Security classification: OFFICIAL

Handling Instructions: Uncontrolled when printed

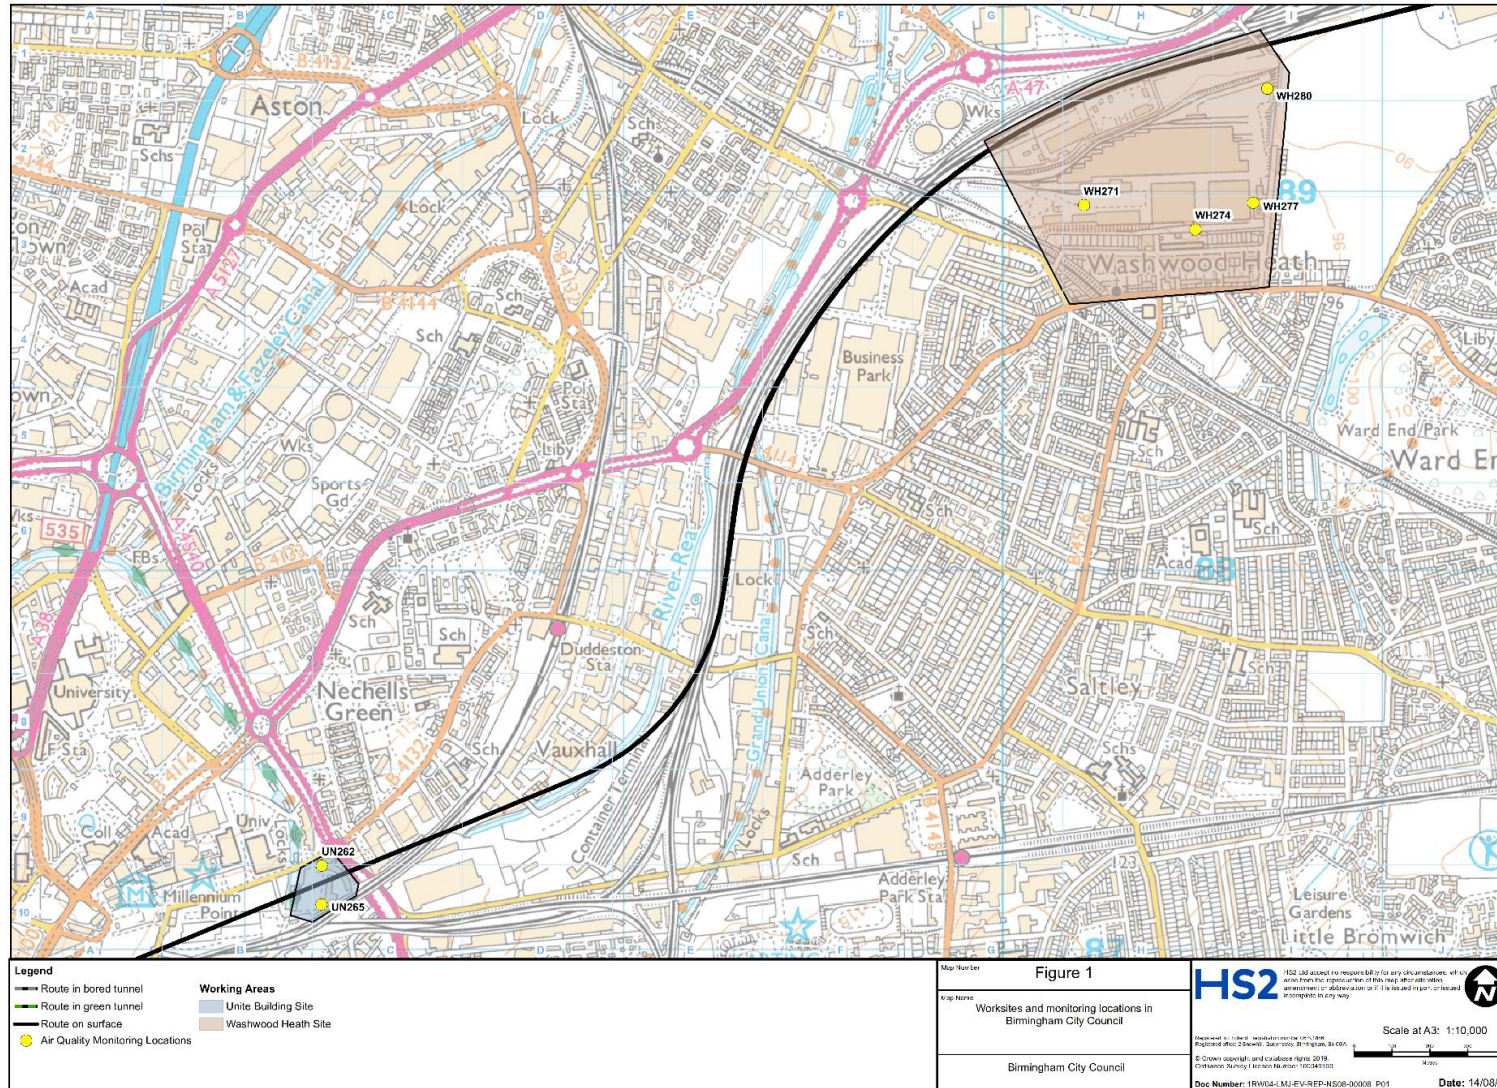

Monthly Summary

- 1.1.1 This Summary Report is published in fulfilment of commitments detailed in the High-Speed Rail (London-West Midlands) Environmental Minimum Requirements, Annex 1: Code of Construction Practice, for the nominated undertaker to present the results of dust monitoring undertaken within Birmingham City Council (BCC) during August 2019.
- 1.1.2 Figure 1 in Appendix A indicates the BCC worksites together with dust monitoring locations for August 2019.
- 1.1.3 This summary should be read in conjunction with the overview monitoring report monthly available from www.gov.uk/government/collections/monitoring-the-environmental-effects-of-hs2, which highlights the applicable standards and guidance, as well as the air quality and dust monitoring methodologies to be implemented by nominated undertakers throughout construction.
- 1.1.4 The current phase of works commenced in BCC during September 2018 at the Washwood Heath Site, and in December 2018 at the Unite Building Site, and will continue to run until late 2019.
- 1.1.5 The current worksites (Washwood Heath and Unite), as presented in Appendix A, Figure 1, include demolition of the existing buildings. The majority of the buildings to be demolished are constructed of metal cladding and brick, and with steel structures at Unite. Crushing of the material will take place at Washwood Heath and Unite, however there will be no works taking place below slab level.
- 1.1.6 Six (6) dust monitors (DM11s) were installed for the current phase of works, of which, four (4) were installed at the Washwood Heath site and two (2) at the Unite Building Site. The demolition and pre-demolition works is underway at these sites. The sites were previously classified with a high dust risk rating (Washwood Heath) and a medium to high dust risk rating (Unite).
