, worksite ref. S002-WS06 and South, worksite ref. S002-WS04; and
  - Haul Road construction and site compound and vegetation clearance at West Ruislip Golf Course site, worksite ref: S002-WS09.
- 1.1.5 Two (2) dust monitors were installed around worksite S002-WS03, where site establishment works are underway. This site returned a high dust risk rating.
- 1.1.6 Dust monitoring locations and results are presented in Appendix B, Table 1 together with line charts of monthly data from each dust monitor in Figure 5. All continuous dust monitoring is undertaken using indicative monitors. Despite being Environment Agency (MCERTS) certified, indicative monitors carry a higher level of uncertainty than reference monitors, and therefore cannot be strictly compared with Air Quality Standards for human health and the environment. The purpose of the monitoring undertaken is to ensure the effectiveness of the on-site mitigations.
- 1.1.7 The trigger level of 190  $\mu\text{g}/\text{m}^3$ , over a 1-hour period, in accordance with the updated guidance document 'Guidance on Monitoring in the Vicinity of Demolition and Construction Sites – October 2018)' has been applied.

- 1.1.8 There were no (0) dust trigger alerts recorded during the month of June 2019. All results were in line with the expected ranges.
- 1.1.9 Diffusion tube monitoring of Nitrogen Dioxide (NO<sub>2</sub>) was undertaken at eleven (11) locations in May 2019, around highways within the LBH as part of the management of air quality where significant effects may occur as a result of the scheme.
- 1.1.10 Diffusion tube monitoring results are provided from the laboratory analysis, and therefore still require various analysis and adjustments to be undertaken. Final corrected results will be presented and described in the annual report. However, based on the results to date, no unexpected values were recorded during the monitoring period.
- 1.1.11 NO<sub>2</sub> monitoring locations and results are presented in Appendix C, Table 2, together with the 2019 running mean.
- 1.1.12 There were no complaints received, relating to dust or air quality, during this monitoring period (June 2019).

# Appendix A – Worksites and Monitoring Locations

HS2-000020BQP	Sign post on Long Lane	507614, 184663	43	47	43	48	38								44
HS2-000020BP8	Triplicate site at South Ruislip roadside automatic monitoring station	510858, 184916	46	44	34	36	29								38

<sup>1</sup> Note: to aid interpretation and conform with best practice, the monthly measurements in this table are reported rounded to the nearest whole number. The annual mean presented here is calculated based on laboratory data to 4 significant figures, rounded to a whole number, and therefore may differ slightly to a mean derived from averaging the rounded monthly measurements in the table.
