

## **Counter Terrorism Protective Security Advice**

for Major Events

produced by

"Copyright in this guide is (except where expressly stated held by third parties) vested in the Association of Chief Police Officers of England and Wales and Northern Ireland, but ACPO recognises that recipients may want to reproduce some or all of the guide for the purpose of informing, training or otherwise assisting their staff, customers, contractors, tenants and others with whom they deal in running their operations. ACPO therefore grants, to all in receipt of this guide, a royalty-free non-exclusive non-sub licensable right to reproduce all or any part of it provided that each of the following conditions is met: (1) the National Counter-Terrorism Security Office (NaCTSO) must be consulted before any reproduction takes place; (2) reproduction must be for the purpose set out above and for no other purpose; (3) no part of this guide may appear as or in any advertisement or other promotional material; (4) no charge may be made to any person receiving any reproduced material; (5) no alteration may be made in the course of reproduction save for alteration to font, font size or formatting; and (6) the reproduced material must be accompanied by a statement clearly acknowledging ACPO as the source of the material."

### foreword

The National Counter Terrorism Security Office (NaCTSO), on behalf of the Association of Chief Police Officers, Terrorism and Allied Matters (ACPO TAM), works in partnership with MI5 - the Security Service to reduce the impact of terrorism in the United Kingdom by:

- Protecting the UK's most vulnerable and valuable sites and assets.
- Enhancing the UK's resilience to terrorist attack.
- Delivering protective security advice across the crowded places sectors.

#### NaCTSO aims to:

- Raise awareness of the terrorist threat and the measures that can be tak mitigate the effects of an attack.
- Co-ordinate national service delivery of protective security advice brough the Conter Terrorism Security Advisor (CTSA) network and monitor its effectiveness.

ks and

- Build and extend partnerships with communities, police and stakeholders.
- Contribute to the development of Counter Terrorisment and adv

### one introduction

This guide is intended to give protective security advice to those who are responsible for organising major events and event security, irrespective of size and capacity and is not specific to any particular type of event. It is aimed at those events where there may be a risk of a terrorist attack either because of the nature of the event or the number or nature of the people who host or attend it. It highlights the vital part you can play in the UK counter terrorism strategy.

Terrorist attacks in the UK are a real and serious danger. The terrorist incidents in the Haymarket, London and at Glasgow Airport in June 2007 indicate that terrorist continue to target crowded places; largely because they are usually locations we limited protective security measures and therefore afford the potential for most fatalities and casualties. Furthermore, these two particular incidents identify that terrorists are prepared to use vehicles as a method of delivery and will attack of well away from London.

Terrorism can come in many forms, not just a physical attack on life and the can include interference with vital information or communication systems, can inguirruption and economic damage. Some attacks are easier to carry out if the terror at is a usted by an 'insider' or by someone with specialist knowledge or access. For a mass includes threats or hoaxes designed to frighten and intimidate. These have and regeted at various events in the UK in the past.

It is possible that your event could be the target of a term incident. This might include having to deal with a bomb threat or with a poet was left in or around the event area.

In the worst case scenario your soft a promers could be killed or injured, and your premises destroyed or change in a 'no warning', multiple and coordinated terrorist attack.

Of course there is a need ma. org fised events as accessible as possible and to ensure re which event arenas. This guide is accordingly not intended there is a welcoming atmo to create a 'fortros ality'. ere is however a balance to be achieved. Those responsible hat there are robust protective security measures available to for security a oforme mitigate against e threat of terrorism, e.g. protection from flying glass and vehicle access controls areas, goods and service yards and underground car parks. to crowe

At some organised events there will be an expectation from the general public that security one will be in place. Equally, an organised event may take place at a location or in planes, one ere access control and elevated security are an unexpected and unusual (and the y unwelcome) feature. This does not negate your responsibility to ensure appropriate security measures are in place.

#### Law, Liability and Insurance

There are legal and commercial reasons why your event security plan should deter such acts, or at least minimise their impact. They are:

**Criminal prosecution and heavy penalties** under health and safety laws for companies and individuals who manage or are responsible for events are a real possibility in the wake of a terrorist incident, particularly if it emerges that core standards and statutory duties have not been met. Particularly relevant to protective security at events are the specific requirements of the Health and Safety at Work Act 1974 and Regulations made under it to do all of the following:

- carry out adequate **risk assessments** and put suitable measures in place to manage identified risks, even where they are not of your making and are outside your direct control: then be alert to the need to conduct prompt and regular reviews of those assessments and measures in light of new threats and developments
- co-operate and co-ordinate safety arrangements between owners, manager, security, staff, tenants and others involved on site, including the sharing of incident value and working together in testing, auditing and improving planning and tappens. The commercial tensions which naturally arise between landlords and the ants, between event organisers and contractors and between any hyperter organisations, who may well be in direct competition with ach other, must be left aside entirely when planning protective security
- ensure adequate training, information and equipment are provided to all staff, and especially to those involved directly on the safe theory ity side
- put proper procedures and competent staff holds to deal with **imminent and serious danger** and evacuation.

The need to focus on proper preparation and expension to guard against criminal prosecution for safety and security lapses has succeed with the introduction of legislation which gives the courts power to send individual directors and others to jail for up to 2 years for a breach of health and safety office. Provous legislation provided only for a fine. See Corporate Manslaur der Al 2008 of Corporate Homicide Act 2007

The Regulatory is one ment and Sanctions Act 2008 gives regulators such as the HSE the power to issue what are neffect heavy "fixed penalty" fines to businesses and event organiser with a need of to take a prosecution through the courts.

