Syndromic Surveillance System: England

03 June 2020	Year: 2020 Week: 22				
In This Issue: Key messages	Key messages Data to: 31 May 2020				
Syndromic indicators at a glance Data summary	During week 22, COVID-19-like ambulance calls remained stable (figure 2).				
Indicators by syndrome:	Calls for falls/back injuries and overdose/ingestion/poisoning have increased and are now similar to baseline levels (figures 5 & 8).				
Total syndromic calls COVID-19-like Breathing problems					
Heat/cold exposure Falls/ back injuries - traumatic	Please see the <u>notes for information</u> about the COVID-19-like syndromic indicator including important caveats around the interpretation of this indicator.				

Syndromic indicators at a glance:

Indicator		Calls*	Trend [†]	Level [‡]
COVID-19-like		7,793	no trend	-
Breathing problems		8,475	decreasing	below baseline levels
Heat/ cold exposure		42	no trend	similar to baseline levels
Falls/ back injuries - traumatic		12,937	increasing	similar to baseline levels
Cardiaa	Cardiac/ respiratory arrest	1,833	no trend	above baseline levels
Cardiac	Chest pain	6,941	no trend	below baseline levels
Overdose/ ingestion/ poisoning		3,357	increasing	similar to baseline levels
Unconscious/ passing out		5,879	increasing	below baseline levels
	Chest pain ngestion/ poisoning	6,941 3,357	no trend increasing	below baseline levels similar to baseline leve

* Number of syndromic calls received by PHE in the reporting week

[†] Trend is defined as the overall activity over the last few weeks

[‡] Current activity in comparison to historical baselines, which have been constructed using data from 1 January 2018

Ambulance

03 June 2020	Year: 2020 Week: 22						
COVID-19-like ambulance calls:	 During March 2020 ambulance trusts started using a 'Pandemic/Epidemic/Outbreak' triage card to assess potential COVID-19 patients. Calls using this 'Pandemic' triage are now presented in this bulletin as 'COVID-19-like' calls. 						
	• When the Pandemic triage was introduced the number of syndromic indicator calls e.g. breathing problems decreased, reflecting the increased use of the pandemic triage.						
	 Please note that these ambulance calls are not an absolute count of COVID-19 cases assessed by ambulance trusts: not all ambulance trusts use the Pandemic triage card; other chief complaint categories and local codes are also used to triage potential COVID- 19 patients. 						
	• The 'COVID-19-like' call data presented in this bulletin should therefore be used to						
Introduction to charter	monitor trends in calls and not numbers.						
Introduction to charts:	 A 7-day moving average (adjusted for bank holidays) is overlaid on the daily data reported in each chart, unless specified. 						
	 Baselines have been constructed using historical data since 1 January 2018. 						
Notes and further	• National ambulance syndromic surveillance (NASS) call data are analysed by the Real- time Syndromic Surveillance Team (ReSST) on a daily basis to identify national and regional trends. A statistical algorithm underpins each syndromic surveillance system, routinely identifying activity that has increased significantly or is statistically significantly high for the time of year. Results from these daily analyses are assessed by the ReSST, along with analysis by age group, and anything deemed of public health importance is alerted by the team.						
information:	Coverage						
	Coverage:						
	 Total syndromic calls includes all calls where the chief presenting complaint can be mapped to one of the syndromic indicators monitored by Public Health England. 						
	 Some indicators are not routinely presented in this report. 						
	• Total syndromic calls is lower than the total number of calls received by ambulance trusts.						
	Description of included NASS indicators:						
	 Breathing Problems: persons finding it difficult to breathe. 						
	Heat/Cold Exposure: heat or cold exposure.						
	 Falls/Back Injuries - traumatic: persons falling or having a back injury. 						
	 Cardiac/Respiratory Arrest: persons who have stopped or have ineffective breathing or/and no pulse. 						
	Chest Pain: persons experiencing chest pain or chest discomfort.						
	Overdose/Ingestion/Poisoning: overdoses, ingestion of a substance or poisoning.						
	Unconscious/Passing out: persons who are unconscious, not alert or fainting.						
Acknowledgements:	We would like to thank:						
	 North East, North West, Yorkshire, East Midlands, West Midlands, East of England, London, South East Coast, South Central, and South Western NHS Ambulance Trusts for submitting anonymised, daily data to the National Ambulance Syndromic Surveillance system. 						
	 The Association of Ambulance Chief Executives for their support in establishing this system.
