Year: 2020 Week: 24

## Summary.

[Subscribe to the weekly syndromic surveillance email](#)

### Reporting week: 08 June to 14 June 2020.

During week 24, community-based respiratory indicators, including 'COVID-19-like' indicators, decreased or remained stable across all syndromic surveillance systems.

Please see the 'notes and caveats' sections in each individual syndromic surveillance bulletin for information about 'COVID-19-like' syndromic indicators, including important caveats around the interpretation of these indicators.

#### Remote Health Advice:

[Access bulletin](#)

During week 24, NHS 111 'potential COVID-19' telephone calls and completed web assessments continued to be stable nationally and across all age groups and PHE Centres (figures 2a-c & 3a-c). Other syndromic indicators are now increasing due to changes in the NHS 111 telephony system where callers who are assessed as having probable COVID-19 symptoms are now triaged using standard symptom specific pathways which are included in our routine syndromic indicators.

#### GP In Hours:

[Access bulletin](#)

During week 24, COVID-19-like GP consultations remained stable; rates continue to be highest in the 75+ years age group (figures 1 & 1a). All other respiratory indicators remained stable and below baseline levels.

#### GP Out of Hours:

[Access bulletin](#)

During week 24, influenza-like illness consultations decreased but remained just above baseline levels (figure 3).

#### Emergency Department:

[Access bulletin](#)

During week 24 the overall number of ED COVID-19-like attendances decreased nationally (figure 3).

Please note that the level of diagnosis coding included in the data received has increased from approximately 70% of attendances prior to April 2020, to approximately 75% of attendances from April 2020 onwards. This may cause overall attendances of individual

#### Ambulance:

[Access bulletin](#)

During week 24, COVID-19-like and breathing problems ambulance calls remained stable (figures 2 & 3).

16 June 2020

- Key messages are provided from each individual system.
- The different PHE syndromic surveillance systems access data from different areas of the national health care system.
- Each syndromic surveillance system is able to monitor a different selection of syndromic indicators based upon a different case mix of patients.
- Access to the full version of each syndromic surveillance bulletin is available through the PHE Syndromic Surveillance website found at: (<https://www.gov.uk/government/collections/syndromic-surveillance-systems-and-analyses>); reports are made available on Thursday afternoons.

---

## **Remote Health Advice Syndromic Surveillance System:**

*A remote health advice syndromic surveillance system that monitors syndromic calls from remote health advice services e.g. NHS 111 each day across England.*

## **GP In-Hours Syndromic Surveillance System:**

*A large general practitioner surveillance system monitoring daily consultations for a range of clinical syndromic indicators across England.*

## **GP Out-of-Hours Syndromic Surveillance System (GPOOHS):**

*A syndromic surveillance system monitoring daily GP out-of hours activity and unscheduled care across England using a range of clinical syndromic indicators.*

## **Emergency Department Syndromic Surveillance System (EDSSS):**

*A national ED network across England monitoring daily attendances and presenting symptoms/diagnoses.*

## **National Ambulance Syndromic Surveillance System (NASSS):**

*The national ambulance syndromic surveillance system (NASSS) monitors daily calls made by persons to an ambulance trust. All 10 ambulance trusts in England provide data.*