**Insul** the again the full cost of damage to your own commercial buildings from terrorist octs is a poming harder to find in some sectors at an affordable premium. Adequate cover loss of a venue and business interruption during a rebuild or decontamination is expensive even where available from the limited pool of specialist underwriters. Full protection against compensation claims for death and injury to staff and customers caused by terrorism is hievable, albeit at a cost.

With individual awards for death and serious injury commonly exceeding the publicly funded criminal injuries compensation scheme upper limit, there is every incentive for victims to seek to make up any shortfall through direct legal action against owners, operators, managers and tenants under occupiers liability laws. Having to pay large and numerous compensation claims out of your own uninsured pocket could set your business back several years.

#### **Emergency and business continuity planning**

A business continuity strategy is essential in ensuring that your event can simultaneously respond to an incident and return to **'business as usual'** as soon as possible. You should develop an emergency response plan, which can be implemented to cover a wide range of possible situations. For example, part of the plan will cover evacuation procedures, but the principles will be generally applicable for fire, flooding, or bomb threat incidents. This is particularly important for smaller operations that may not have the resources to withstand even a few days of financial loss.

### The British Standards Institution (BSI) BS25999 (Business Continuity Management Standard has now been superceeded by ISO 22301. See www.bsigroup.com

**Reputation and goodwill** are valuable, but prone to serious and permanent de nag turns out that you gave a less than robust, responsible and professional priority to be protecting people against attack. Being security minded and better prepared reassures customers and staff that you are taking security issues seriously.

Do you know who your neighbours are and the nature of their business of the incident at their premises affect your operation? There is limited value in the feature bing your own event in isolation. Take into account your neighbours' business plan and mose with emergency services.

A number of organisations have adopted good practice to the ce the protective security measures in and around their events. This document then the stand complements such good practice measures.

This guide recognises that organised events offer in tany ways including size, location, layout and operation and that some other disc included in this document may already have been introduced at some locations.

For specific advice relating to your particular event, contact the nationwide network of specialist police advisers mown Counter Terrorism Security Advisors (CTSAs) through your local point force They are coordinated by the National Counter Terrorism Securit Office (CTSO). Your CTSA will also be able to direct you to a suitable Police fecture Co-ordinator (SecCo) if one is to be appointed to your major event, who we give a vice on event security.

It is essential that with e work you undertake on protective security is undertaken in partnership with the police, other authorities such as the highway manager, open space manager or local owner as appropriate and your neighbours, if your premises are to be

the worth remembering that measures you may consider for countering terrorism will also here a ainst other threats, such as theft and criminal damage. Any extra measures that are considered should integrate wherever possible with existing security.

### two managing the risks

Managing the risk of terrorism is only one part of an event manager's responsibility when preparing contingency plans in response to any incident in or near their event which might prejudice public safety or disrupt normal operations.

The Events Safe Guide (purple guide) and the Guide to Safety at Sports Grounds (green guide) are the main reference documents covering the management of event venues. An event organiser also has a responsibility under Health and Safety Regulations and the Regulatory Reform (Fire Safety) Order 2005 or in Scotland the Fire (Scotland) Act 2005 and Fire Safety (Scotland) Regulations 2006. In regard to running events in sports grounds management must also be aware of their responsibilities under Health and Safety at Sports Ground Act 2005 and Regulations and under the Safety Certificate issued under the Safety at Sports Ground Act 2075 and/or the Fire Safety and Safety of Places of Sport Act 1987.

With regard to protective security, the best way to manage the hazards a brisks to your event is to start by understanding and identifying the threats to it, and its variability to those threats.

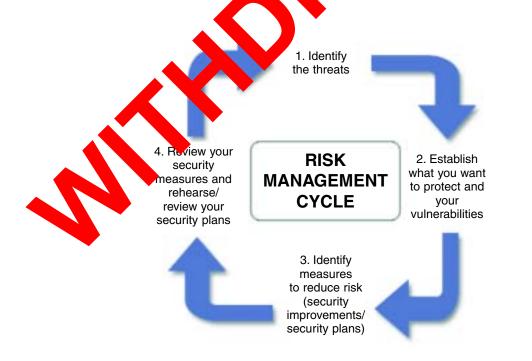

This will help you to decide:

- what security improvements you need to make
- what type of security and contingency plans you to level

For some organised events, simple good practice coupled with gilance and well exercised contingency arrangements - may be all that is new eq.

If, however, you assess that you are vulnered to a teck, you should apply appropriate protective security measures to reduce the rise to as we as reasonably practicable.

The following diagram illustrates a typic, sk management cycle:

#### Step One: Identify the threats.

Understanding the terrorists intentions and capabilities - what they might do and how they might do it - is crucial to assessing threat. Ask yourself the following questions:

- What can be learnt from the government and media about the current security climate, or about recent terrorist activities? Visit www.mi5.gov.uk or refer to the Useful Contects section at the back of this booklet.
- Is there anything about the location of your event, its visitors, sponsors, convactors, occupiers and staff, or your activities that would particularly attract a terror of tack?
- Is there an association with high profile individuals or organisations the might terrorist targets?
- Do you have procedures in place and available for deployment of pock of when VIPs attend your event?
- Could collateral damage occur from an attack on, or other incidents a high risk neighbour?
- What can your local Police Service tell you about the problems in the area of the event?
- Is there any aspect of your business or the second at terrorists might wish to exploit to aid their work, e.g. plans, technics were or cauthorised access?
- Do you communicate information about the hreat and response levels to your staff?