- 1.1.7 Dust monitoring locations and results for August 2019 are presented in Appendix B, Table 1 together with line charts for August from each dust monitor. All continuous dust monitoring is undertaken using indicative monitors. Despite being Environment Agency (MCERTS) certified, indicative monitors carry a higher level of uncertainty than reference monitors, and therefore cannot be strictly compared with Air Quality Standards for human health and the environment. The purpose of the monitoring undertaken is to ensure the effectiveness of the on-site mitigation.
- 1.1.8 The trigger level of $190 \mu\text{g}/\text{m}^3$, over a 1-hour period, in accordance with the updated guidance document '*Guidance on Monitoring in the Vicinity of Demolition and Construction Sites – October 2018*' has been applied.

- 1.1.9 There were no (0) dust trigger alerts recorded during the monitoring period (August 2019).
- 1.1.10 Data capture for August monitoring data was below 90% for monitors 271 (Washwood Heath 3), 274 (Washwood Heath 4), 277 (Washwood Heath 5) and 280 (Washwood Heath 6). Problems with power supply has been determined as the cause of loss of data at Washwood Heath 3. Data was lost at Washwood Heath 4, 5, and 6 because of instrument failure caused due to insufficient fuel. Monitors 262 and 265 showed a data capture of greater than 90%.
- 1.1.11 No (0) complaints were received relating to air quality and dust during this monitoring period (August 2019).

Appendix A – Worksite and Dust Monitoring Locations

Figure 1: Birmingham City Council Worksites and Monitoring locations during August 2019

Appendix B – Dust Monitoring Results

Table 1: Dust monitoring locations and August 2019 Results

Monitoring site ID	Coordinates (X,Y)	Location description	Dust risk rating for site	Monitoring site active during period	Change to site since previous period report	Mean 1-hour PM ₁₀ concentration (µg/m ³)	Minimum 1-hour PM ₁₀ concentration (µg/m ³)	Maximum 1-hour PM ₁₀ concentration (µg/m ³)	Number of 1-hour periods exceeding trigger level of 190 µg/m ³	Data capture rate (%)
HS2 3 WH 271	410698,289273	Monitor secured on a stand	High	Yes	N/A	11.8	1.7	47.2	0	78.6
HS2 4WH 274	410661,288971	Monitor secured on a stand	High	Yes	N/A	16.5	0.9	48.8	0	28.0
HS2 5WH 277	410508,288901	Monitor secured on a stand	High	Yes	N/A	17.1	7.1	84.6	0	62.6
