1. Introduction

This technical memorandum presents the scope, methodology, results and conclusions of the desk-based assessment of:

- Local baseline / background concentrations of fire effluent chemicals of potential concern (COPC), as reported in ground investigation reports submitted under Planning to RBKC and LBHF.
- Historical and current land-uses that might give rise to anthropogenic (i.e. man-made) contamination of soil (defined in this case as elevated concentrations of the COPC).

2. Objective

The objectives of the assessment are to:

- Identify locations with the potential for the presence of historic contamination, and/or ongoing contaminative land uses, that are not associated with the Grenfell Tower fire.
- Identify existing ground investigation information that might include chemical concentrations in soil data that can be used to help establish a baseline for soil conditions in the vicinity of the Tower.

3. Methodology

The assessment was completed in accordance with the 'alternative approach scope' described in AECOM's technical memorandum for the Evidence Review (AECOM, 2019a). The methodology is summarised as follows:

- Ground investigation reports submitted to RBKC under the Planning Regime will be reviewed for location and relevance of soil sample analysis reported.
- Spatial mapping of historic and current land-uses. This task has been completed using commercial environmental searches, historical aerial photographs, and information from RBKC's GIS, with information gathered for the subject areas as specified in the preliminary risk assessment reporting checklist from the Environment Agency (EA) (2010) Guiding Principles for Land Contamination.

4. Sources of Information

The information and documents reviewed for the purpose of this report are given below:

- Landmark Envirocheck[®] GIS Data (reference 201145111).
- Landmark Envirocheck[®] Historical Map Report (reference 201535387_1_1, 23 April 2019) (**Appendix TN10/12-A**).
- Publicly available ground investigation (GI) information on the Council environment and planning search webpage: <https://www.rbkc.gov.uk/planning/searches/default.aspx> (accessed between 5th April and 3rd May 2019).
- RBKC Brownfield Land Register and associated GIS files.
- RBKC Contaminated Land Inspection Strategy and associated GIS files.

The RBKC Planning search used the following criteria restrictions, with all other filter fields left unfiltered:

- Application Type: PP and CON.
- Postcode: W10, W11.
- Ward: Notting Dale, St. Helens.

23 applications and 703 decisions were checked under application type PP and 1 application and 196 decisions were checked under application type CON. Where relevant, site investigation data has been extracted into **Table TN10/12-01** below.

5. Results

Review and summary data from local ground investigation (GI) reports submitted under Planning

Ground Investigation (GI) reports submitted to RBKC under the Planning Regime for sites within 500m radius of the Tower, and two GI reports submitted to LBHF for large sites to the west and south west of the Site, have been reviewed for location and relevance of soil sample analysis reported, as summarised in **Table TN10/12-01** (below) and are shown on the appended **Figure TN10/12-01**. The exception is 49 Bassett Road which is located outside the area of the map).

A further tabular summary of notable chemical analysis from the identified GI reports is provided in the appended Table A.

Table TN10/12-01. Summary data from local GI reports submitted under Planning.

Planning Application Reference	Location	Available reports reviewed	Comments
PP/12/01833 Kensington Academy and Leisure Centre and area known as KALC.	Immediately north, east and west of Site.	Royal Borough of Kensington and Chelsea; Proposed Kensington Academy and Leisure Centre Development - Preliminary Contamination Assessment (MLM Consulting Ltd, August 2012)	The report was prepared by MLM Consulting Ltd (MLMCL) for the Royal Borough of Kensington and Chelsea (RBKC) to inform the proposed redevelopment of the existing Kensington Leisure Centre and nearby car parking and public amenity space with a new academy, leisure centre and residential apartments. Several phases of construction and demolition occurred on site, with historical buildings of note on site including Kensington Public Swimming Baths (c.1895-c.1981), a bakery and an engineering works (both c.1954-c.1981) and Kensington Leisure Centre (c.1973-present day). Trade directory records held by the local authority also identify a number of motor trade sites on site (including a car body builder and a motor garage), a rag and metal merchants and a radio manufacturer in the west of the site.
		Royal Borough of Kensington and Chelsea - Proposed Kensington Academy and Leisure Centre Development - Phase 2 Geo-Environmental Assessment (MLM Consulting Ltd, August 2012)	The investigation and risk assessment at the proposed Kensington Academy and Leisure Centre development comprised of three boreholes and 19 window samples. The investigation identified some contaminants in made ground at concentrations above human health Generic Assessment Criteria (GAC) for residential land use. The maximum concentrations identified in soil were lead at 12000mg/kg; benzo[a]pyrene at 3.5mg/kg; and chloromethane at 3.5mg/kg. Zinc was identified above phytotoxicity guideline values at 770mg/kg. No asbestos fibres were recorded in any of the soil samples tested.
CON/13/00180 (Phase 1), refers to	Adjacent north of the	Ground Investigation at	Historically, the site was occupied by an engineering works.

Planning Application Reference	Location	Available reports reviewed	Comments
submissions to satisfy conditions placed on PP/12/01833.	Site	Kensington & Chelsea Sport Pitch (Geotechnics Limited, January 2013)	<p>A geo-environmental investigation was undertaken by Geotechnics Ltd at the site of a proposed new Academy and redevelopment of an existing Leisure Centre.</p> <p>The investigation comprised six window sample boreholes to depths of 0.8 to 4m bgl (metres below ground level). The soil results indicated isolated hotspots of elevated chromium VI, lead, vanadium and hydrocarbons concentrations.</p> <p>Lead was identified above the residential soil guideline value (SGV) of 450mg/kg in four of the six locations. Lead concentrations of between 18mg/kg and 4200mg/kg were identified (although the latter was considered likely to be attributable to the presence of metal pipework).</p> <p>Asbestos was identified in half of the locations as loose bundles of chrysotile and the report stated that it may be related to old pipework lagging and tile/bonded building materials.</p>
CON/14/01056 (Phase 2) refers to submissions to satisfy conditions placed on PP/12/01833.	Adjacent east of the Site	Supplementary Ground Investigation at Kensington and Chelsea Leisure Centre Factual and Interpretative Report (Geotechnics Limited, July 2013)	<p>A supplementary geotechnical and geo-environmental investigation was undertaken by Geotechnics Ltd at the site of a proposed swimming pool at the Kensington and Chelsea Leisure Centre. The investigation comprised drilling two boreholes.</p> <p>The ground investigation identified slightly elevated levels of vanadium (maximum 110mg/kg) and chromium VI (highlighted in report table however number not legible).</p> <p>Asbestos was not identified in soil samples in this investigation.</p> <p>Benzo(a)pyrene was identified in soil at concentrations up to 0.7mg/kg.</p>
CON/14/08075 (Phase 1-3) refer to submissions to satisfy conditions placed on PP/12/01833.	Immediate north, east and west of Site	Topsoil Validation Report: Kensington Academy, Silchester Road (Tim O'Hare Associates, March 2015)	<p>A total of 27 topsoil samples were taken for the Topsoil Validation Report.</p> <p>Factual data for metals, total cyanide, total sulphate, elemental sulphur, sulphide, total monohydric phenols, pH, soil organic matter, asbestos screen, TPH and PAHs was included, but no interpretation of the data was included.</p> <p>Asbestos was not identified in any of the samples.</p>
CON/17/00318	Kalc, Walmer Road, London, W10 6EX (200m east of the Site)	KALC, Walmer Road, London, W10 6EX. Preliminary Risk Assessment Version 28466 R01 (04) (RSK, October 2017)	<p>On the instructions of EC Harris, on behalf of Grainger Kensington and Chelsea Limited, RSK Environment Limited (RSK) prepared a preliminary risk assessment (PRA) for a parcel of land adjacent to Kensington Leisure Centre (KALC) situated off Walmer Road, London, W10 6EX.</p> <p>RSK summarised the historical site investigation carried out at the site by Concept Engineering Consultants Ltd¹ in September 2015, which consisted of one borehole and five trial pits. The soil sample results from Concept were compared against RSKs' GAC derived for residential end-use without home grown produce.</p> <p>Elevated concentrations of lead were found with a maximum concentration of 1300 mg/kg.</p>

¹ Concept Engineering Consultants Ltd, (2017). Site investigation report, report ref: 15/2755 – FR 01, dated 30 August 2017.