### Step Two: Decide what you have d to protect and identify your vulnerabilities.

Your priorities for providing carded for under the following categories:

- People (staff condex concessionaires, contractors, general public affected by the presence of the event)
- Phyce lass (buildings, contents, equipment, plans and sensitive materials)
- Informed (electronic and paper data)
- Processes (supply chains, critical procedures) the actual operational process and essential services required to support it.

You you what is important to you and your event. You should already have plans in place for dealing with fire and crime, procedures for assessing the integrity of those you employ or ovide contracting, protection from IT viruses and hackers, and measures to secure parts of the event location.

Does your pre-event planning or post event review lead you to think you are at greater risk of attack - perhaps because of the nature of your event or location of your event. If so, then consider what others could find out about your vulnerabilities, such as:

- Information about you that is publicly available, e.g. on the internet or in public documents
- Anything that identifies installations or services vital to the continuation of your business/event
- Any prestige targets that may be attractive to terrorists, regardless of whether their loss would result in business collapse or event cancellation

You should have measures in place to limit access into service or back of house parts of the event and vehicle access control measures into goods and service area.

As with Step One, consider whether there is an aspect of your event or activities that terrorists might want to exploit to aid or finance their work. If there are, how stringent are your checks on the people you recruit or on your contract personnel? Are your staff security conscious?

It is important that your staff can identify and know how to report suspicious activity. (See hostile reconnaissance on page 57).

#### Step Three: Identify measures to reduce risk

An integrated approach to security is essential. This involves thinking about physical sec information security and personnel security (i.e. good recruitment and employment of There is little point investing in costly security measures if they can be easily under mining disaffected member of staff or by a lax recruitment process.

Remember, **TERRORISM IS A CRIME.** Many of the security precautions typically used of deter criminals are also effective against terrorists. So before you including aquitional security measures, review what you already have in place. You may already have a good security regime on which you can build.

If you need additional security measures, then make them not considered by careful planning wherever possible. If you are using an area on possible, normally used for another purpose, work with the occupiers to produce an integrated source package. Even if organisations / businesses surrounding your even possible, are not concerned about terrorist attacks, they will be concerned about general crime and your security measures will help protect against crime as well as terrorist

Staff may be unaware of existing sector of case. For may have developed habits to circumvent them, e.g. short cut of them exits. Simply reinstating good basic security practices and regularly reviewing them will burn benefits at negligible cost.

### Step Four: Review your security measures and rehearse and review security are non-ingency plans.

You should use our prevent panning or post event review to exercise your plans to ensure that they represent accurate workable and up to date and draw on lessons learnt from previous events. You should be aware of the need to develop bespoke plans for each location and event you manage.

shear of sand exercises should, wherever possible, be conducted in conjunction with all a mergency services and local authorities.

Sure that your staff understand and accept the need for security measures and that security is seen as part of everyone's responsibility, not merely something for security experts or professionals. Make it easy for people to raise concerns or report observations.

### IT SHOULD BE REMEMBERED THAT THE GREATEST VULNERABILITY TO ANY EVENT IS COMPLACENCY.

See Good Practice Checklist - Business Continuity Planning in Appendix A.

### three security planning

It is recognised that for many larger organised events responsibility for the implementation of protective security measures following a vulnerability and risk assessment by a Counter Terrorism Security Advisor (CTSA) will fall on a Security Manager within the organisation team, who must have sufficient authority to direct the action taken in response to a security threat. It is acknowledged that with different events this role may be performed by more than one person and could be referred to in different job titles.

The Security Manager must be involved in the planning of the event's perimeter security, access control, contingency plans etc, so that the terrorist dimension is taken into account. The Security Manager must similarly be consulted over any temporary construction for the event and/or liaise with security personnel for any building used for the event social pount terrorism recommendations, e.g. concerning glazing and physical barriers can be account in, taking into account any planning and safety regulations covered in the purple or gree prove as well as any appropriate Fire Safety Regulations.

### The Security Manager at most organised events should alread the ponsibility for most if not all of the following key areas:

- The production of the security plan based on the risk
- The formulation and maintenance of a search pla
- The formulation and maintenance of other contingency the sealing with bomb threats, suspect packages, protected spaces the equation/invacuations
- Liaising with the police, other emergency service and local authorities
- Arranging staff training, including als/he own oputies and conducting briefings/debriefings

pla

• Conducting regular review on .

For independent and impartial punter provism advice and guidance that is site specific, the Security Manager should prablish operact with the local police Counter Terrorism Security Advisor (CTSA). Mart UK Provises have at least two CTSAs.

#### Your CTSA ca

- Help u a ss the threat, both generally and specifically
  - by twice on physical security equipment and its particular application to the methods d by provists; The CTSA will be able to comment on its effectiveness as a deterrent, ptection and as an aid to post-incident investigation
  - ache de contact with emergency services and local authority planners to develop propriate response and contingency plans
- Identify appropriate trade bodies for the supply and installation of security equipment
- Offer advice on search plans
- Assist you in contacting a Police Security Co-ordinator (SecCo see page 59) for advice if appropriate

#### **Creating your Security Plan**

The Security Manager should aim to produce a plan that has been fully exercised, and which is regularly audited to ensure that it is still current and workable. Singular events should still test any bespoke plans developed, to ensure they are workable and fit for purpose.

