

A close-up photograph of a baby's face, smiling broadly with its mouth open, showing its tongue. The baby has dark eyes and is looking towards the camera. The background is plain white.

Protecting your baby against meningitis and septicaemia

Know the signs and symptoms!

MenB vaccine is part of the NHS childhood immunisation programme

This vaccine is given with other routine vaccinations at two and four months with a booster at 12 months. **Make sure your baby is fully protected by having all their vaccines as soon as they are eligible.**