Planning Application Reference	Location	Available reports reviewed	Comments
			<p>Asbestos (loose amosite fibres) was identified in one sample (no quantification analysis was included within the report.)</p> <p>RSK summarised the historical site investigation carried out at the site by MLM Environmental in September 2011² consisting of three boreholes and 19 window samples. Elevated concentrations of lead with a maximum concentration of 450mg/kg was reported in the made ground. Dibenz(a,h)anthracene was also found to be elevated, at a concentration of 0.33mg/kg in one made ground sample.</p>
		<p>KALC, Walmer Road, London, W10 6EX. Supplementary Geoenvironmental Site Investigation Version 28466 R02 (05), (RSK, October 2017)</p>	<p>Supplementary site investigation works were undertaken by RSK in August 2016 and May 2017 for the parcel of land adjacent to Kensington Leisure Centre, situated off Walmer Road, London, W10 6EX. The works consisted of four boreholes, one hand pit and four trial pits</p> <p>Elevated concentrations of lead (maximum 691mg/kg) and mercury (maximum 11.1mg/kg) were identified. Several SVOC compounds were detected in made ground. These included perylene (maximum concentration 0.823 mg/kg) and carbazole (maximum concentration of 0.4 mg/kg).</p> <p>Detectable asbestos fibres (amosite maximum of 0.003 % asbestos by weight) were found in one of the 10 made ground samples submitted for screening.</p>
PP/05/02747	<p>Land Opposite Kingsnorth House, Kingsdown Close, London, W10 (120m north of the Site)</p>	<p>Land Adjacent Kingsnorth House, Kingsdown Close, London W10, Report on Desk Study & First Stage Assessment (Applied Environmental Research Centre Ltd, April 2006)</p>	<p>The report stated that the site has been developed since at least 1896 with residential properties, which were demolished by 1972 and the site became vacant. At the time of the site visit (2006), the site included vehicles from the adjacent garage, a metal drum containing ash, tyres and plastic containers, and an area utilised for oil drums, tyres and building rubble.</p>
		<p>Land Adjacent Kingsnorth House, Kingsdown Close, London W10, Report on Ground Investigation (Applied Environmental Research Centre Ltd, May 2006)</p>	<p>The ground investigation consisted of two boreholes and six window samples, and identified elevated levels of lead (maximum 2025mg/kg), arsenic (maximum 48mg/kg), mercury (maximum 51mg/kg), zinc (maximum 1530mg/kg), copper (maximum 672mg/kg), TPH (maximum 15,398mg/kg) and PAHs (maximum 217mg/kg) within made ground.</p>
PP/12/00646	<p>Freston Road, London W106TY. (120m west of the Site)</p>	<p>Silchester Garages Development, Kensington, London, Phase II Geoenvironmental Assessment,</p>	<p>The site includes existing garages and landscaping for adjacent flats at Shalfield Drive, London.</p> <p>A ground investigation was carried out in July 2011 and consisted of three boreholes and five window samples. The report identified hotspots of benzo(a)pyrene (maximum concentration 4.2mg/kg) and lead (maximum concentration 2500mg/kg) at the</p>

² MLM Environmental (2011) Phase 2 Geotechnical & Geo-environmental investigation (report ref: DMB/723397/R2), dated September 2011

Planning Application Reference	Location	Available reports reviewed	Comments
		(Clarkebond, July 2011)	site.
		Silchester Garages Development, Kensington, London, Desk Study and Ground Investigation Report (Geotechnical and Environmental Associates, January 2012)	<p>A ground investigation was carried out in July 2012 and consisted of one borehole, one window sample, six hand pits and three trial pits.</p> <p>The report identified arsenic (maximum concentration 97mg/kg), zinc (maximum concentration 3800mg/kg), benzo(a)pyrene (maximum concentration 10mg/kg), total PAHs (maximum concentration 130mg/kg) and lead (maximum concentration 920mg/kg) notably elevated concentrations in soil at the site.</p>
PP/08/02132	125-135 Freston Road. (330m south-west of the Site)	Ground Investigation Report (Soiltechnics Limited, 2009)	<p>At the time of the Ground Investigation Report, the site included a workshop, used for storage and servicing of motor cars. Historically the site included engineering works, with Dye works immediately adjacent.</p> <p>The ground investigation consisted of two trial pits and five boreholes and identified locally elevated concentrations of lead (maximum concentration: 2400mg/kg) and benzo(a)pyrene (maximum concentration: 45mg/kg).</p>
2014/04726/OUT	(380m south-west of the Site)	Ground Investigation at White City OAPF Area (M&S Site) Factual Report (Geotechnics Ltd. 2012)	<p>A geoenvironmental investigation was undertaken by Geotechnics Ltd at the Marks and Spencer distribution Centre to provide information for a potential acquisition of the site.</p> <p>The investigation consisted of three boreholes and three windowless boreholes.</p> <p>Elevated levels of metals (maximum concentrations for lead 4500mg/kg, mercury 3.4mg/kg and arsenic 76mg/kg) were reported. Chromium was identified with a maximum concentration of 68mg/kg, and several PAHs were reported at elevated concentrations (benzo(a)pyrene 9.8mg/kg, chrysene 8.5mg/kg, benzo(b)fluoranthene 7.0mg/kg and dibenzo(a,h)anthracene 1.0mg/kg.)</p>
2012/02454/OUT (and 2012/02455/CAC)	Former Dairy Crest Site, Land Beneath and Bounded by Westway, and West London Railway Line and Adjoining 58 Wood Lane London W12 (380m west of the Site)	Ground Conditions and Contamination Environmental Statement (WSP, 2012)	<p>This report contains data from site investigations from White Young Green (2002) and RPS (2007).</p> <p>Elevated levels of metals (maximum concentrations for lead 1300mg/kg, zinc 3900mg/kg, arsenic 60mg/kg, copper 320mg/kg and boron 3.6mg/kg) were reported. Elevated TPH concentrations were reported with a maximum concentration of 2900mg/kg and benzo(a)pyrene with a maximum concentration of 4.9mg/kg.</p> <p>The ES mentions a large fire which occurred on the site in 2012. The fire was limited to the main parts of the building, however the ES acknowledges that it may have affected the contamination conditions at the site. This could be through removal of potential contamination sources (e.g. burning of unbanded hydrocarbons); or through increased organic chemical contamination, through melting and burning of substances, potential fuel release; and increased potential for infiltration and migration of contaminants through increased water usage extinguishing the fire.</p>