Before you invest in additional security measures, review what is already in place, including known weaknesses such as blind spots in any CCTV system.

When creating your security plan, consider the following:

- Details of all the protective security measures to be implemented, covering, information and personnel security
- Instructions on briefing content to security staff including type of be avious to look for and methods of reporting
- Instructions on how to respond to a threat (e.g. telephone bomb reat
- Instructions on how to respond to the discovery of Auspicious it or event
- A search plan
- Evacuation and invacuation plans and detail on souring the attraction in the event of a major incident
- Your business continuity plan
- A communications and media strategy includes handling enquiries from concerned family and friend

Security Managers should also be fairly when the advice contained in the 'Fire Safety Risk Assessment - 'Small and Markey Place of Assembly' and 'Large Places of Assembly' guidance documents. These are available to download at www.gov.uk

### Your planning and its reporate the seven key instructions applicable to most incidents:

- 1. Do no ouch spi ous items
- 2. Dive the away to a safe distance
- 3. Prevent others from approaching
- Communicate safely to staff, business visitors and the public
- 5. **De** hand-held radios or mobile phones away from the immediate vicinity of a suspect item, remaining out of line of sight and behind hard cover
- 6. Notify the police
- 7. Ensure that whoever found the item or witnessed the incident remains on hand to brief the police.

Effective security plans are simple, clear and flexible, but must be compatible with any existing plans for premises/locations used for events, e.g. evacuation plans and fire safety strategies. Everyone must be clear about what they need to do in a particular incident. Once made, your plans must be followed.

### four physical security

Physical security is important in protecting against a range of threats and addressing vulnerability.

Put in place security measures to remove or reduce your vulnerabilities to as low as reasonably practicable bearing in mind the need to consider safety as a priority at all times. Security measures must not compromise public safety.

Your risk assessment will determine which measures you should adopt, but they range from basic good housekeeping (keeping communal areas clean and tidy) through CCTV, period fencing, intruder alarms, computer security and lighting, to specialist solutions such as perimeter detection systems equipment.

Specialist solutions, in particular, should be based on a thorough assessment - n lea because you might otherwise invest in equipment which is ineffective, unnecessary ar expensive.

#### Successful security measures require:

- The support of senior management
- Staff awareness of the measures and their responsibility many set of the measures and the set of the measures and the measures and the set of the set of the measures and the set of the measures and the set of the s
- A senior, identified person within your organisation have a sibility for security.

g th

n work

#### Action you should consider

Contact your Counter Terrorism Security Advisor (USA), using your local police force at the start of the process. As well as advising you on physical ecurity, they can direct you to professional bodies that regulate and our seep putate suppliers.

Local Police Security Co-ordinators (Security advice to large events, liaising with CTSAs for the security advice to physical security measures.

Remember, you will need to source than all necessary regulations are met, such as Local Authority permissions, he than safer and fire prevention requirements.

Plan carefully - as the cancer keep costs down. Whilst it is important not to delay the introduction of the cess of equipment or procedures, costs may be reduced if the premises or location your chusing all by has the necessary security which can be easily integrated within your own on.

#### Sect ity wareness

ion according to the second se

They must have the confidence to report any suspicions, knowing that reports - including false alarms - will be taken seriously and regarded as a contribution to the safe running of the event.

Training is therefore particularly important. Staff should be briefed to look out for packages, bags or other items in odd places, carefully placed (rather than dropped) items in rubbish bins and unusual interest shown by strangers in less accessible places. See hostile reconnaissance on page 57.

#### **Access control**

Keep access points to a minimum and make sure the boundary between public and private areas of your operation is secure and clearly signed. Ensure there are appropriately trained and briefed security personnel to manage access control points or alternatively invest in good quality access control systems, especially in VIP or restricted access areas. See High Profile Events on page 61.

#### **Security passes**

If a staff pass system is in place, insist that staff wear their passes at all times an the issuing is strictly controlled and regularly reviewed. Visitors to private or reicted area should be escorted and should wear clearly marked temporary passes, w st be ich returned on leaving. Anyone not displaying security passes in private or r icteo reas should either be challenged or reported immediately to security ma asses aen should include a photograph of the bearer, and returned against signa re

#### **Screening and Patrolling**

The screening of hand baggage is a significant determination by be a suitable protective security consideration for your event.

Routine searching and patrolling of premiser presents an oher level of vigilance; covering both internal and external areas. Keep patrol regulation predictable (i.e. every hour on the hour). See Search Planning 2012, 29.

#### Traffic and parking con

If you believe you might be at risk Venicle bomb, the basic principle is to keep all ring essential access should be identified in advance vehicles at a safe distang e rec und though. If possible, you should ensure that you have and checked before b g al I landscaping, traffic-calming measures and robust, well-lit proper access control, ca barriers or boll lly, i p non-essential vehicles at the maximum possible distance, at from yo least 30 met event.

For site specific accessed guidance you should contact your CTSA or SecCo. See also Vehicle Bort and provised Explosive Devices on page 49.

#### oors nd windows

d quality doors and windows on permanent structures are essential to ensure building secure advice on the appropriate standards can be obtained from your local police force.

f using a temporary building structure as a location for an event a survey of the existing doors, windows and build materials could be made to identify any gaps in mitigating your own event security vulnerabilities. External doors should be strong, well lit and fitted with good quality locks where possible. Due to the temporary nature of these structures capable guardians or other appropriate security measures may provide a more suitable solution.

