Protecting and improving the nation's health

Suspected and laboratory confirmed reported norovirus outbreaks in hospitals (England) and norovirus laboratory reports (England and Wales): weeks 44 to 48, 2019

Health Protection Report
Volume 14 Number 2
28 January 2020

Please note the [Hospital Norovirus Outbreak Reporting System website](#) was relaunched on Monday 7 October 2019 after going offline in May 2019. During this time data on hospital outbreaks was manually collated.

HNORS users have been encouraged to retrospectively report any outbreaks which may have occurred during this period, to ensure ascertainment is consistent with the period prior to HNORS going offline.

Suspected and laboratory confirmed reported norovirus outbreaks in hospitals: outbreaks occurring in weeks 44 to 48, 2019 (England)

There were 62 reported outbreaks which occurred between weeks 44 and 48 2019, 58 of which (94 per cent) led to ward/bay closures or restrictions to admissions and 52 of which (84 per cent) were recorded as laboratory confirmed due to norovirus. From week 01 (week beginning 31 December 2018) to week 48 (week beginning 25 November 2019), 258 outbreaks have been reported. Eighty-nine percent (229) of reported outbreaks resulted in ward/bay closures or restrictions to admissions and seventy-six per cent (196) were laboratory confirmed as due to norovirus.

Suspected and laboratory-confirmed reported norovirus outbreaks in hospitals in England, with regional breakdown: outbreaks occurring in weeks 01-48 2019

PHE Centre	Outbreaks between weeks 44-48/2019			Outbreaks between weeks 01-48/2019		
	Outbreaks	Ward/bay closure †	Lab confirmed	Outbreaks	Ward/bay closure †	Lab confirmed
East of England	-	-	-	-	-	-
East Midlands	14	13	14	28	27	22
London	5	5	3	6	5	3
North East	7	6	6	35	31	31
North West	6	6	6	37	36	32
South East	10	10	9	40	40	35
South West	10	8	8	68	47	48
West Midlands	8	8	4	35	34	15
Yorkshire and Humberside	2	2	2	9	9	9
Total	62	58	52	258	229	196

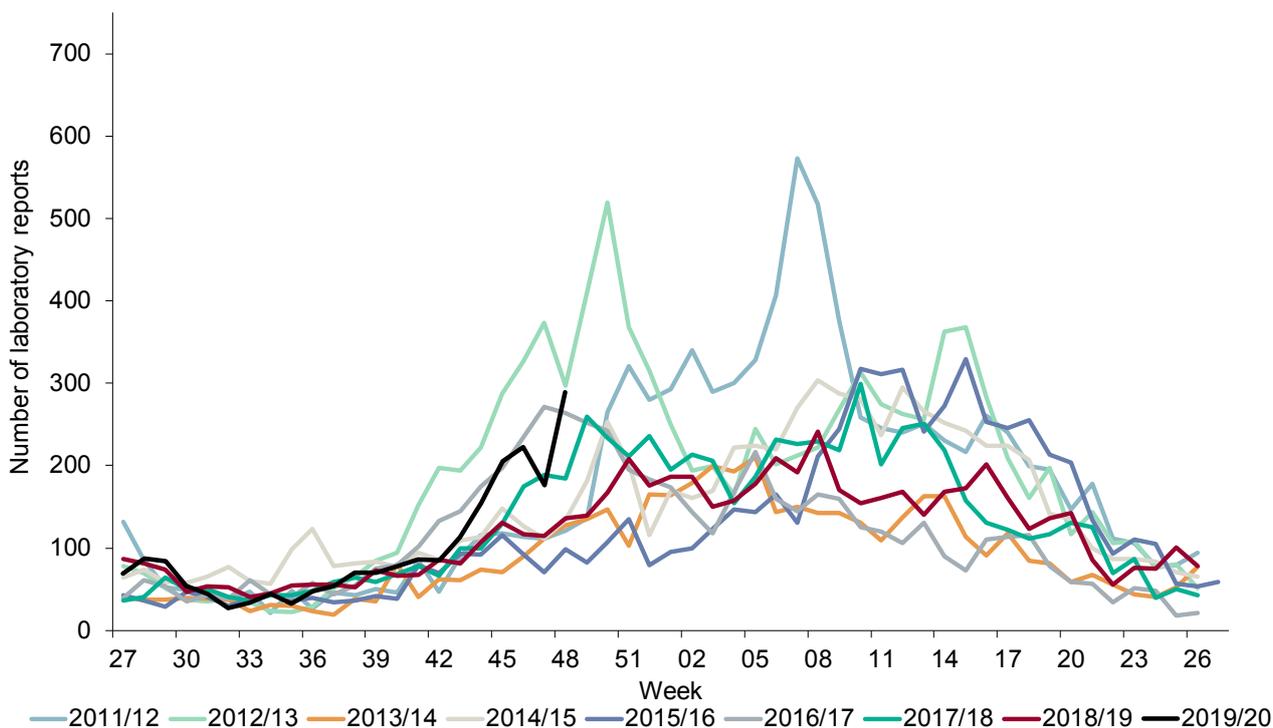

† Note: not all outbreaks result in whole wards closures, some closures are restricted to bays only