Planning Application Reference	Location	Available reports reviewed	Comments
			It is not known from the report what the nature and extent of the smoke plume from the fire was.
PP/16/02675	136-142 Bramley Road (210m north of the Site)	Generic Quantitative Risk Assessment (LMB Geosolutions Ltd. April 2016)	<p>A site investigation was carried out in relation to a proposed commercial development.</p> <p>The investigation comprised three boreholes and five dynamic sampling locations.</p> <p>Chemical analysis was carried out for a range of metals, PAHs and TPH however no elevated concentrations above a threshold suitable for commercial land-use were identified.</p> <p>The maximum concentrations detected were lead 520mg/kg, zinc 1400mg/kg, chromium (total) 61 mg/kg, arsenic 52mg/kg and Benzo(a)pyrene 4.3mg/kg.</p> <p>Asbestos was detected (loose chrysotile fibres) and ACM in the form of board/tile in one made ground sample.</p>
PP/15/08132	3-5 Crowthorne Road (350m north west of the Site)	Environmental Site Assessment (OHES Environmental. March 2015)	<p>A site investigation was carried out to assess potential contamination.</p> <p>The Investigation comprised six boreholes.</p> <p>Chemical analysis was carried out for a range of metals, VOCs and carbon banded TPH in the range C8-C40.</p> <p>VOCs were not reported above the laboratory detection limit, with TPH concentrations (maximum of 302mg/kg EPH C8-C40) reportedly lower than GAC protective of residential land-use. The report did not assess metal concentrations against GAC. The maximum concentrations detected for some key metals were lead (389mg/kg), chromium (total) (141mg/kg), and arsenic (45mg/kg).</p> <p>Asbestos was not tested for.</p>
PP/15/07556	49 Bassett Road (440m north of the Site) (Not shown on Figure TN10/12-01)	Report on a Ground Investigation (Site Analytical Services Ltd. January 2015)	<p>A site investigation was carried out as part of site redevelopment.</p> <p>The Investigation comprised one borehole and five hand pits.</p> <p>Elevated levels of metals (maximum concentrations for lead 1600mg/kg, arsenic 38mg/kg and mercury 6.3mg/kg) were recorded. Benzo(a)pyrene with a maximum concentration of 3mg/kg and benzo(b)fluoranthene with a maximum concentration of 4.7mg/kg were also identified.</p> <p>Asbestos was identified as chrysotile insulation board and amosite insulation board in two samples from different depths at one of the four sample locations from which environmental samples were tested.</p>
PP/15/03512	99 – 111 Freston Road (350m south west of the Site)	Ground Investigation Report, Nottingdale Village Phase 3 (Soiltechnics, April 2015) (Further SI has also been carried out on site as part of remediation / validation works to address planning	<p>A site investigation was carried out as part of a proposed site redevelopment.</p> <p>The investigation comprised four boreholes and three trial pits.</p> <p>Elevated soil concentrations of metals (maximum concentrations for lead 3400mg/kg, arsenic 120mg/kg and vanadium 100mg/kg) were reported. Benzo(a)pyrene with a maximum concentration of 1.4mg/kg was also identified.</p>

Planning Application Reference	Location	Available reports reviewed	Comments
		conditions however this was post fire.)	Asbestos was not identified in soil at the site.
CON/16/00834	Avondale Park Primary	Report on a Desk Study and Geoenvironmental Site Investigation (Albury S.I. Ltd. January 2016)	<p>A site investigation was carried out as part of a proposed site redevelopment.</p> <p>The investigation comprised six drilling boreholes.</p> <p>The report identified elevated levels of lead (maximum 510mg/kg), arsenic (maximum 51mg/kg), TPH (maximum 9,700mg/kg) and Benzo(a)pyrene (maximum 98mg/kg)</p> <p>Asbestos was not identified in soil at the site.</p>
Post Fire			
PP/18/07948	141-163 Freston Road, London, W10 6TH (270m south-west of the Site)	A Ground Investigation Report for Land at Freston Road, Kensington and Chelsea (Tier Environmental Ltd, March 2018)	<p>Tier Environmental was commissioned by Freston property Bard Ltd to undertake a ground investigation of land at Freston Road, Kensington, to be developed into a commercial property, with associated courtyard and landscaped areas.</p> <p>Historically the site included railway tracks and a brewery.</p> <p>The investigation consisted of ten hand dug pits, six window samples and three boreholes. Lead was identified at a maximum concentration of 9443mg/kg and 1169mg/kg in made ground.</p> <p>Benzo(a)pyrene was reported at concentrations between 1.04mg/kg and 2.61mg/kg.</p> <p>Two soil samples were found to contain asbestos fibre bundles (<0.1% asbestos fibre bundles of amosite and <0.1% of asbestos fibre bundles of chrysotile).</p> <p>Ash and clinker were noted in the made ground.</p>
PP/19/01748	Railway Mews Ladbroke Grove (500m north east of the Site)	Desk Study, Site Investigation and Ground Movement Assessment (G&J Geoenvironmental Consultants Ltd February 2019)	<p>A site investigation was carried out as part of a basement impact assessment for a 4.8m bgl basement at the site of a former car showroom and garage.</p> <p>The investigation comprised of three boreholes and ten hand pits. Chemical analysis was carried out for a range of metals, PAHs and TPH (incl. BTEX) however no elevated concentrations were identified. A number of chemicals were identified above laboratory detection limits e.g. maximum concentrations of lead, total PAH and BaP were reported as 371mg/kg, 15mg/kg and 1.39mg/kg. The report concluded that maximum concentrations of chemicals did not exceed GAC designed to be protective of human health in a residential land-use.</p> <p>Asbestos was not detected in the analysed samples from site.</p>

6. Historical and current land-use mapping

Historical mapping has been reviewed to evaluate past land-use activities (to a 1000m distance from the Tower), that may have potentially impacted land quality. Historical Ordnance Survey (OS) map extracts were obtained from a commissioned Landmark Envirocheck Report and copies of the maps are provided in **Appendix TN10/12-A**.

A summary of the historical mapping review is presented in **Table TN10/12-02** (please note all distances provided are approximate). For the purposes of Table 2 “the Site” is defined as the area within the current security cordon around the Tower. This area includes the Tower itself, service roads/paths, and areas of open space associated with the Tower; “off-site” refers to any land outside the cordon.

Table TN10/12-02. Review of Historical Mapping Data

Year	Scale	Description On Site	Description Off Site
1867	1:1,056	The Site is open land.	Hammersmith & City Railway and West London Junction Railway are 60m west and 400m west of the Site, respectively. A large area occupied by a brick field is 180m south of the Site.
1870	1:2,500	No significant change apparent at map scale.	West London Iron Works are shown 320m south-west of the Site
1874	1:10,560	No significant change apparent at map scale.	No significant change up to 500m from the Site apparent at map scale. 'Nottinghill' Railway station is shown 550m north-east and a coal depot is 800m to the south. The area between 500m and 1,000m from the Site is generally residential to the south and east, and agricultural to the north, west and south-west.
1895-1896	1:1,056 1:2,500 1:10,560	The Site has been developed as residential properties on Blechynden Street.	Kensington Public Swimming Baths is shown 40m north of the Site. Latimer Road station is located 180m south-west of the Site. The brick field 180m south of the Site has been developed with residential properties. Breweries are shown 280m east and 250m south-west of the Site. Western iron works are located 220m north-east and dye works are 350m south-west of the Site. The area to the west of the West London Railway (450m west of the Site) includes Eynham brick fields, and from 650m west of the Site, beyond Wood Lane are Cowley brick fields). Marylebone Infirmary is located 800m to the north of the Site. The area to the north of the Site is becoming increasingly residential.
1916	1:2,500	No significant change apparent at map scale.	A Garage is identified 300m north west of the Site. A coach factory is shown at the former dye works location, 350m south-west of the Site.

