## Chesil Beach and Stannis Ledges MCZ

### Feature Map

May 2019

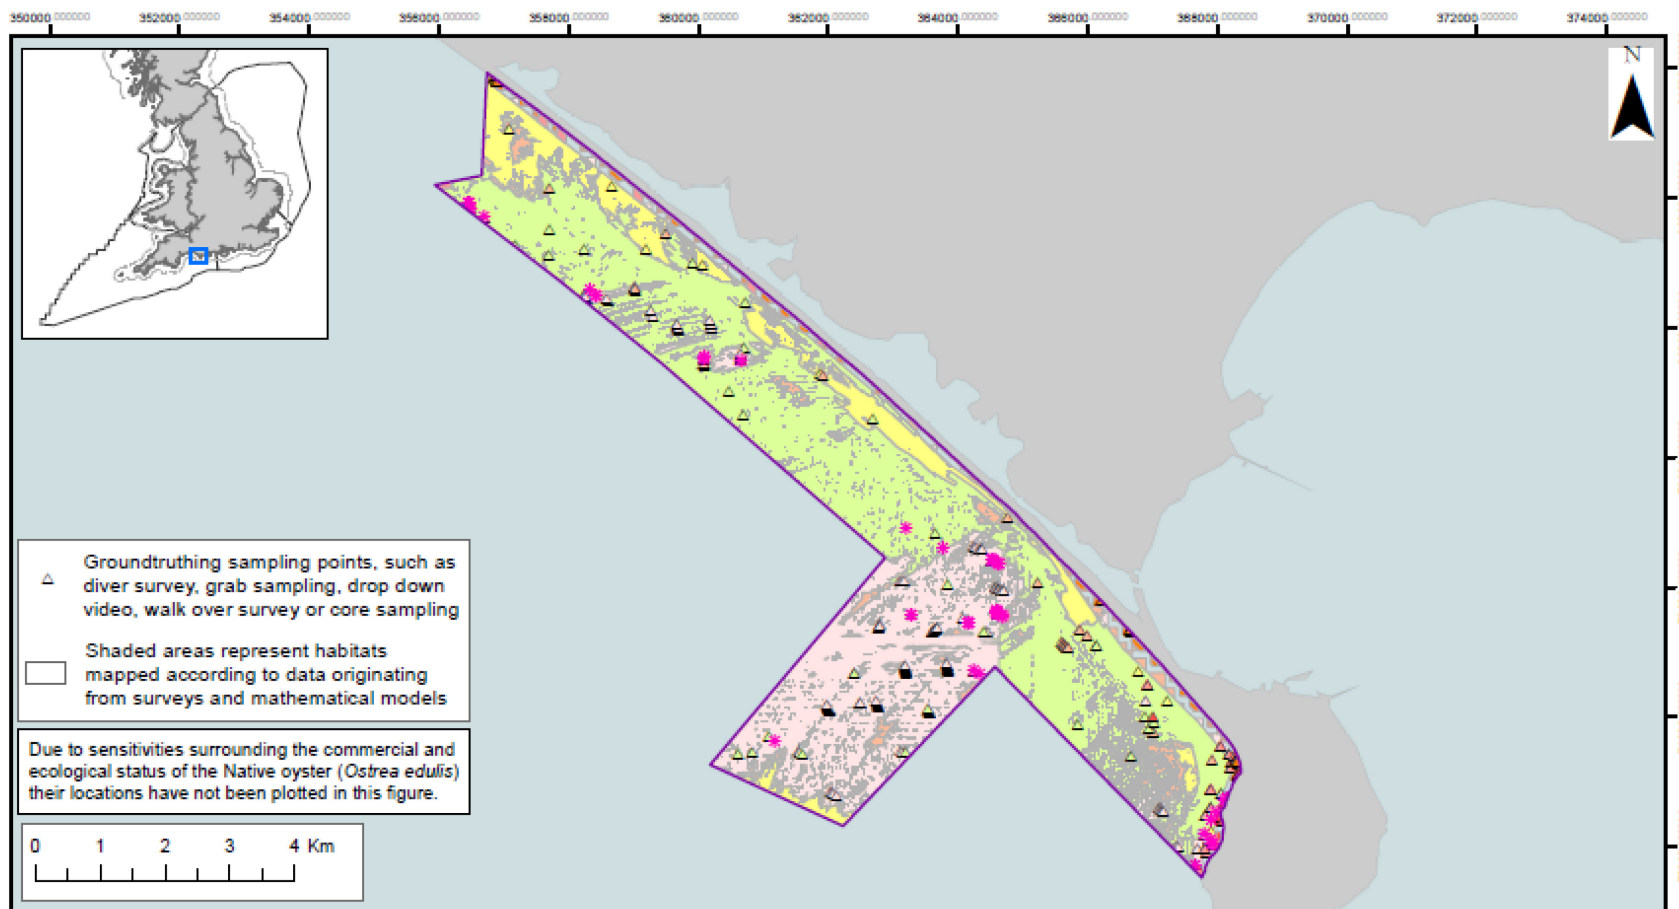

The following map shows where the features protected by this Marine Conservation Zone (MCZ) are located.

There is one map showing the broad-scale habitats and the features of conservation importance. Broad scale habitats represent habitats, and associated species that live on and in the habitat. Features of conservation importance are specific habitats and species that are known to be rare, threatened or declining in our seas.

A range of different types of surveys have been used to create these maps. The symbols on the map show where a sample has been taken, or where a feature has been recorded in a specific location. For many features, there is also shading to show the extent of the area in which the feature is found. For the broad scale habitat maps, this is created from survey data and using mathematical models. On the FOCI maps, the extent is only shown where a survey has confirmed that the feature exists in this whole area. More detailed information on the techniques used and the features themselves can be found here:

<http://publications.naturalengland.org.uk/publication/5703660445368320>

Mapped data on features correct at the time of publishing, for the most up to date feature data please consult the MAGIC website (<https://magic.defra.gov.uk/>).

### Chesil Beach and Stennis Ledges MCZ

- Marine Conservation Zone
- Regional MCZ Project Area
- 12nM Territorial Seas Limit
- Sea
- Land

#### Features designated in 2013 and 2016

- High energy intertidal rock (A1.1)
- Intertidal coarse sediment (A2.1)
- High energy infralittoral rock (A3.1)
- Pink sea-fan (*Eunicella verrucosa*)

#### Features designated in 2019

- High energy circalittoral rock (A4.1)
- Subtidal coarse sediment (A5.1)
- Subtidal sand (A5.2)
- Subtidal mixed sediments (A5.4)