Doors that are not often used should be internally secured ensuring compliance with relevant fire safety regulations and their security monitored with an alarm system. This is particularly important where an external search / screening operation is present in order to prevent unauthorised entry and bypassing any search regime.

As a minimum accessible windows should be secured with good quality key operated locks. The police may provide further advice on temporarily improving the security of glazed doors and accessible windows.

- Many casualties in urban terrorist attacks are caused by flying glass, especially in modern buildings and glazing protection is an important casualty reduction measure.
- Extensive research has been carried out on the effects of blast on glass. There are technologies that minimise shattering and casualties, as well as the costs of reoccupation.
- Anti-shatter film, which holds fragmented pieces of glass together, offers a relatively cheap and rapid improvement to existing glazing. If you are installing new windows, consider laminated glass, but before undertaking any improvements seek specialist advice through your police CTSA or visit www.cpni.gov.uk

#### Perimeter

The style and quality of perimeter security will depend on the risks and vulnerabilities identified in your security assessment. If any searching of persons or vehicles has ake then a robust perimeter must be maintained in order to have full confidence in the se regime applied. Where possible use existing structures to contain an even ea.

blac

Temporary fencing will require supporting processes such as patro e and alarms to ensure reduction in risk. Equally, any temporary fencing านรัง here to health & otion remembering safety safety legislation, purple and green guide advice and fire re must always have priority over security.

#### Integrated security systems

Intruder alarms, CCTV and lighting are commonly been deter crime, detect on children and the so that they work together in an deter crime, detect offenders and effective and coordinated manner.

.ntrusion detection technology can pla role in an integrated security system; it is If police response to any alarm is required, your as much a deterrent as a means teci the As. system must be compliant wi iation of Chief Police Officers' (ACPO) security systems policy. See www.secu. bydesi .com and www.acpo.police.uk For further information, contact the A ration Office at your local police headquarters. ms A

ther a security alert is real and is often vital in post-incident Using CCTV can here the images are good enough to identify what happened and be investigations at only used in cou

ting produces an obvious means of deterrence as well as detection, but take into External poact of additional lighting on your neighbours. If it is carefully designed and accou the hting will help security staff and improve the capabilities of CCTV systems. rnal .

that CCTV is only effective if it is properly monitored, maintained and can le an active response.

See CCTV guidance on page 23.

### five good housekeeping

Good housekeeping improves the ambience of your event and reduces the opportunity for placing suspicious items or bags and helps to deal with false alarms and hoaxes.

You can reduce the number of places where devices may be left by considering the following points:

• Avoid the use of litter bins are not critical/vulnerable areas of the even i.e. do not place litter bins next to or mar

glazing, support structures, most sensitive or critical areas (but if you do posure that the additional and prompt cleaning in these areas).

- Alternatively review the management of all your litter bins and ton, terms of their openings, their blast mitigation capabilities and location.
- The use of clear bags for waste disposal is a further alternet was provides an easier opportunity for staff to conduct an initial examination is subjicious, items.
- Review the use and security of compactors, when the bins and security bins and security of compactors, when the bins and security bins a
- Keep public and communal areas exitence rance queues, lavatories clean and tidy, as well as service corridors and areas.
- Keep the fixtures and fittings in such a s to a minimum ensuring that there is little opportunity to hide devices
- Temporary information stand, concert onaires and kiosks should be searched before and after use and secured on press that unattended.
- Lock unoccupied for room and store cupboards.
- Ensure that erything c a place and that things are returned to that place.
- Place the plastic seals on maintenance hatches.
- Kee external areas as clean and tidy as possible.

even sites should have in place an agreed procedure for the management of the sites should have in place an agreed procedure for the management of the sites of the second ach vehicle and its occupants, should be known to the event security or management in ince.

 If allowed, pruning vegetation and trees, especially near entrances, will assist in surveillance and prevent concealment of any packages.

#### Additionally consider the following points:

Ensure that all staff are trained in bomb threat handling procedures or at least have ready access to instructions - and know where these are kept. (See bomb threat checklist)

If your event has a CCTV, review your system to ensure it has sufficient coverage both internally and externally.

Management should ensure that Fire Extinguishers are appropriately marked and authorised for the locations they will be kept. Regular checks should be made that they have not been interfered with or replaced.

Event management should identify a secondary secure location for a centrol for m (if they have one) as part of their normal contingency plans.

All event systems should have an uninterrupted power supply (**S**) a pilable which is regularly tested if it is identified that power loss would impact on the part of the public.

'B'.

nsure

See good practice checklist - Good Housekeeping in Appen

### six access control

### Any lack of vigilance around pedestrian and vehicle entrances to your event and queues forming outside your main event area affords anonymity to a potential terrorist.

Security staff deployed externally should adopt a 'see and be seen' approach and where possible police any queuing outside the event. The queue should be orderly, monitored by CCTV operators if available and communication between visitors and staff established.

This is especially important if large numbers of persons are expected to queue to enter an event. Consider staging the queuing process to ensure security staff are given the opport to scrutinise every visitor as they enter the event site. Staff must be briefed on what to ok for and how to deal with it.

There should be clear demarcation between public and private areas, with appropriate access control measures into and out of the private side. This relates to private areas within the event, not public entrances.

#### **Risk assessment**

Refer to 'managing the risks' on page 9 and decide the level of sourity ou require before planning your access control system. Take into account any sourial vatures you may require.

#### Appearance

The access control system to your private or restricted areas, based house corridors and service yards is often the first impression of security may non persons attending your event.