Year	Scale	Description On Site	Description Off Site
1920	1:10,560	No significant change apparent at map scale.	<p>No significant change up to 500m from the Site apparent at map scale.</p> <p>Kensington Borough Council Depot is located 500m to the south-west of the Site.</p> <p>The Central London Railway Depot is located 650m to the south-west of the Site.</p> <p>The Olympic Stadium is shown 700m to the west of the Site, and Wood Lane Railway Station 850m to the south-west of the Site.</p>
1947	1:2,500	No significant change apparent at map scale.	The area to the west of the West London Railway (450m south-west of the Site) has been developed with a number of industrial buildings.
1940-1951	1:10,000		The area to the north and north-west of the Site beyond 500m has become increasingly residential.
1954-1955	1:1,250	No significant change apparent at map scale.	<p>Printing works are shown 250m south west of the Site, and engineering works and furniture depository are indicated 280m south-west of the Site.</p> <p>The area further to the south-west, beyond Latimer Road, includes dyeing and cleaning works (Devon Works), engineering works, printing works, motor repair works, a joinery, tanks and electrical substations located from 300m to the west and south-west of the Site.</p>
1955	1:2,500		<p>Industrial activities to the north of the Site include laminated spring works (80m north-west), warehouse (210m north-west), engineering works (120m north-east and 300m north-west), metal works (250m north-west), a transport depot (170m north-east), a garage (180m north), a builder's yard (180m north) and an electrical substation 230m north-east.</p> <p>A laundry is shown 230m south.</p> <p>A builder yard is shown 250m south-east of the Site.</p> <p>A bakery and engineering works are located 120m and 180m south-east of the Site, respectively.</p> <p>A warehouse; labelled London County Council Supplies department Olaf Street Depot, is shown 400m south-west of the Site.</p>
1955-1958	1:10,000		<p>The area to the west of the West London Railway (450m south-west of the Site) includes a milk depot and works.</p> <p>A goods and coal yard is shown 600m to the south, and works are shown 600m to the north-west of the Site.</p> <p>A hospital is shown 750m to the north-west of the Site (along the western side of Kensington Memorial Park).</p> <p>A station and a TA centre are shown 550m and 700m to the west respectively.</p> <p>The area of the Central London Railway Depot is now labelled as a 'station disused'.</p>
1962-1968	1:10,000	No significant change apparent at map scale.	<p>No significant change up to 500m from the Site apparent at map scale.</p> <p>The disused former Central London Railway Depot is now labelled as White City Depot.</p>

Year	Scale	Description On Site	Description Off Site
1963-1972	1:1,250	No significant change apparent at map scale.	Westway (elevated road) is shown 150m north of the Site.
1966-1969	1:2,500	No significant change apparent at map scale.	The engineering works 120m south-east of the Site are no longer shown on the map.
1971-1976	1:1,250	The Site and the area within 100m to the south appear to have been cleared.	The area 80m to the south-east of the Site has been redeveloped, with the construction of Kensington Sport Centre.
1974-1976	1:10,000		
1977	1:1,250	The Site includes the Grenfell Tower.	The area to the south of the Site has been redeveloped in a residential complex including landscaped areas.
1988	1:1,250	No significant change apparent at map scale.	The area to the west of the West London Railway (450m south-west of the Site) includes depots and warehouses.
1984-1988	1:10,000		
1989	1:1,250	No significant change apparent at map scale.	A car park is shown 50m north-east of the Site.
1991	1:1,250	No significant change apparent at map scale.	No significant change apparent at map scale.
1991-1996	1:10,000		
1999	1:10,000	No significant change apparent at map scale.	No significant change apparent at map scale.
2006	1:10,000	No significant change apparent at map scale.	No significant change apparent at map scale.
2019	1:10,000	No significant change apparent at map scale.	The area to the west of the West London Railway (450m south-west of the Site) has been cleared.

In the early nineteenth century, prior to the earliest historical mapping available during the production of this report, the area around Notting Hill was famed for its potteries and piggeries, both of which are considered to be potential sources of land contamination. The potteries used local clay to fire bricks and tiles in kilns. A brick making kiln is still present 490m south east of the site on Walmer Road.

The London County Council Bomb Damage Maps 1939-1945, book indicates in Map 59 that the area to the east, south east, and south of the Tower suffered extensive bomb damage during the Second World War.

All the houses within the triangular area (bordered by Lancaster Road, Fowell Street and Bomore Road) approximately 30m to the south east of the Tower are shown as having been affected. The damage varies from damaged beyond repair, to blast damage, considered to be minor in nature. Where the damage was most severe along Bomore Road, the 1947 aerial photograph shows that properties have been rebuilt. A further area of total destruction and damaged beyond repair is shown to the south of Bomore Road, with these houses also having been rebuilt after War.

The majority of the properties within the kite shaped area (bordered by Lancaster Road, Treadgold Street and Grenfell Road) approximately 60m to the south of the Tower are shown as having been affected. The damage varies from total destruction, to seriously damaged, but repairable at cost. The 1947 aerial photograph shows that the affected properties within this kite shaped area have been rebuilt.

Over half the houses within the triangular area (bordered by Lancaster Road, Bramley Road and Barandon Street) approximately 100m to the south west of the Tower are shown as having been affected. The damage varies from seriously damaged but repairable at cost, to blast damage, considered to be minor in nature. A row of houses directly opposite on the northern side of Barandon

Street were also seriously damaged but repairable at cost. The historical maps do not appear to show that any of these properties were rebuilt after the War.

Additional serious bomb damage is shown further to the south east and south west of the Tower, whereas to the north east, north and north west only isolated patches of 'clearance areas' and a single house showing non-structural blast damage are shown.

Table TN10/12-03 below shows the chemicals of potential concern (COPC) for the various historical land uses identified above in the vicinity of the Tower. The potential contaminants have been compiled from various Department of the Environment (DOE) Industry Profiles, and where these are unavailable for a particular industry, AECOM has used professional experience and judgement.

Where Potential Contaminants have been highlighted in **Table TN10/12-03** below, they have been identified as COPC in TN04 (AECOM, 2019b).

Table TN10/12-03. Potential Contaminants Associated with Historical Off-Site Land Uses

Industry Identified from Historical Maps	Potential Contaminants
Railway lines and Station (from: Railway Land, DOE Industry Profile)	Hydrocarbons PCBs PAHs Solvents Ethylene glycol Creosote Herbicides Metals Asbestos Ash Sulphates
Brick Field (No specific DOE Industry Profile)	Unknown. Potential contaminants associated with unknown fill material could include any of those associated with the wastes from other local industries listed here that were present at the time the brick field was infilled
Iron Works (from Metal manufacturing, refining and finishing works: iron and steelworks, DOE Industry Profile)	Iron Lead Zinc Fluoride Cyanide Sulphates Asbestos PCBs
Breweries (No specific DOE Industry Profile)	Unknown. Could include contaminants associated with storage and use of fuel (coal, ash, oil), hazardous building materials (asbestos), and water treatment effluent/sludges
Dye Works (from: Textile works and dye works DOE Industry Profile)	Metals and Metalloids Inorganic Compounds Sizing Agents (eg polyvinyl acetate) Organic Solvents

Industry Identified from Historical Maps	Potential Contaminants
	Organics (including PAH's) PCBs Dyes Pesticides Asbestos Anthrax spores
Printing Works (from: Profile of miscellaneous industries, incorporating ... printing and bookbinding works, DOE Industry Profile)	Metals and Metalloids Inorganic Ions Acids Asbestos Organics
Engineering Works (from: Engineering works, DOE Industry Profile)	Metals and Metalloids Inorganic Compounds Acids/Alkalis Asbestos PCBs Organic Solvents Halogenated compounds Mineral Oils Effluent Treatment chemical Sludges
Cleaning Works (No specific DOE Industry Profile)	Unknown. Could include inorganic (acid/alkali) and/or organic solvent cleaning chemicals depending on the type of activities undertaken
Motor Repair Works (from: Road vehicle fuelling, service and repair garages and filling stations, DOE Industry Profile)	Metals and their compounds Acids/Alkalis Asbestos Non- halogenated solvents Halogenated solvents PAHs Fuels/hydrocarbons Ethylene glycol Polymerised glycols and ethers
Joinery (from: Timber products manufacturing works, DOE Industry Profile)	Metals and Metalloids Inorganic Compounds Acids/Alkalis Asbestos Organic solvents Preservatives PCBs Dioxins and Furans Fuels

Industry Identified from Historical Maps	Potential Contaminants
Electrical Substations (No specific DOE Industry Profile)	Oils PCBs Asbestos
Metal Works (from: Metal manufacturing, refining and finishing works: iron and steelworks, DOE Industry Profile)	Metals and Metalloids Inorganic Compounds Acids/Alkalis Fuels and oils Organic solvents Asbestos PCBs

Land-use information provided by Landmark in electronic GIS format has been plotted on a map of the Site and surrounding area, included as **Figure TN10/12-02**. This presents information from Landmark's "Historical Land Use and Potentially Contaminative Industries" database. The methodology for identifying the areas marked on **Figure TN10/12-02** is included in **Appendix TN10/12-B** to this technical note.

