

Hartland Point to Tintagel MCZ

Description:

Hartland Point to Tintagel Marine Conservation Zone (MCZ) is an inshore site on the north coast of Devon and Cornwall in the south west of England. The site covers 304 km² and follows the coastline along the mean high water mark from Tintagel Head to Hartland Point. This site protects a wide range of features from rocky habitats to soft sediment which are important to the network both regionally and nationally.

Qualifying Features:

Hartland Point to Tintagel MCZ hosts the following habitats and supports the following species: coastal saltmarshes and saline reedbeds, low energy intertidal rock, moderate energy intertidal rock, high energy intertidal rock, intertidal coarse sediment, intertidal sand and muddy sand, moderate energy infralittoral rock, high energy infralittoral rock, moderate energy circalittoral rock, high energy circalittoral rock, subtidal coarse sediment, subtidal sand, fragile sponge & anthozoan communities on subtidal rocky habitats, honeycomb worm (*Sabellaria alveolata*) reefs and the pink sea-fan (*Eunicella verrucosa*).

Management:

None reported.

Stakeholder Concerns:

None reported.
