

Being responsible won't break the bank

Get your **basic biosecurity kit**

Long handle brush
Hoof pick
Water container
Flexible bucket

Total: £20

Disinfectants

Propellar and Cleankill Sanitising Spray are both known to be effective against *Phytophthora* species and other harmful tree and plant pathogens.

Propellar can be used on metal tools to reduce the risk of rusting. Propellar must be stored in a flame proof container.

Cleankill Sanitising Spray can be used on boots and outer wear to reduce the risk of damage to their fabric and glue.

The least hazardous option should always be selected unless there are very good reasons otherwise.

In this case the Generic Control of Substances Harmful to Health (COSHH) assessments show that Cleankill Sanitising Spray has lower volatility, flammability and toxicity and therefore poses the lesser risk. COSHH assessments have been carried out for both products. Safety data sheets for both products are included with these assessments.