Norovirus laboratory reporting: data from SGSS (England and Wales)

From week 01, 2019 to week 48 2019 there were 5993 laboratory reports of norovirus. This is 3 per cent higher than the average number of laboratory reports for the same period in the five years between 2014 and 2018 (5935). Norovirus activity from weeks 44 to 48 of the 2019/20 season was 44 per cent higher than the five season average for this five week period (2014/15 to 2018/19).

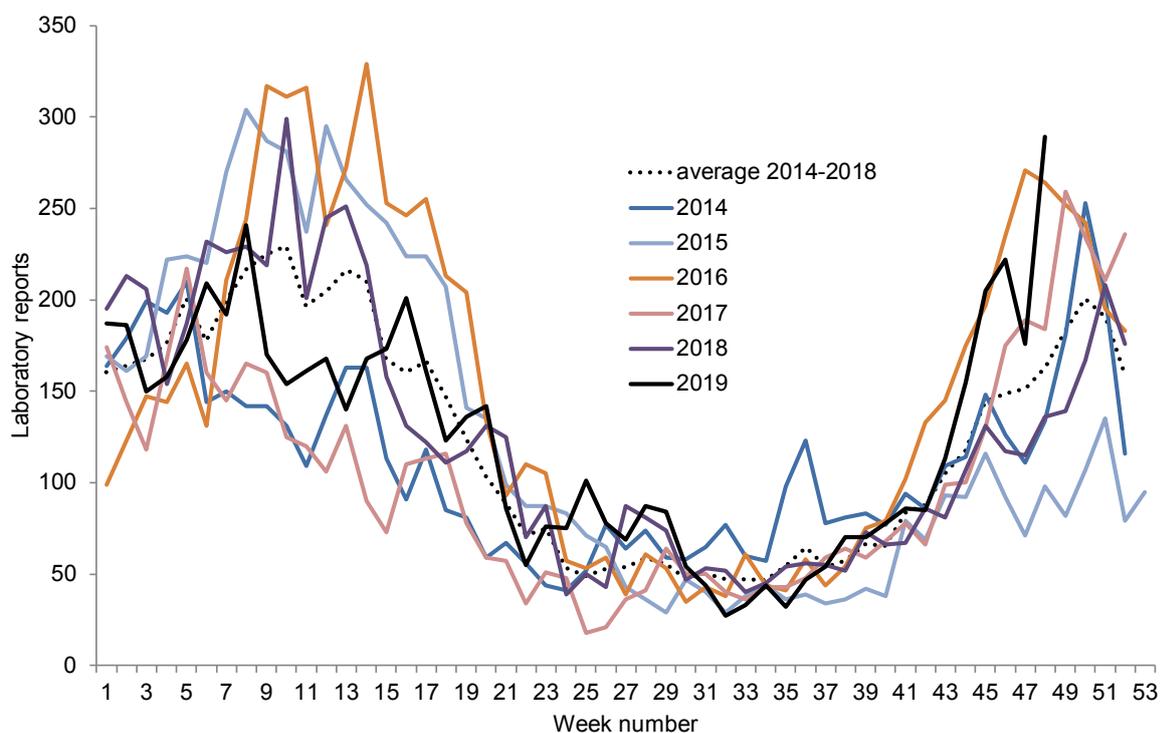

Note: Data from laboratory reporting are subject to a reporting delay and the number reported in the most recent weeks is likely to rise as further laboratory reports are received.

Figure 1 Seasonal comparison of laboratory reports of norovirus 2011/12-2019/20 (England and Wales)

Note. The norovirus season runs from week 27 in year 1 to week 26 in year 2, i.e. week 27 2019 – week 26 2020 July to June, in order to capture the winter peak in one season.

About Public Health England

Public Health England exists to protect and improve the nation's health and wellbeing, and reduce health inequalities. We do this through world-class science, research, knowledge and intelligence, advocacy, partnerships and the delivery of specialist public health services. We are an executive agency of the Department of Health, and are a distinct delivery organisation with operational autonomy to advise and support government, local authorities and the NHS in a professionally independent manner.

About Health Protection Report

Health Protection Report is a national public health bulletin for England and Wales, published by Public Health England. It is PHE's principal channel for the dissemination of laboratory data relating to pathogens and infections/communicable diseases of public health significance and of reports on outbreaks, incidents and ongoing investigations.