RBKC provided electronic GIS format data from their Contaminated Land Inspection Strategy and Brownfield Register. The areas contained in the GIS format data are shown on **Figure TN10/12-03**. A list of the sites shown on **Figure TN10/12-03** is included as appended Table B.

Figure TN10/12-04 shows the Proposed Sampling Areas for the Stage 1 sampling in relation to Historical Information of potentially contaminated areas.

7. Conclusions

This Technical Note is a collation of relevant factual information which can be carried forward to be used in the Soil Assessment.

A number of sites associated with potentially contaminative former uses that could have resulted in soil contamination that is unrelated to the Grenfell Tower fire have been identified in this review. The brick works, pottery kilns and ironworks for example could have been responsible for the emission of combustion related airborne particulates, in addition to the solid and/or liquid wastes produced by such activities.

The review has also identified and summarised an existing database of reported chemical concentrations in local soil. The test data (in terms of the extent of contaminants tested for) is typically constrained to standard groups of soil contaminants, such as petroleum hydrocarbons and metals; some of which are consistent with the COPC identified for the Tower fire (for example polycyclic aromatic hydrocarbons).

Appendix TN10/12 - A Envirocheck Report

Historical Land Use Data Methodology

Introduction

In 1998 Landmark Information Group completed the creation of a unique database of Historical Land Use and Potentially Contaminative Industries based on the guidelines set out in the Environmental Protection Act 1990 and the Environment Act 1995. The database was produced from an historical map database created under a joint venture between Landmark and Ordnance Survey (OS) set up in 1995.

The resultant data has proved essential for investigations in to the existence of historically contaminated land. Local authorities throughout England, Scotland and Wales have been able to correctly identify and prioritise key “sources”, as defined within Section 57 of the Environment Act 1995, to establish the presence of “significant pollution linkages” within their specific area.

This document details the methodology, analysis and quality assurance involved in the creation of this database.

Section One: The Base Mapping

The joint venture between Landmark and OS was formed to undertake the task of creating a digital historical mapping archive of mainland UK based on 1:10 560, 1:10 000, 1:2 500 and 1:1 250 scale maps. This historical mapping archive begins with the maps first surveyed in Lancashire in September 1841. The rest of England, Wales and Scotland were surveyed in subsequent years, each county being revised three to five times before 1945. These sheets became known as the County Series because each county was surveyed separately and many of the counties were surveyed to different origins from their neighbours. In 1944/45 the origin was standardised for the entire country and mapping was transferred to the National Grid. The result was a new projection and a map naming convention which continued until the introduction of modern digital mapping (OS Land-Line[®]) in the mid-1990s.

Further details about the joint venture can be found in “Historical Data – A Technical Information Leaflet” produced by Landmark/OS.

Section Two: The Mapping Analysis

In 1996 Landmark began a systematic analysis of the 1:10 000 and 1:10 560 scale historical mapping to identify previous industrial uses of a potentially contaminative nature and key historical land use features. It was decided to restrict analysis to this scale, and not to analyse the larger scale (1:2 500 and 1:1 250) maps, because of the immense number of maps involved and the fact that the detail on the larger scale maps did not greatly amplify the detail on the 1:10 560/1:10 000 scale maps. The detail provided by the smaller scale mapping is sufficient to correctly identify all the major uses mapped by OS plus the vast majority of the smaller sites.

Landmark analysed the maps for up to six time periods (epochs). These epochs included up to four County Series map editions, at 1:10 560 scale, between 1846–1939, the first National Grid 1:10 560 or 1:10 000 maps from 1948 and the latest 1:10 000 National Grid Map.

Seven layers of data were created within a GIS to cover the whole of England, Wales and industrial Scotland: six contaminative use layers corresponding to specific time periods and one land use layer. Potentially contaminative uses were digitised and categorised (*a full list of categories can be found in Appendix A*) into the **six contaminative use layers**, based on each epoch. The seventh layer, **the land use layer** contains the following features: Areas of Unknown Fill (water), Areas of Unknown Fill (non-water), Former Marshes and Areas Liable to Flood.

The analysis was undertaken as a 3 step process: Manual Analysis, Methodology and Digitising. The entire process was then subject to Quality Assurance.

Step One: Manual Analysis

On the first available map for an area, all water features, rivers, streams, ponds, coastline etc, were highlighted. This process was then repeated on the next available map for the area. The second map was then placed over the first map on a light table. Any water feature which did not appear on a subsequent map was marked as an area of **"Disappeared Water"**. These sites were digitised into the land use layer and the process repeated for all epochs.

Potentially contaminative industries and land uses were also identified in the same way, beginning with the first available map and continuing through the subsequent epochs. All uses were grouped into categories based on features identified on the maps. On the first map all potentially contaminative features were highlighted and annotated with a code. A comparison was then made with the next epoch to establish which features remained through the time period and to digitise new sites. This process was repeated for each epoch.

Specific types of industry, e.g. brick works, collieries, mines, pits and quarries, by their nature, created areas which could be subject to infill. The extent of each of these features was mapped over time until there was no indication of their existence. When this occurred the largest area indicated by the analysis of the epoch layers was digitised into the Land Use layer as **"Unknown Fill (Non-water)"**.

In urban and other difficult areas (e.g. the Staffordshire potteries), the analysing process was carried out on a light table. In rural or light areas the same methods of analysis were used except the features were digitised directly onto the screen.

Step Two: Methodology

Three different kinds of features were created: point features, linear features and area features. Features covering an area of less than 100m x 100m on the ground were digitised as **points**, as they were insufficiently defined on the map. Those features which cover a definable area greater than 1ha on the ground were digitised as **polygons** around the boundary of each feature.

Due to changes in the railway network between the 1860s and the 1970s, it was decided that each length of railway line digitised would need to be identical in all the epochs in which the line occurred. This meant that if a siding was visible on a map in the epoch after the initial piece of track was analysed/digitised, the siding would then be analysed/digitised as a separate feature. To facilitate the analysing/digitising of the railway network natural breaks such as bridges and tunnels were used as start and end points for these **linear** features. Within each quarter sheet railways were analysed/digitised from the map edge to the first natural break, to a maximum length of 2km.

Certain additional features were also added to the Land Use Layer: Areas Liable to Flood, Pits Unspecified and Areas of Former Water.

In the early County Series mapping the words “**Liable to Flood**” are found next to some rivers. As the precise extent of the area liable to flooding was unknown the information was captured by digitising a point on the word “to”. The extent of an area of “former marsh” is also not easily identifiable on the 1:10 560 and 1:10 000 maps. This information was captured by digitising points at 100m intervals for those marshes which are no longer visible in the latest map, and are in the proximity of an area where that mapping indicates the likelihood of development.

A specific category, “**Pits Unspecified**”, was created for when the mapping symbology indicates a pit but no text appears on the map. These features were digitised in the relevant epoch layers and copied into the Land Use layer when the following criteria were met:

- The pit is no longer visible on the latest map (epoch 6), or development has occurred where the pit had previously been
- The area of the pit is greater than 1ha on the ground and it is in the proximity of an area where the latest mapping indicates the likelihood of development.