#### Ease of access

Examine the layout of your system. Every the transmustering and exit procedures allow legitimate users to pass without undue every and delay.

Ideally, adopt a photo ID care access on trol vistem which varies in appearance for the different levels of access across the site fecurity staff should be instructed what to examine when checking passes and his site for equality assured through testing.

#### Training

Ensure your access control system. Your installer should be vide adequate system training.

#### System aintenance

ins lier sould supply all relevant system documentation, e.g. log books and service re you aware of the actions required on system breakdown? Do you have a actory system maintenance agreement in place? Is there a contingency plan you can ent at a moments notice?

#### Interaction

Your access control system should support other security measures. Consider system Compatibility between access control, alarms, CCTV and text alert systems.

#### Compliance

Your access control system should be compliant with:

- The Equality Act 2010 -
- The Data Protection Act 1998
- The Human Rights Act 1998
- Regulatory Reform (Fire Safety) Order 2005
- Health and Safety Acts
- The Fire (Scotland) Act 2005
- Events Safe Guide (purple guide)
- Guide to Safety at Sports Grounds (green guide)

Access control is only one important element of your overall section system.

#### REMEMBER

Whether driving a lorry or carrying explositions, a provide the physical access in order to reach the intended target.

trol

See Good Practice Checklist - Access C

d VIS. s in Appendix 'C'

### seven cctv guidance

CCTV can help clarify whether a security alert is real and is often vital in any post incident investigation.

You may be able to set up your own CCTV system, bespoke to the event, or where possible use a permanent system in the building or area you are using if suitable.

If you have access to a CCTV system you should constantly monitor the images captured or regularly check recordings for suspicious activity ensuring at the times full compliance with the Data Protection 11 to 5 which should be specified in your CCTV Date Protection Policy.

If you contract in CCTV operators they must be licensed by the Security in ustry Authority if the CCTV equipment is deployed into fixed positions or has a pan, tilt and 2 m capability and where operators:

- Cover all the entrances and exits to your event and other are that critical to the safe management and security of your operation.
- Proactively monitor the activities of members of the the whether they are in public areas or on private property.
- Use cameras to focus on the activities of particular as the either by controlling or directing cameras to an individual's section.
- Use cameras to look out for part lar lindu
- Use recorded CCTV image lenth individuals or to investigate their activities.

Since 20 March 2006, contract CTV operators must carry an SIA CCTV (Public Space Surveillance) license - it is Negative work without one. Your security contractor should be aware of this and you should ensure that the licensed staff are supplied. Further guidance can be found at www.sia.htereact.e.g. uk

With more organ ations moving towards digital CCTV systems, you should liaise with your local poly to establish that your system software is compatible with theirs to allow retrieval and up of the rimages for evidential purposes.

#### rself the following questions:

's your CCTV system currently achieving what you require it to do? Do you need it to nfirm alarms, detect intruders through doors or corridors and produce images of evidential quality?

- Are the CCTV cameras in use for the protective security of your event integrated with those used to monitor crowd or visitor movement?
- Would the introduction of an Automatic Number Plate Reader (ANPR) system complement your security operation?

The Centre for Applied Science and Technology (CAST) formerly known as The Home Office Scientific Development Branch (HOSDB), has published many useful documents relating to CCTV, including 'CCTV Operational Requirements Manual' (Ref: 28/09), 'UK Police Requirements for Digital CCTV Systems' (Ref: 09/05), and 'Performance Testing of CCTV Systems' (Ref: 14/95).

#### Consider also the following points:

- Ensure the date and time stamps of the system are accurate.
- Regularly check the quality of recordings.
- Digital CCTV images should be stored in accordance with the evidential needs of Police. Refer to HOSBD publication 09/05.
- Ensure that appropriate lighting complements the system during layers and darkness hours.
- keep any recorded images for at least 31 days
- Use good quality media and check it regularly by checknet that backups are operating correctly.
- Ensure the images recorded are clear that propleted vehicles are clearly identifiable.
- Ensure the images recorded are clear the and vehicles are clearly identifiable.
- Check that the images captured are the ight area.
- Implement standard operation sedures, odes of practice and audit trails.
- Give consideration to the number of camera images a single CCTV operator can effectively monitor from one to e.
- Do you have sufficient to staff to continue to monitor your CCTV system during an incident suate or search?

See Good Pressee Cheerist - CCTV in Appendix 'D'

#### **CV** la lenance

CCTV to intenance must be planned and organised in advance and not carried out on an hoc basis. If regular maintenance is not carried out, the system may eventually fail to me its operational Requirement (OR).

#### What occurs if a system is not maintained?

- The system gets **DIRTY** causing poor usability
- CONSUMABLES wear causing poor performance
- Major parts FAIL
- WEATHER damage can cause incorrect coverage
- DELIBERATE damage/environmental changes can go undetected

# eight small deliveries by courier and mail handling

Events often necessitate receiving a wide variety of deliveries. If using premises for an event there may be mail and other deliveries as part of the normal occupiers business within those premises. This offers an attractive route into premises for terrorists.

Each event should consider the need for a screening process at their mail handling site, whether at a temporary or permanent structure and consider the following

or

#### **Delivered Items**

Delivered items, which include letters, parcels, packages and anything delivered items po courier, has been a commonly used terrorist device. A properly conducted risk assessn should give you a good idea of the likely threat to your organisation/even and indicat precautions you need to take. See www.cpni.gov.uk

Delivered items may be explosive or incendiary (the two most like v k, 13), or comical, biological or radiological. Anyone receiving a suspicious delivery is malike to know which type it is, so procedures should cater for every eventuality.

