# Methodology Notes

## Methodology

There are 3 releases within the Regional Trade Statistics theme:

- RTS by month: new ad-hoc statistical release, reporting at high level the 4 flows (EU imports, EU exports, ROW imports, ROW exports) for each of the 4 countries (England, Scotland, Wales, Northern Ireland);
- RTS quarterly: full release, reporting on 12 NUTS1 regions, SITC division (2-digit) and 100 pre-defined partner countries in a combination of static and interactive products;
- RTS by local area geographies: annual release that reports on NUTS2 and NUTS3 regions. NUTS2 is reported by SITC section (1-digit) and 100 pre-defined partner countries in separate tables.

RTS data is compiled by merging trade data collected by HMRC with employment data from the Interdepartmental Business Register (IDBR). A business' trade is allocated to a region based on the proportion of its employees employed in that region. Where a trader is not matched with the IDBR, its trade is matched with Office for National Statistics postcode data to obtain the region in which the Head Office of the VAT registered business (importer or exporter) is based.

Not all trade can be assigned to one of the four UK countries. Where appropriate, this is referred to in the tables as the 'Unallocated Trade'. In a quarterly RTS release, Unallocated Trade is split into Unallocated – Known and Unallocated – Unknown but they are combined in this release.

- 'Unallocated – Known': where we have virtually full details of the trade but it is not appropriate to allocate it to a region.
- 'Unallocated – Unknown'

For specific energy goods only, trade is allocated to the region where the goods enter or leave the UK rather than the location / employment of the business doing the trade. This is because HMRC receives details of the trade in these goods directly from grid operators rather than the business. The goods concerned are Electrical energy, Natural Gas in a gaseous state and Crude Oil exported directly from offshore oil rigs. Crude Oil imported to the UK and exported from terminals is still allocated to the region of the business.

All three releases use the same allocation methodology outlined above. More information on the RTS and this release can be found in the [RTS methodology document](#).

## Comparison with OTS and RTS

The following reconciliation table shows the differences at total trade level between OTS and this release by quantifying the elements of OTS that are excluded from this release.

### Reconciliation Table: November 2019

	EU Exports	Non-EU Exports	EU Imports	Non-EU Imports
<b>This Release</b>	12,722.0	14,934.3	20,386.2	17,934.7
Allocated to a country	12,078.3	13,154.7	19,072.1	16,055.3
Unallocated region	643.7	1,779.7	1,314.0	1,879.5
<b>Late response estimates</b>	490.1	-	556.6	
<b>Non-monetary gold</b>	42.0	1,813.9	114.4	4,896.6
<b>OTS Total</b>	13,254.1	16,748.3	21,057.2	22,831.4

Note 1: There may be rounding differences between the total shown and the sum of its components.

Note 2: Late Response estimates are for EU trade only. This will reduce over time. They are excluded from RTS trade and this release.

Note 3: Non-Monetary Gold is excluded from RTS trade and this release.

Note 4: 2019 data is provisional and subject to updates.

## Governance

Currently these statistics are labelled as ad-hoc. The reasons for this are:

- to enable us to identify whether there is a need and public interest in the publication;
- to allow us to build in improvements to the methodology, data included, visuals, etc.;
- to allow external users to provide feedback on the publication so that enhancements can be made to future releases.

HMRC applies Statistical Disclosure Control (SDC) on all its statistical releases to protect our data providers. Therefore requests for data relating to other geographies or greater disaggregation, e.g. partner countries or types of goods traded cannot be provided.

This release will be produced for 6 months (January to June 2020), HMRC will then review any further publications.
