Year: 2020 Week: 09

Summary.

[Subscribe to the weekly syndromic surveillance email](#)

Reporting week: 24 February to 01 March 2020.

During week 9, NHS 111 calls for cold/flu, cough and sore throat indicators increased. However, these data should currently be interpreted with caution due to the national media coverage of the COVID-19 incident and the potential subsequent impact on the number of callers. Respiratory indicators in other systems including pneumonia in GP in-hours and EDs remain stable.

Remote Health Advice:

NHS 111 calls for cold/flu, cough and sore throat indicators increased during week 9, particularly amongst younger adult age groups (figures 2c & 4a & 6). However, these data should currently be interpreted with caution due to the national media coverage of the COVID-19 incident and the potential subsequent impact on the number of NHS 111 callers.

[Access bulletin](#)

GP In Hours:

Mumps consultations increased during week 9, and remain above baseline levels, particularly in the 5-14 and 15-44 years age group (figures 12 & 12a).

[Access bulletin](#)

During week 9, GP consultations for respiratory indicators, including lower respiratory tract infection and pneumonia remain stable, or decreasing, and below seasonally expected levels (figures 5 & 6).

GP Out of Hours:

During week 9, there was a small increase in influenza-like illness consultations (figure 3), particularly in the younger adult age groups (figure 3b).

[Access bulletin](#)

Emergency Department:

During week 9, ED attendances for pneumonia decreased, though are above baseline levels (figures 8 & 8a). All other respiratory indicators remained at, or below seasonally expected levels (figures 4-9).

[Access bulletin](#)

Ambulance:

During week 9 overdose/ingestion/poisoning calls increased and are above baseline levels (figure 7).

04 March 2020

- Key messages are provided from each individual system.
- The different PHE syndromic surveillance systems access data from different areas of the national health care system.
- Each syndromic surveillance system is able to monitor a different selection of syndromic indicators based upon a different case mix of patients.
- Access to the full version of each syndromic surveillance bulletin is available through the PHE Syndromic Surveillance website found at: (<https://www.gov.uk/government/collections/syndromic-surveillance-systems-and-analyses>); reports are made available on Thursday afternoons.

Remote Health Advice Syndromic Surveillance System:

A remote health advice syndromic surveillance system that monitors syndromic calls from remote health advice services e.g. NHS 111 each day across England.

GP In-Hours Syndromic Surveillance System:

A large general practitioner surveillance system monitoring daily consultations for a range of clinical syndromic indicators across England.

GP Out-of-Hours Syndromic Surveillance System (GPOOHS):

A syndromic surveillance system monitoring daily GP out-of hours activity and unscheduled care across England using a range of clinical syndromic indicators.

Emergency Department Syndromic Surveillance System (EDSSS):

A national ED network across England monitoring daily attendances and presenting symptoms/diagnoses.

National Ambulance Syndromic Surveillance System (NASSS):

The national ambulance syndromic surveillance system (NASSS) monitors daily calls made by persons to an ambulance trust. All 10 ambulance trusts in England provide data.

We thank and acknowledge the contribution of all data providers including:

- NHS 111 and NHS Digital.
 - QSurveillance®; University of Oxford; EMIS/EMIS practices; ClinRisk®.
 - TPP, ResearchOne and participating SystemOne GP practices.
 - Advanced Health & Care and the participating OOH service providers.
 - Participating EDSSS emergency departments.
 - Royal College of Emergency Medicine.
 - North East, North West, Yorkshire, East Midlands, West Midlands, East of England, London, South East Coast, South Central, and South Western NHS Ambulance Trusts and The Association of Ambulance Chief Executives.