Delivered items come in a variety of shapes and sizes; a **W** in de one will look innocuous but there may be telltale signs.

#### Indicators to Suspicious Deliverie

- It is unexpected or of unusual origin or the main familiar sender.
- There is no return address or the concess cannot be verified.
- It is poorly or inaccurate addressed expincorrect title, spelt wrongly, title but no name, or addressed to a individu no longer with the company.
- The address has been vinted wenly or in an unusual way.
- The writing is here afan or unusual style.
- There <u>a nusual pattmarks</u> or postage paid marks.
- A why bag, whill in padded envelope, has been used.

eas not st effective letter bombs weigh 50-100g and are 5mm or more thick.

rked 'personal' or 'confidential'.

is oddly shaped or lopsided.

- The envelope flap is stuck down completely (a harmless letter usually has an ungummed gap of 3-5mm at the corners).
- There is n Aunusual smell
- There is an additional inner envelope, and it is tightly taped or tied (however, in some organisations sensitive or 'restricted' material is sent in double envelopes as standard procedure).

### Chemical, biological or radiological materials in the post

Terrorists may seek to send chemical, biological or radiological (CBR) materials in the post. It is difficult to provide a full list of possible CBR indicators because of the diverse nature of the materials. However, some of the more common and obvious are:

- Unexpected granular, crystalline or finely powdered material (of any colour and usual with the consistency of coffee, sugar or baking powder), loose or in a context.
- Unexpected sticky substances, sprays or vapours.
- Unexpected pieces of metal or plastic, such as discs, rods, small shorts on heres.
- Strange smells, e.g. garlic, fish, fruit, mothballs, pepper. If you do not go on sniffing it. However, some CBR materials are odourless and tas less.
- Stains or dampness on the packaging.
- Sudden onset of illness or irritation of skin, eyes or nos

CBR devices containing finely ground powder or puice by be negative without being opened.

#### What you can do:

- The precise nature of the incident (chem. poiological or radiological) may not be readily apparent. Keep your proceeding general and wait for expert help from the emergency services.
- Review plans for rejecting stational visitors in the event of a terrorist threat or attack. Remember that every second provide the best solution. You will need to be guided by the emergence second on the day.
- Plan for the shutdown of systems that may contribute to the movement of airborne hazer's (e., complete equipment containing fans and air-conditioning units).
  - Ensure t dows can be closed quickly if required.
  - It were external windows are not permanently sealed shut, develop plans for closing them, presponse to a warning or incident.

camine the feasibility of emergency shutdown of air-handling systems and ensure that any such plans are well rehearsed.

- Where a hazard can be isolated by leaving the immediate area, do so as quickly as possible, closing doors and windows as you go.
- Move those directly affected by an incident to a safe location as close as possible to the scene of the incident, so as to minimise spread of contamination.
- Separate those directly affected by an incident from those not involved so as to minimise the risk of inadvertent cross-contamination.
- Ask people to remain in situ though you cannot contain them against their will.

You do not need to make any special arrangements beyond normal first aid provision. The emergency services will take responsibility for treatment of casualties.

#### Planning your mail handling procedures

Although any suspect item should be taken seriously, remember that most will be false alarms, and a few may be hoaxes. Try to ensure that your procedures, while effective, are not needlessly disruptive. Take the following into account in your planning:

- Seek advice from your local police Counter Terrorism Security Advisor (CTSA) on the threat and on defensive measures.
- Consider processing all incoming mail and deliveries at one point only. This should ideally be off-site or in a separate building, or at least in an area that can easily be isolated and in which deliveries can be handled without taking them through other parts of the event or site.
- Ensure that all staff who handle mail are briefed and trained. Include reception encourage regular correspondents to put their return address on each item
- Ensure that all sources of incoming mail (e.g. Royal Mail, couriers, and hand delight and included in your screening process.
- Ideally post rooms should have independent air conditioning structure beings, as well as scanners and x-ray machines. However, while mail scanners must detect devices for spreading chemical, biological, and radiological (CBR), there is (e.g., plosive devices), they will not detect the materials themselves.
- At present, there are no CBR detectors capable of the transformed all hazards reliably.
- Post rooms should also have their own was the shower facilities, including soap and detergent.
- Staff need to be aware of the usu liveries and to be briefed of unusual Dat rn of openers (and with minimum occurrences. Train them to open st noses and mouths and always to wash their movement), to keep hands away from hands afterwards. Staff blochto envelopes or shake them. Packages Juld suspected of containing hemical or radiological material should ideally be ological placed in a double led L
- Consider whether stand dling post need protective equipment such as latex gloves and facentaks (see advice from a qualified health and safety expert). Keep overalls and footward galable in use they need to remove contaminated clothing.
- Man certain that opening areas can be promptly evacuated. Rehearse evacuation pocenties and routes, which should include washing facilities in which contaminated static courties isolated and treated.
  - ho are responsible for mail handling should be made aware of the importance of solation in reducing contamination.
- repare signs for display to staff in the event of a suspected or actual attack.

For more guidance on mail handling procedures see www.cpni.gov.uk

### nine search planning

Searches of the event area should be conducted as part of your daily good housekeeping routine. They should also be conducted in response to a specific threat and when there is a heightened response level.

