NOTES

1. The character е should be romanized **ye** initially, after the vowel characters а, е, ё, и, о, ү, ы, ә, ѡ, and я, and after й, ь, and ѿ. In all other instances, it should be romanized **e**.

2. The character ё should be romanized **yё** initially, after the vowel characters а, е, ё, и, о, у, ы, э, ю, and я, and after й, ь, and ь. In all other instances, it should be romanized ё. Often the dieresis is not shown in Cyrillic, and in this case, the character should be romanized as 'ё'/'yё', as outlined above, if known to be relevant, or otherwise 'е'/'ye' as described in note 1.

3. An inventory of letter-diacritic combinations, with their Unicode encoding, in addition to the unmodified letters of the basic Roman script is:

À (U+0102)	à (U+0103)
Ё (U+00CB)	ё (U+00EB)
Ѐ (U+0114)	ӗ (U+0115)
Ӯ (U+015A)	Ӱ (U+015B)
ӻ (U+00DC)	ӻ (U+00FC)
Ӵ (U+0116)	Ӵ (U+0117)

4. The Romanization columns show only lowercase forms but, when romanizing, uppercase and lowercase Roman letters as appropriate should be used.