Areas of “**Former Water**” (small streams, drains or ponds) were only digitised into the Land Use layer when the stream or pond was no longer visible on the latest map (epoch 6) and was in the proximity of an area where the latest mapping indicates the likelihood of development.

Step Three: Digitising

The digitising of potentially contaminative features found during analysis was undertaken in-house using software derived from *Genamap*. A contamination layer was allocated to each of the six epochs plus a Land Use layer in the National Grid projection. The system allowed a link between the graphical elements stored in *Genamap* and the attribute data, stored in an *Oracle* database, which contained feature type and date information.

For the mapping pre-digitising checks were carried out to compare the processed images with the paper copies to ensure the best possible processed image was loaded onto the system. Each individual TIFF image was checked and then compared against the most up to date mapping (epoch 6). In this way any mismatch caused by shrinkage of the original scanned paper map was limited. Further mismatch differences between epochs were checked to ensure that they were limited to less than 20 metres.

In urban areas the screen was divided into 16 equal boxes. The digitising process was then carried out by zooming in to each box in turn. This gave a standard working scale of 1:3 463. All digitising was carried out at this scale thus reducing the potential for compounded error due to different digitisers working at different scales on the same region. In rural areas the screen was divided into 9 boxes. All rural areas were then analysed at the scale of 1:4 684, but any digitising of features found in rural areas was done at 1:3 463 (as in urban areas).

Railways were the first features to be digitised. Linear features were copied from the most up-to-date maps to all epochs in which they appeared. Starting at the edge of the map and working in, points were chosen along the length of the rail by tracing its length with the mouse cursor and clicking at chosen points along its length.

For point and polygon features a keyword (contamination/land use types) was selected from the digitising application menu (*see Appendix A for details of the categories used*) and then, depending on the classification, a point/area and or linear feature was digitised. Once the feature had been digitised the next point was chosen and allocated a new sequential number. The classification and the date of the map on which the feature has been digitised were assigned to the feature. The sequential number allocated was a 12-digit GIS Unique Reference Number, called a gisurn. If the same contaminative feature then appeared in the subsequent epoch and in the same position, the original

feature was simply copied to the following epoch. This meant the copied feature kept the same reference number as the original feature, but the date of the map in the next epoch would also be assigned to the feature. This linked the same occurrence of a feature through all epochs.

When features appeared for the first time annotated "Old" or "Disused", they were identified as the first likely potentially contaminative activity at this location and thus digitised. In certain instances active features (such as quarries), which subsequently became disused, were taken as active when they extended to larger areas in the immediately previous epoch. Unless there was a change on the map in subsequent epochs, features were generally taken to be no longer active once the words "Old" or "Disused" were appended to their description on the map.

After digitising features relating to potential contaminative uses, a check of land use was carried out. All water was checked for disappearance from one map edition to another. If any items merited inclusion in the Land Use layer (e.g. ponds that are no longer apparent or any water in one epoch which has been built on in another) these items were digitised in the epoch prior to their disappearance. In this way these items were accurately delineated. As with contamination features, gisurns were automatically allocated and coded as "**Potential Fill (Water)**".

"**Non-water Fill**" was also highlighted in the Land Use layer, as detailed in the Manual Analysis section, but handled differently. Contaminative use features with the possibility of potential fill were checked against the previous epoch. If there was no longer any evidence of the original feature then it was copied through into the Land Use layer at its greatest extent and a gisurn allocated.

In cases where neighbouring counties mapped the same geographical area, each county was analysed in turn until every map covering that area had been examined and a cumulative picture built up. This was done whether the same origin or different origins were used for each of the counties. Whenever potentially contaminative uses appeared at the edge of a map and also on adjacent sheets, all the sheets required were matched to their neighbours. In most cases these potentially contaminative uses were digitised as a single feature even though it crossed the dividing line on the original mapping.

All of these steps were repeated methodically through every box on the screen, from the first available map to the latest epoch.

Section Three: Quality Assurance

All digitisers underwent an extensive training programme. Subsequently, trainee digitisers received individual supervision until they reached a required ability level at which point they joined the main digitising team. A User Manual was created which defined how all features would be handled.

All the data within the Landmark database has been through a rigorous three-part Quality Assessment:

- i. To ensure that the quality of the work undertaken was maintained, all digitised areas have been checked. In addition an independent group of experienced digitisers examined trial sections, generated at random on every area worked on.
- ii. Before digitising a new area, the scanning and cropping quality of each map was verified and the published date checked.
- iii. A supervisory team provided an overview of the process to ensure a uniformity of approach which resulted in a high degree of accuracy within the project. Any areas of work which caused concern were thoroughly re-examined and remedial action carried out if necessary.
- iv. Integrity of the digital data has been checked.

Appendix A

Description	Remarks
Air shafts	Air shafts
Animal by-products (i.e. gelatine, soap, glue etc)	Animal by-products (i.e. animal parts) e.g. soaps, candles and bone works
Animal slaughtering and basic processing of meat (other than poultry)	Animal slaughtering and basic processing
Area liable to flood	Areas 'liable to flood' as indicated on the historical maps
Batteries, accumulators and primary cells [manufacture]	Batteries, accumulators, primary cells, electric motors, generators and transformers
Brewing and malting	Brewing and malting
Cement, lime and plaster products [manufacture]	Concrete, cement, lime and plaster products, also includes lime kilns
Cemetery or graveyard	Cemetery, modern burial grounds and grave yards
Chemical manufacturing general	Manufacture of cosmetics, manure, fertilisers and pesticides, detergents, oil, organic-based pharmaceuticals, glues, gelatines, recording tapes, photographic film
Clay bricks and tiles [manufacture]	Manufacture of clay bricks, breeze blocks and tiles, including associated activities e.g. brick fields, also solitary kilns (other than lime kilns)
Coal storage and depot	Coal storage/depot
Constructional steelwork, metal structures and products and building materials [manufacture]	Constructional steelwork, metal structures and products and building materials
Distribution, telecoms, medical, navigation, metering and lighting equipment [manufacture]	Manufacturing of distribution, telecoms, medical, navigation, metering and lighting
Disturbed ground	Disturbed ground greater than 200m in one dimension
Domestic appliances [manufacture]	Manufacturing of domestic appliances
Dyes and pigments [manufacture]	Dye and pigments
Electricity production and distribution (including large transformers)	Electricity generation and distribution, including large transfer stations
Factory or works — use not specified	Factory and works — use not specified
Food processing — major	Major food processing, includes dairies
Former marsh	Feature is only shown when land has subsequently been built on
Fuel: retail sale of automotive fuel	Sale of automotive fuel
Gas manufacture and distribution	Gas processing/manufacture and oil refining
General quarrying	Quarrying of all stone (including limestone, gypsum, chalk and slate) and ores, includes all open-cast mining and slant workings also slate/slab works, flint works, stone yards
Glass and glass products excluding flat glass [manufacture]	Flat glass and glass products manufacture
Heap, unknown constituents	Must be associated with relevant extraction industry including spoil and slag
Heavy product manufacture — rolling and drawing of iron, steel and ferroalloys	Heavy product manufacture, rolling and drawing of iron, steel and ferroalloys includes major tube works
Hospitals	All hospitals including sanatoriums but not lunatic asylums
Insulated wire and cable [manufacture]	Insulated wire and cable for electrical/telephonic purposes
Laundries and dry cleaning	Laundries and dry cleaning
Leather tanning and dressing	Tannery, leather goods and skimmers
Machinery: engines, building and general industrial [manufacture]	Manufacturing of engines, building and general industrial machinery, including nuts and bolts, gas fittings, wire rope and ordnance accessories
Metal casting/foundries	Furnaces and metal processing/casting/forges/smelting including ferro and aluminum alloys, manganese works etc
Metals: treatment and coating including electroplating	Electro-plating, galvanising and anodizing
Military land	All military establishments including firing ranges (if not specified as civilian)

