Dart Estuary Marine Conservation Zone

This document sets out why this site is important, the features protected and general management information.

Overview

This site became a Marine Conservation Zone (MCZ) in May 2019. This means that specific features within this area are protected and, where necessary, regulators will manage marine activities.

Where is the site?

The Dart Estuary MCZ is an inshore site that covers an area of approximately 5 km². The site is located in south Devon and encompasses the upper part of the Dart Estuary down to Anchor Stone, south of Dittisham.

Why is the site important?

MCZs, together with other types of marine protected areas, will form the UK contribution to an international network of protected sites in the north east Atlantic. The network will help to deliver the government's vision of clean, healthy, safe, productive and biologically diverse oceans and seas. MCZs protect typical, rare or declining habitats and species found in our seas.

The Dart Estuary MCZ supports a diverse array of habitats and species, including a number of rare species. Estuaries are important contributors to a healthy environment and have an important role as a nursery ground for juvenile fish. Large areas of the site consist of intertidal mud, which is a highly productive habitat and provides feeding and resting grounds for wading and migratory birds. This is also an important habitat for the nationally scarce tentacled lagoon worm. This is a tiny bristleworm which grows up to 5 mm in length and creates and lives in tubes within the mud habitats of the estuary. These worms have tentacles around their mouths used for gathering food from the surrounding muddy sediments. The tentacled lagoon worm is particularly vulnerable to activities that cause changes in its habitat.

The north of the site contains areas of coastal saltmarshes and reed beds. These provide a refuge for wading birds during high tide and storms and are home to a wide variety of worms, molluscs and crustaceans living in the damp environment between the vegetation.

Estuarine rocky habitats form in flooded river valleys or 'rias', such as the Dart, and provide a hard surface for animals and seaweeds to attach to in areas dominated by sandy and muddy environments. The seaweed species that attach themselves to the rocks form foraging areas for crustaceans (such as crabs) and birds at low tide as well as foraging areas and a refuge for juvenile fish at high tide.

Designation of this site as a Marine Conservation Zone protects the following features. You can find detailed information about each feature at http://jncc.defra.gov.uk/page-4527.

Protected features	General management approach
Coastal saltmarshes and saline reedbeds	Maintain in favourable condition
Tentacled lagoon-worm (Alkmaria romijni)	
Estuarine rocky habitats	Recover to favourable condition
Intertidal mud	
Low energy intertidal rock	

Management of the site

Now that this site has been designated, some activities may need additional management. Activities and the management measures used to regulate them may need to change if new evidence becomes available.

Most marine activity is already regulated by the relevant regulatory bodies. There is an existing legal framework that regulators use to manage fishing, coastal development, recreation and pollution. This also applies in MCZs.

Regulators will manage each site according to the features and activities in, or near, a specific area. Management measures will be implemented at sites most at risk of damage first, regulating only those activities which have a detrimental impact on the designated features. Any management measures that are required for MCZs will be applied on a case-by-case basis.

Management in MCZs can take several different forms, including introducing voluntary measures, use of the existing planning and licensing framework, specific byelaws and orders. There has to be public consultation on permanent byelaws and orders. For activities that already need a marine licence, regulators consider the MCZ in their decision as soon as the site is consulted on. Find out more about marine licensing in MCZs at https://www.gov.uk/government/publications/marine-conservation-zones-mczs-and-marine-licensing.

Regulators

This table lists the authorities responsible for MCZs and the activities they manage.

Lead regulator	What it manages
Inshore Fisheries and Conservation Authorities (IFCAs) http://www.association-ifca.org.uk	 Fisheries in the inshore area (0-6 nautical miles (nm)) including commercial fisheries and recreational sea angling.
Marine Management Organisation (MMO)	 Fisheries within British limits around the coast of England.
https://www.gov.uk/government/organisations/marine-management-organisation	 Licensable activities such as construction, alteration or improvement of works, dredging and disposal, other removals or deposits, incineration or the scuttling of vessels within England's marine area. Section 36 (of the Electricity Act 1989) Consents and Safety Zones for offshore renewable energy installations producing up to 100MW.
	Activities requiring a marine wildlife licence.
Environment Agency (EA)	Fisheries for migratory and freshwater fish.
https://www.gov.uk/government/orga	Coastal protection and flood management.
nisations/environment-agency	 Water quality, including environmental permits for discharges from terrestrial sources.

Oil and Gas Authority https://www.ogauthority.co.uk/	Licensing for exploration and exploitation of oil and gas reserves.
Department for Business, Energy and Industrial Strategy (BEIS) https://www.gov.uk/government/organisations/department-for-business-energy-and-industrial-strategy	Oil and gas related activities Renewable energy related activities
Offshore Petroleum Regulator for Environment and Decommissioning (OPRED) – Part of BEIS	Environmental approvals and consents for offshore oil and gas related activities, Carbon Capture and Storage and Gas Unloading and Storage, and decommissioning activities.
Harbour Authorities and Local Planning Authorities	 Harbour authorities have management responsibilities for ports and coastal waters within their limits. Local planning authorities manage activities at the coast. These include coastal recreation, public rights of way (including the English Coastal Path), tourism, economic regeneration, flood protection, and planning and development on coasts and estuaries, including aquaculture in the intertidal zone.
Department for Transport (DfT) https://www.gov.uk/government/organ nisations/department-for-transport	 Policy on environmental impacts associated with ports and shipping, including pollution from ships. Policy on maritime safety including navigation safety.
Maritime and Coastguard Agency (MCA) - An Executive Agency of the Department for Transport https://www.gov.uk/government/organisations/maritime-and-coastguard-agency	Vessel safety consents, including certification of seafarers and equipment.
Natural England (NE) https://www.gov.uk/government/orga nisations/natural-england	 Establishment and management of the English Coastal path. Activities requiring consents and ascents within or adjacent to Sites of Special Scientific Interest (SSSIs). Activities requiring wildlife licences for terrestrial and intertidal species.
The Planning Inspectorate https://www.gov.uk/government/organ nisations/planning-inspectorate	 Activities requiring Development Consent Orders under the Planning Act 2008, regarded as Nationally Significant Infrastructure Projects
