I.23.			I.24. For Export <input type="checkbox"/>		
I.25. Identification of the commodities					
HS Code and Title	Processing Plant	Product Description	Animal Species	Date of Production	

II. Health Information

I, the undersigned official veterinarian after due inquiry and to the best of my knowledge, do hereby certify that the products described within this certificate and with the Import Permit number and the Seal number referenced on this certificate's first page, meet all the conditions laid down in the health attestations below:

- II.1. The products were only produced and exported to Canada by the producer and exporter identified in the Import Permit and mentioned on this certificate's first page.
- II.2. The certified rendered products were produced:
- (1) either [II.2.1. In a dedicated facility that does not receive, process or store any ruminants and things derived from ruminants, and the product has been prepared, processed, packaged, stored, shipped and otherwise handled in a manner to avoid contamination with any ruminant tissues or things derived from ruminants,]
 - (1) or [II.2.1. on a dedicated line from receipt of raw material to final packaging and storage with no risk of cross contamination with any ruminants and things derived from ruminants, and the product has been prepared, processed, packaged, stored, shipped and otherwise handled in a manner to avoid contamination with any ruminant tissues or things derived from ruminants (if the facility has ineligible materials on the premises, all rendered products for export to Canada must be produced on a totally dedicated line.)]
- II.3. In the case of rendered products derived from terrestrial animals, the animal products and by-products used in the certified rendered products were obtained only from carcasses or parts of carcasses subjected to ante and post-mortem inspection.
- II.4. None of the animals from which any of the unprocessed or processed animal-origin products and/or by-products used to manufacture the rendered products are derived from premises that were under any official restrictions by the United Kingdom competent veterinary authority for any serious epizootic disease to which the species from which the product or by-product was derived is susceptible and can be transmitted by the untreated product or by-product and none of the animals from which the animal origin raw materials are derived were under movement restrictions for or were culled or eradicated as part of a disease response for any reportable disease as defined by Canada ⁽²⁾.
- II.5. The raw materials used to produce the rendered products have been transported in dedicated vehicles.
- II.6. The raw materials used to produce the meal have been reduced to a maximum particle size of 50 mm before being heated:
- (1) either [II.6.1. under saturated steam conditions to a temperature of not less than 133°C for a minimum of 20 minutes at an absolute pressure of 3-bar]
 - (1) or [II.6.1. to reach a temperature of not less than 70°C for a minimum of 30 minutes]
- II.7. In the case of fish meal, the rendered products have a moisture content of less than 10%.
- II.8. Each shipment to Canada has been tested negative for the presence of ruminant DNA with a PCR method, in an accredited laboratory.
- II.9. The finished product is placed in tightly sealed waterproof/leak-proof bags or cleaned and disinfected containers that prevents cross contamination with any unfinished product, and is stored and otherwise handled in a manner to avoid contamination with any tissues or things of a lesser zoosanitary status.
- II.10. The product label bears the following statement "The product does NOT contain prohibited material, as defined by section 162 of the Canadian Health of Animals Regulations ⁽³⁾.
- II.11. Every precaution was taken during the handling, processing, packaging, storage and shipping to prevent direct or indirect contact of the product with any animal product or by-product of a lesser zoosanitary status.

Notes

All pages must be presented at least in English and/or French. The official stamp and the signature of the official veterinarian must appear on each separate sheet, including any attached lists. The signature and the stamp must be in a different colour to that of the printing.

Part I:

- Box reference I.1.: Indicate the details of the exporter.
- Box reference I.2.: Indicate the unique reference number.
- Box reference I.5.: Indicate the details of the importer.
- Box reference I.6.: Indicate the CFIA Import Permit number
- Box reference I.11.: Place of origin: name and address of the dispatch establishment.
- Box reference I.15.: Indicate the names of the ships and, if known, the flight numbers of aircraft.
- Box reference I.18.: For containers or boxes, the container number and the seal number should be included
- Box reference I.19.: Indicate total gross weight and total net weight.
- Box reference I.22.: Commodities certified for must identify the end use.
- Box reference I.25.: HS code and title: Use the appropriate Harmonized System (HS) code under the following headings: 0511, 3002, 3502, 2301
- Processing plant: Indicate the establishment approval number.
- Description of product: As per Import permit
- Animal species: All but ruminants
- Date of production: Shall be indicated in the following format: dd/mm/yyyy

Part II:

- (1) Delete as appropriate
- (2) The CFIA list of diseases that are reportable in Canada can be found on the CFIA website: Animal Health Status By Disease - Animals - Canadian Food Inspection Agency. The CFIA accepts the OIE classification of BSE Risk Status: List of BSE risk status: OIE - World Organisation for Animal Health.
- (3) Where the product is destined for use in livestock feed, it is approved for use and listed in Schedule IV of the Feeds Regulations and is labelled as required by the Feed Regulations, which have been captured here: https://ec.europa.eu/food/safety/international_affairs/agreements/export-library_en