Mineral products non-metallic (including abrasives and asbestos) [miscellaneous manufacture]	Abrasives, asbestos etc
Mineral railway	Mineral railways
Mining and quarrying general	Areas of mining and single or groups of shafts other than coal and not specified including levels, or adits, etc
Mining of coal and lignite	Coal mining, the manufacturing of coke or charcoal included, are associated surface activities in area, also individual coal mine shafts
Motor vehicles: maintenance and repair e.g. Garages	Repair and sale of i) cars and bikes, ii) parts, iii) services
Natural and man-made textile manufacture and products	Natural and man-made textile manufacture and products including hemp rope
Office machinery and computers [manufacture]	Computers, office machinery, business/industrial electrical goods
Oil, petroleum, gas, refining and storage	Major oil and petrol storage and all gasometers which are not in gas works
Outfalls	Outfalls including warm water, industrial effluent and sewage unless directly attached to other sewerage feature e.g. end of sewer pipe
Paints, varnishes, printing inks, mastics and sealants [manufacture]	Paints, varnishes, printing inks, mastics, sealants and creosote
Paper packaging products [manufacture]	Pulp, paper and cardboard manufacture
Pipelines	Above ground pipelines other than sewerage
Plastic goods, all general manufacture, including building, packaging and tubing	All plastic goods, including building, packages, tubing etc and the manufacture of tar, bitumen and asphalt
Printing of newspapers	Printing of newspapers
Printing: miscellaneous excluding newspapers	Printing other than news print
Pulp, commodity grade paper and paperboard manufacture	Paper, card, etc products e.g. Packaging
Quarrying of sand and clay, operation of sand and gravel pits	Extraction of alluvial sediments (sand, stone, clay, peat, marl and gravel)
Railways	Railway tracks — up to 4 tracks wide
Recycling of metal waste and scrap metal	Recycling of metal waste including scrap yards and car breakers
Refuse disposal	Refuse and waste disposal including incinerators and sanitary depot
Road haulage	Transport depot — road haulage, corporation
Rubber natural products manufacture	Natural and synthetic rubber products including tyres and rubber products
Sawmilling, planing and impregnation (i.e. Treatment of timber)	Sawmilling, planing and impregnation (i.e. treatment of timber), wood products, telegraph works, timber yard e.g. veneer
Sewage	Sewerage, septic-tanks, includes all filter beds
Spirit distilling and compounding	Spirit distilling and compounding
Tableware and other ceramics [manufacture]	Tableware and other ceramics
Technical and environmental testing and analysis	Various technical and environmental testing and analysis
Transport manufacturing and repair	Manufacturing and repair including i) ships, ii) aerospace, iii) rail engines and rolling stock
Transport support and cargo handling	Boat building, wharf and quays, cargo/transport handling facilities
Transport: air and space, cargo and handling and transport support	Air and space transport
Transport: light manufacture	Manufacture of cars, lorries, buses, motorcycles, bicycles
Weapons and ammunition [manufacture and storage]	Civilian manufacture and storage of weapons, ammunition, explosives and rockets

Introduction

The Environment Act 1995 has made site sensitivity a key issue, as the legislation pays as much attention to the pathways by which contamination could spread, and to the vulnerable targets of contamination, as it does the potential sources of contamination.

For this reason, Landmark's Site Sensitivity maps and Datasheet(s) place great emphasis on statutory data provided by the Environment Agency/Natural Resources Wales and the Scottish Environment Protection Agency; it also incorporates data from Natural England (and the Scottish and Welsh equivalents) and Local Authorities; and highlights hydrogeological features required by environmental and geotechnical consultants. It does not include any information concerning past uses of land. The datasheet is produced by querying the Landmark database to a distance defined by the client from a site boundary provided by the client.

In this datasheet the National Grid References (NGRs) are rounded to the nearest 10m in accordance with Landmark's agreements with a number of Data Suppliers.

Please note that the Environment Agency / Natural Resources Wales / SEPA have a charging policy in place for enquiries.

Index Map

For ease of identification, your site and buffer have been split into Slices, Segments and Quadrants. These are illustrated on the Index Map opposite and explained further below.

Slice

Each slice represents a 1:10,000 plot area (2.7km x 2.7km) for your site and buffer. A large site and buffer may be made up of several slices (represented by a red outline), that are referenced by letters of the alphabet, starting from the bottom left corner of the slice "grid". This grid does not relate to National Grid lines but is designed to give best fit over the site and buffer.

Segment

A segment represents a 1:2,500 plot area. Segments that have plot files associated with them are shown in dark green, others in light blue. These are numbered from the bottom left hand corner within each slice.

Quadrant

A quadrant is a quarter of a segment. These are labelled as NW, NE, SW, SE and are referenced in the datasheet to allow features to be quickly located on plots. Therefore a feature that has a quadrant reference of A7NW will be in Slice A, Segment 7 and the NW Quadrant.

A selection of organisations who provide data within this report:

Envirocheck reports are compiled from 136 different sources of data.

Russian Military Mapping Legends

1:5,000 and 1:10,000 mapping

a. Not drawn to scale b. Drawn to scale

	Government and Administrative Buildings		Military and Industrial Buildings
	Military and Communication Areas		Subway Entrance
	Fireproof Building		Prominent Fireproof Building
	Non-fireproof Building		Non-fireproof Building (non-dwelling)
	Factory, mill, and flour mill, with chimneys		Factory, mill, and flour mill, without chimneys
	Power Station, drawn to scale		Hydroelectric Power Station
	Radio Station, drawn to scale		Telephone Station, drawn to scale
	Abandoned Open-pit Mine or Quarry		Open-pit Salt Mine
	Pit		Oil Deposit or Well
	Oil Seepage		Natural Gas Tank
	Tailings Pile		Fuel Storage Tanks
	Bench Mark		Drill Hole
	Burial Mound		Triangulation Point on Burial Mound
	Single-track Railroad		Double-track Railroad
	Small Bridge		Pipe (Culvert)
	Tunnel		Railroad and Station Building
	Coniferous Forest		Deciduous Forest
	Mixed Forest		Lawns
	Citrus Orchard		Wet Ground
	Scattered Vegetation		

243,8 Values for prominent elevations
186.0 Numbers for spot elevations, depth soundings, contour lines, etc.
0,2 Velocity of the current, width of river bed, depth of river
180/12 Fractional terms: length and capacity of bridges; depth of fords and condition of the river bottom; height of forest and the diameter of trees

Russian Alphabet (For reference and phonetic interpretation of map text)

А а (A)	З з (Z)	П п (P)	Ч ч (CH)
Б б (B)	И и (I)	Р р (R)	Ш ш (SH)
В в (V)	Й й (Y)	С с (S)	Щ щ (SHCH)
Г г (G)	К к (K)	Т т (T)	Ъ (-)
Д д (D)	Л л (L)	У у (U)	Ы (Y)
Е е (E)	М м (M)	Ф ф (F)	Ь (')
Ё ё (YO)	Н н (N)	Х х (KH)	Э э (E)
Ж ж (ZH)	О о (O)	Ц ц (TS)	Ю ю (YU or IU)
			Я я (YA or IA)

