Data to: 15 December 2019

GP out-of-hours contacts for influenza-like illness remained at medium intensity levels during week 50 (figure 3a). Bronchitis/bronchiolitis contacts in children aged under 1 year decreased during week 50 (figure 4a).

A Cold Watch System operates in England from 1 November to 31 March each year. As part of the Public Health England Cold Weather Plan for England the PHE Real-time Syndromic Surveillance Team will be monitoring the impact of cold weather on syndromic surveillance data during this period.
Cold weather alert level (current reporting week): **Level 1 Winter preparedness**
http://www.metoffice.gov.uk/weather/uk/coldweatheralert/

Syndromic indicators at a glance:

Number of contacts and percentage of Read coded contacts.

Key indicator	No. of contacts	% Week 50	% Week 49	Trend*
All OOH contacts, all causes	195,104			
Acute respiratory infection	15,693	21.91	20.73	↑
Influenza-like illness	460	0.64	0.58	←→
Bronchitis/bronchiolitis	343	0.48	0.55	↓
Difficulty breathing/wheeze/asthma	1,822	2.54	2.36	←→
Pharyngitis	72	0.10	0.14	←→
Gastroenteritis	2,685	3.75	3.92	←→
Diarrhoea	583	0.81	0.84	←→
Vomiting	975	1.36	1.50	←→
Myocardial infarction	645	0.90	0.99	←→

*Trend: reports on the trend seen over previous weeks in the percentage of Read coded contacts.

1: Total out-of-hours contacts:

Daily total number of out-of-hours and unscheduled contacts and 7 day average (adjusted for bank holidays).
17 December 2019

2: Acute Respiratory Infection daily contacts.

Shown as a percentage of the total contacts with a Read code and as a 7 day average*.

3: Influenza-like illness daily contacts.

Shown as a percentage of the total contacts with a Read code and as a 7 day average*.

3a: Daily influenza-like illness contacts by week with MEM influenza activity thresholds and comparison to previous seasons (see notes)

Shown as a percentage of the total contacts with a Read code and as a 7 day average*.

*7-day moving average

Public Health
England

4: Bronchitis/ bronchiolitis daily contacts.

Shown as a percentage of the total contacts with a Read code and as a 7 day average*.

4a: Bronchitis/ bronchiolitis daily contacts by age group*.

Shown as a 7 day moving average contacts as a proportion of the contacts within each age group.

5: Difficulty breathing/ wheeze/asthma daily contacts.

Shown as a percentage of the total contacts with a Read code and as a 7 day average*.
*7-day moving average adjusted for bank holidays.

3

5a: Difficulty breathing/wheeze/ asthma daily contacts by age group*.

Shown as a 7 day moving average contacts as a proportion of the contacts within each age group.

6: Acute pharyngitis and persistent sore throat.

Shown as a percentage of the total contacts with a Read code and as a 7 day average*.

7: Gastroenteritis daily contacts

Shown as a percentage of the total contacts with a Read code and as a 7 day average*.

*7-day moving average adjusted for bank holidays.

4

8: Diarrhoea daily contacts.

Shown as a percentage of the total contacts with a Read code and as a 7 day average*.

8a: Diarrhoea daily contacts by age group*.

Shown as a 7 day moving average contacts as a proportion of the contacts within each age group.

9: Vomiting daily contacts.

Shown as a percentage of the total contacts with a Read code and as a 7 day average*.

*7-day moving average adjusted for bank holidays.

**9a: Vomiting daily contacts by age group*.**

Shown as a 7 day moving average contacts as a proportion of the contacts within each age group.

10: Myocardial Infarction daily contacts.

Shown as a percentage of the total contacts with a Read code and as a 7 day average*.

Intentionally left blank.

*7-day moving average adjusted for bank holidays.

17 December 2019	Year: 2019 Week: 50

Notes and caveats:

- This bulletin presents data from the Public Health England (PHE) GP Out-of-hours\Unscheduled Care Surveillance System (GP OOHSS).
- Fully anonymised data from GP out-of-hours (OOH) and unscheduled care service providers in England are being transferred to the PHE for analysis and interpretation by the PHE Real-time Syndromic Surveillance Team (ReSST).
- This system supplements existing PHE syndromic surveillance systems by monitoring data on general practitioner consultations outside of routine surgery opening times (evenings, weekends and bank holidays) and unplanned contacts within NHS primary care.
- The key indicators presented within this bulletin are derived by grouping selected Read coded consultations.
- GP OOH consultation data are analysed on a daily basis to identify national and regional trends. A statistical algorithm underpins each system, routinely identifying activity that has increased significantly or is statistically significantly high for the time of year. Results from these daily analyses are assessed by the ReSST, along with analysis by age group, and anything deemed of public health importance is alerted by the team.
- Baselines represent seasonally expected levels of activity and are constructed from historical data since Nov 2009. They take into account any known substantial changes in data collection, population coverage or reporting practices. Gastroenteritis, diarrhoea and vomiting baselines also account for changes since the introduction of rotavirus vaccine in July 2013. Baselines are refreshed using the latest data on a regular basis.

Moving Epidemic Method (MEM):

- During winter we present Moving Epidemic Method (MEM) influenza thresholds on selected indicators.
- The moving epidemic method or MEM is a standard methodology used for setting influenza thresholds across many European nations.[1]
- MEM is used for GP OOH ILI thresholds at a national level.
- **MEM thresholds should be interpreted using 7 day moving averages rather than daily data.**
- MEM thresholds currently use six years of historic data (2013-2019). The thresholds are re-calculated every year.
- Baseline ('Pre-epidemic') thresholds are used alongside other surveillance systems to identify the start of influenza circulating in the community
- 40%, 95% and 97.5% intensity thresholds are used to identify when influenza activity moves from low to medium, high or very high.
