Pelvis: no trace of fracture.

The upper limbs: no trace of fracture

The lower limbs: no trace of fracture

Comments:

Conclusion:

1. It appeared from the autopsy marks seen on the corpse of deceased Saeed Shabram that the reason of death was drowning.
2. We saw a number of excoriations in the upper limbs and the back as described in the external damages section. They did not appear to have any connection to the cause of death. No other evidences were seen on the corpse.