1:25,000 mapping

a. Not drawn to scale b. Drawn to scale

	Government and Administrative Buildings		Military and Industrial Buildings
	Military and Communication Areas		Subway Entrance
	Partly Demolished Buildings		Demolished Buildings
	Built-Up Area with Fireproof Buildings Predominant		Built-Up Area with Non-Fireproof Buildings Predominant
	Individual Fireproof Building		Prominent Industrial Building
	Individual Dwelling, Fireproof		Ruins of an Individual Dwelling
	Factory or Mill Chimney		Factory or Mill with Chimney
	Factory or Mill without Chimney		Mine or Open Pit Mine
	Operating Shaft or Mine		Non-Operating Shaft or Mine
	Salt Mine		Tailings Pile
	Pit		Stone Quarry
	Gas Pump or Service Station		Fuel Storage or Natural Gas Tank
	Oil or Natural Gas Derrick		Small Hydroelectric Power Station
	Power Station		Transformer Station
	Cemetery		Burial Mound (height in metres)
	Triangulation Point on Burial Mound		Triangulation Point
	Bench Mark		Bench Mark (monumented)
	Telegraph Office		Telephone Station
	Radio Station		Radio Tower
	Airfield or Seaplane Base		Landing Strip
	Cut		Fill
	Main Highway		Highway under Construction
	Improved Dirt Road (former truck road)		Steep Grade
	Small Bridge		Pipe (Culvert)
	Tunnel		Dismantled Railroad
	Double-track Railroad with First Class Station		Railroad Under Construction
	Shore Embankment		River or Ditch with Embankment
	Water Reservoir or Rain Water Pit		Spring
	Isobath with value		Water Gauge
	Direction and velocity of current		Water Level Mark
	Well		Spot Elevation Value
	Heavy (Index) Contour Line		Half Contour Line
	Contour Line and Value		Spot Elevation Value
	Coniferous		Deciduous
	Mixed		Scrub

Published 1874

Source map scale - 1:10,560

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas; these maps were used to update the 1:10,560 maps. The published date given therefore is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas. In the late 1940's, a Provisional Edition was produced, which updated the 1:10,560 mapping from a number of sources. The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.

Historical Aerial Photography

Published 1948

Source map scale - 1:10,560

The Historical Aerial Photos were produced by the Ordnance Survey at a scale of 1:1,250 and 1:10,560 from Air Force photography. They were produced between 1944 and 1951 as an interim measure, pending preparation of conventional mapping, due to post war resource shortages. New security measures in the 1950's meant that every photograph was re-checked for potentially unsafe information with security sites replaced by fake fields or clouds. The original editions were withdrawn and only later made available after a period of fifty years although due to the accuracy of the editing, without viewing both revisions it is not easy to spot the edits. Where available Landmark have included both revisions.

London

Published 1985

Source map scale - 1:25,000

These maps were produced by the Russian military during the Cold War between 1950 and 1997, and cover 103 towns and cities throughout the U.K. The maps are produced at 1:25,000, 1:10,000 and 1:5,000 scale, and show detailed land use, with colour-coded areas for development, green areas, and non-developed areas. Buildings are coloured black and important building uses (such as hospitals, post offices, factories etc.) are numbered, with a numbered key describing their use.

They were produced by the Russians for the benefit of navigation, as well as strategic military sites and transport hubs, for use if they were to have invaded the U.K. The detailed information provided indicates that the areas were surveyed using land-based personnel, on the ground, in the cities that are mapped.

Ordnance Survey Plan

Published 1991 - 1996

Source map scale - 1:10,000

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas; these maps were used to update the 1:10,560 maps. The published date given therefore is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas. In the late 1940's, a Provisional Edition was produced, which updated the 1:10,560 mapping from a number of sources. The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.

10k Raster Mapping

Published 1999

Source map scale - 1:10,000

The historical maps shown were produced from the Ordnance Survey's 1:10,000 colour raster mapping. These maps are derived from Landplan which replaced the old 1:10,000 maps originally published in 1970. The data is highly detailed showing buildings, fences and field boundaries as well as all roads, tracks and paths. Road names are also included together with the relevant road number and classification. Boundary information depiction includes county, unitary authority, district, civil parish and constituency.

VectorMap Local

Published 2019

Source map scale - 1:10,000

VectorMap Local (Raster) is Ordnance Survey's highest detailed 'backdrop' mapping product. These maps are produced from OS's VectorMap Local, a simple vector dataset at a nominal scale of 1:10,000, covering the whole of Great Britain, that has been designed for creating graphical mapping. OS VectorMap Local is derived from large-scale information surveyed at 1:1250 scale (covering major towns and cities), 1:2500 scale (smaller towns, villages and developed rural areas), and 1:10 000 scale (mountain, moorland and river estuary areas).

Historical Aerial Photography

Published 1947

Source map scale - 1:1,250

The Historical Aerial Photos were produced by the Ordnance Survey at a scale of 1:1,250 and 1:10,560 from Air Force photography. They were produced between 1944 and 1951 as an interim measure, pending preparation of conventional mapping, due to post war resource shortages. New security measures in the 1950's meant that every photograph was re-checked for potentially unsafe information with security sites replaced by fake fields or clouds. The original editions were withdrawn and only later made available after a period of fifty years although due to the accuracy of the editing, without viewing both revisions it is not easy to spot the edits. Where available Landmark have included both revisions.

Supply of Unpublished Survey Information

Published 1973

Source map scale - 1:1,250

SUSI maps (Supply of Unpublished Survey Information) were produced between 1972 and 1977, mainly for internal use at Ordnance Survey. These were more of a 'work-in-progress' plan as they showed updates of individual areas on a map. These maps were unpublished, and they do not represent a single moment in time. They were produced at both 1:2,500 and 1:1,250 scales.

Source map scale - 1:1,250

The SIM cards (Ordnance Survey's 'Survey of Information on Microfilm') are further, minor editions of mapping which were produced and published in between the main editions as an area was updated. They date from 1947 to 1994, and contain detailed information on buildings, roads and land-use. These maps were produced at both 1:2,500 and 1:1,250 scales.

Ordnance Survey Plan

Published 1989

Source map scale - 1:1,250

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas and by 1896 it covered the whole of what were considered to be the cultivated parts of Great Britain. The published date given below is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas.

Large-Scale National Grid Data

Published 1991

Source map scale - 1:1,250

'Large Scale National Grid Data' superseded SIM cards (Ordnance Survey's 'Survey of Information on Microfilm') in 1992, and continued to be produced until 1999. These maps were the fore-runners of digital mapping and so provide detailed information on houses and roads, but tend to show less topographic features such as vegetation. These maps were produced at both 1:2,500 and 1:1,250 scales.

London

Published 1850

Source map scale - 1:5,280

The historical town plans shown derive from Ordnance Survey mapping from the early to mid 1850s. The 1:2640 scale was introduced in the early 1850s, to survey districts covered by the Local Boards of Health and for a map of the Osborne Estate of Queen Victoria. The general style is similar to that of the early 1:2500s published shortly afterwards.

1:5280 scale was surveyed shortly afterwards in the mid 1850s as general purpose mapping with a standard of content similar to the more contemporary 1:10,560 mapping. The scale was also used for a reduction of the 1:1056 'skeleton survey' of London that was undertaken between 1848 and 1850.

Please note: Due to the partial coverage of Historical Town Plans, it is possible that not all segments within an order will contain mapping. Only the segments that have Town Plan coverage will be generated.

London

Published 1867

Source map scale - 1:1,056

The 1:1056 scale of Ordnance Survey mapping was adopted from Ireland in 1848 and was used to survey towns with a population of over 4000, plus county towns of lesser population, in those counties mapped at the six-inch scale in 1841-55. The scale was the largest scale at which London was mapped by the Ordnance Survey and a 'skeleton' survey of the capital, showing little more than streets, street names, frontages and altitudes, was undertaken between 1848 and 1850. The majority of the 1:1056 surveys were later replaced by 1:500 surveys; although almost all the remainder were revised at this scale, sometimes more than once before 1895. The type of detail shown on the 1:1056 scale is broadly similar to that on 1:500; the apparent omission of minor details such as sewer access points and street lights may be as much a reflection of the generally earlier date of these plans, as of the specification of the map.

Please note: Due to the partial coverage of Historical Town Plans, it is possible that not all segments within an order will contain mapping. Only the segments that have Town Plan coverage will be generated.
