

### Format for Sending Data

Thank you for your interest in this service. To keep data manipulation to a minimum we would like the data in the following format.

1. The file should be prepared in Excel format.
2. Each row should correspond to a patient and each column to a measurement on that patient. Row 1 should be used to label the variable.
3. Fields to include are:
  - Pseudo Patient ID (numbers 1-N will do)
  - Maternal date of birth
  - Scan date
  - Test date
  - Maternal age at Expected Date of Delivery
  - Gestational age (in days) at test date
  - CRL
  - BPD
  - LMP
  - Maternal weight at test date
  - Smoking status (dose if possible, otherwise Y/N)
  - Ethnicity
  - Previous Down's pregnancy
  - Outcome data
  - NT
  - NT operator code
  - NT MoM
  - NT Delta
  - AFP
  - uE3
  - TCCG
  - Free Beta hCG
  - PAPP-A
  - Inhibin
  - MoMAFP
  - MoMuE3
  - MoMThCG
  - MoMFree Beta hCG
  - MoMPAPP-A
  - MoMinhibin
  - Calculated risk
  - Calculated prior age risk
  - IDDM
  - Twins

Withdrawn October 2019

If you do not record some of the above data then please return a blank column, or a column with NA in each cell.

4. Items under (3) should be in the Excel file. In addition it would be helpful if you could provide:
  - Current medians, by day, or regression equation used. You should indicate both the gestational age and weight adjustment equations used.
  - Current algorithm parameters, means, sd's, correlation coefficients for both the unaffected and affected outcomes.
  - Dates of lot and median changes and corresponding lot numbers.
  - Machine and software used.
5. If there are any specific queries please list them.

We will report back to you as soon as possible, but the response time will depend upon the number of data sets we are currently processing. If you are happy for us to make direct contact with you then please give contact details.
