

Protecting and improving the nation's health

#### **Official Statistics**

# Breastfeeding prevalence at 6-8 weeks after birth (Experimental Statistics)

Quarter 2 2019/20 Statistical Commentary (January 2020 release)

## About Public Health England

Public Health England exists to protect and improve the nation's health and wellbeing, and reduce health inequalities. We do this through world-leading science, knowledge and intelligence, advocacy, partnerships and the delivery of specialist public health services. We are an executive agency of the Department of Health and Social Care, and a distinct delivery organisation with operational autonomy. We provide government, local government, the NHS, Parliament, industry and the public with evidence-based professional, scientific and delivery expertise and support.

## Main findings

The aggregate breastfeeding rate for England for Quarter 2 2019/20 is 48.1% (with confidence intervals of 47.8 – 48.3%). This is based on 145 out of 146 reporting local authorities submitting a return and passing initial validation.

This is higher than the aggregate breastfeeding rate of 46.3% for Quarter 2 2018/19, based on the final figures published in November 2019.

Breastfeeding prevalence at a PHE centre level can be published for 2 PHE Centres.

Breastfeeding prevalence can be published for 73 local authorities (passing all 3 stages of validation) and percentages range from 23.5% to 82.2%.

This statistical commentary should be considered alongside the Quarter 2 2019/20 Breastfeeding prevalence at 6-8 weeks after birth statistical release, which can be found at https://www.gov.uk/government/statistics/breastfeeding-at-6-to-8-weeks-after-birth-2019-to-2020-quarterly-data.

Please treat the figures with caution: where totals are presented for England and PHE centres, these are aggregate totals of the local authorities that submitted information and passed initial validation.

## Background

In October 2015, the responsibility for commissioning children's public health for the 0-5 years' population transferred from NHS England to local authorities. To support this transfer Public Health England established an interim data collection for a number of key performance indicators associated with these services which it is critical to monitor and report.

The breastfeeding information within this publication has been obtained via the interim reporting system to collect health visiting activity at a local authority resident level. It was submitted to PHE by local authorities on a voluntary basis. It covers Quarter 2 of 2019/20. The full data publication can be found at

https://www.gov.uk/government/statistics/breastfeeding-at-6-to-8-weeks-after-birth-2019-to-2020-quarterly-data.

The decision has been taken to publish this information as 'experimental statistics' on the basis that there has been a significant change to the reporting methods, both in units of collection and the mandatory/voluntary nature.

#### **Data Collection Method**

An interim reporting system is hosted on the Local Government Association (LGA) website to collect the data on health visiting indicators. The reporting window for Quarter 2 2019/20 data was 18 November to 13 December 2019.

To support local authorities in submitting data, detailed guidance was circulated to explain how analysts and commissioners in local authorities should submit data. This guidance is available at: https://www.gov.uk/government/publications/childrens-public-health-0-to-5-years-national-reporting.

A dedicated mailbox, interimreporting@phe.gov.uk, was also in place to respond to questions and comments.

Once the collection window closes the data received is centrally collated, validated and reported. This process will be repeated quarterly.

**Please note:** in April 2019, Dorset, Bournemouth and Poole upper tier local authorities merged to form two new upper tier local authorities, Dorset and Bournemouth, Christchurch and Poole. The total number of local authorities providing interim reporting data to Public Health England has changed from 150 to 149.

## **Data Quality Findings**

The following data relates to Quarter 2 2019/20.

146 reporting local authorities submitted a return for the interim reporting collection for Quarter 2 2019/20. The 3 local authorities that did not submit data are Bolton, Cumbria and Lambeth.

A set of three validation rules was applied in order to calculate the breastfeeding measure.

#### Stage 1 Validation

**Definition**: Local authorities to submit integers for the 'number of infants totally breastfeeding at 6-8 weeks' and/or the 'number of infants partially breastfeeding at 6-8 weeks' and the combined total must be lower than or equal to the integer for the 'number of infants due a 6-8 week check'. If there are DK "Don't Knows" in the combined total or the denominator the local authority will automatically fail validation.

145 local authorities successfully passed stage 1 validation by providing information on the number of infants recorded as being totally or partially breastfed at 6-8 weeks after birth.

The local authority that failed stage 1 validation is:

Local Authority	PHE Centre
Lancashire	North West

The values for local authorities that did not pass stage 1 validation are excluded from their respective PHE centre and the England aggregated calculations.

#### Stage 2 Validation

**Definition:** The value submitted for infants due a 6-8 week review must be within 20% of the resident population of babies aged zero for that local authority. The annual figure is divided by four to provide a quarterly estimate. Any values within 20% tolerance of the mid-year population figure for the quarter will pass this check.

Of the 145 submissions that passed stage 1 validation, 141 went on to pass stage 2.

The 4 local authorities that failed stage 2 validation are:

Local Authority	PHE Centre
Hartlepool	North East
South Tyneside	North East
Bradford	Yorkshire and The Humber
Hammersmith and Fulham	London

Please see the section 'Data Quality Notes' towards the end of this commentary which provides further details.

#### Stage 3 Validation

**Definition:** The percentage of infants whose breastfeeding status was recorded must meet the data quality standard of 95%, being between 95% and 100%. This means the sum of those infants totally breastfed, partially breastfeed and not breastfed should be greater than or equal to 95% of the number of infants due a 6-8 week review.

The threshold of 95% coverage applies to local authorities and PHE centres, but for the aggregated England value the threshold is 85%.

Of the 141 submissions passing stage 1 and stage 2 validation, 73 went on to pass stage 3.

The 68 local authorities that failed stage 3 validation are:

Local Authority	PHE Centre
Gateshead	North East
Stockton on Tees	North East
Blackburn with Darwen	North West
Blackpool	North West
Bury	North West
Cheshire West and Chester	North West
Liverpool	North West
St Helens	North West

## **Data Quality Notes**

When making a submission local authorities have the opportunity to enter comments in a free text box to explain any issues with reporting. During the Quarter 2 submission comments were received from 4 local authorities related to breastfeeding data, of collective interest:

There has been an improvement in data quality with more local authorities passing validation.

Where local authorities are unable to separate out 'totally' and 'partially' breastfed (because of local processes or data collection), it is still extremely useful for them to report the combined total, as this forms the numerator of the breastfeeding prevalence indicator. A communication was issued asking local authorities to report the combined total in either the 'total' or 'partial' boxes. On review, the communication should have specified that the total be entered in the 'partial' box as it is known that these infants are at least partially breastfed. Breastfeeding data has been amended to report as 'partially breastfed' where local authorities can be identified as having reported a combined total as 'totally breastfed'. It can therefore be assumed that for higher geographies containing an affected local authority, the aggregate value for 'totally breastfed' is slightly low (and the aggregate value for 'partially breastfed' is correspondingly slightly high), but this is judged to be the most accurate way of describing the situation as the combined percentage will be a true reflection of the submitted data. This affects the following local authorities:

Birmingham, Dudley, South Tyneside and Wolverhampton were identified as having reported a combined total for Quarter 2 2019/20.

2 local authorities reported they knew, or suspected, that they had made an incomplete submission.