As previously mentioned under Security Planning, it is recognised that for the majority of events responsibility for the implementation of any search planning, following a vulnerability and risk assessment, will fall upon the Security Manager. Where an event is held in a building, check with the owners/occupiers if a search plan is in existence and who would have responsibility for its implementation.

The following advice is generic for most events, but recognises that they are built operate differently. If considered necessary, advice and guidance on searching solution available through your local Police Security Co-ordinator (SecCo) if appointed, CTSA o Search Advisor (PoISA).

#### **Search Plans**

- Search plans should be prepared in advance and staff should be trined in them.
- The conduct of searches will depend on local circums and local knowledge, but the overall objective is to make sure that the entire area including grounds, are searched in a systematic and thorough manner so the property part is left unchecked.
- If you decide to evacuate your event in respect, the an incident or threat, you will also need to search it in order to ensure it is safe to react pancy.
- The police will not normally searche very. (See high Profile Events page 61). They are not familiar with the layout and all processories of what should be there and what is out of place. They cannot, therefore rearch as quickly or as thoroughly as a member of staff or on site security re-sonned.
- The member(s) of stoff ne cinated b carry out the search do not need to have expertise in explosives or other cases a cinace. But they must be familiar with the place they are searching. The are how for any items that should not be there, that cannot be accounted or an event that are out of place.
- Idealk see hers showd search in pairs; to ensure searching is systematic and thorough.

#### Action fou Should Take

division your event area into sectors. If the site is organised into areas and sections, d be identified as separate search sectors. Each sector must be of manageable

The torised search plan should have a written checklist - signed when completed - for the information of the event Security Manager.

Remember to include any stairs, fire escapes, corridors, toilets and lifts in the search plan, as well as car parks, service yards and other areas outside. If evacuation is considered or implemented, then a search of the assembly areas, the routes to them and the surrounding area should also be made prior to evacuation.

Consider the most effective method of initiating the search. You could:

- Send a message to the search teams over a public address system (the messages should be coded to avoid unnecessary disruption and alarm)
- Use personal radios or pagers.

Your planning should incorporate the seven key instructions applicable to most incidents:

- 1. Do not touch suspicious items.
- 2. Move everyone away to a safe distance.
- 3. Prevent others from approaching.
- 4. Communicate safely to staff, visitors and the public.
- 5. Use hand-held radios or mobile phones away from the mineriate wity of a suspect item, remaining out of line of sight and behind hard by the
- 6. Notify the police.
- 7. Ensure that whoever found the item or with read in incident remains on hand to brief the police.

Exercise your search plan before the event. The part are need to get a feel for the logical progression through their designated are and the search of time this will take. They also need to be able to search without unduly are sequence any visitors.

#### Searching of persons elevent your event

The security of your event crises on using some control over persons entering it. The security will differ on event days and in n even days. As an event day approaches you may feel the need to increase the legislation of the at your venue.

The best practice as a provide a search and clear the area as previously described. This will give you concerne the your event is clear and fit for purpose. Having spent that time and effort searching our structum the security could be compromised if you fail to take adequate steps to search person entering the venue.

When the venue earch is complete all persons entering the event should go through a earch require. Dependent on the threat this search could be restricted to random bag surches or at times of a high security risk extend up to full body searches of every person entering the venue.

#### Consider the following.

- Ensure that event regulations include a right to refuse entry unless searched.
- Ensure that temporary staff have a clause within their contracts allowing them to be searched.
- Consider advising visitors that searches will be carried out. They should arrive early and be encouraged not to bring bags. This can be achieved by marking tickets, use of your website or pre-event advertising.
- Ensure you have properly briefed the searching staff on their powers and what they are searching for.
- Ensure the search areas have sufficient space.

- Consider separating queues into those with bags and those who can be fast tracked through the search area.
- Ensure you have sufficient staff to carry out the searches.
- Search queues allow the profiling of visitors by security staff. This allows an opportunity to identify possible hostile reconnaissance.
- Consider the fact that visitors often arrive in large groups, close to the event start time. This can impact on the ability of the searchers to achieve their aims.
- Experience shows that when there is a real threat from terrorism, most visitors not only accept searching, they actually expect to be searched. It instils confidence that an every safe environment and an enjoyable experience.

Discuss your search plan with your SecCo if appointed, CTSA or PolSA.

See good practice checklist - Searching in Appendix 'D'

For more guidance on mail handling procedures see www.cpni.gov.uk

### ten evacuation planning

As with search planning, evacuation should be part of your security plan. You might need to evacuate your event because of:

- A threat received directly to the owners of the land/premises, highways manager or open space manager of the event site.
- A threat received directly to the event organiser.
- A threat received elsewhere and passed on to you by the police.
- Discovery of a suspicious item in the event (perhaps a postal package, an uncome hold-all or rucksack).
- Discovery of a suspicious item or vehicle outside the event area or keildi
- An incident to which the police have alerted you.

Whatever the circumstances, you should tell the police as soon as possible that action you are taking.

The biggest dilemma facing anyone responsible for an evacuation bank pow to judge where the safest place might be. For example, if an evacuation route the people past a suspect device outside your building, or through an area believed to a concerninated, external evacuation may not be the best course of action.

#### A very important consideration when planning, consideration routes in response to near simultaneous terrorist attacks is to ensure propile are moved away from other potential areas of vulnerability, or areas there a larger secondary device could detonate.

The decision to evacuate will nor celly be ours, but the police will advise. In exceptional cases they may insist on evacuation, a rouge they should always do so in consultation with your Security Manager, or it revent in Iready running this responsibility often lies with the event safety officer.

A general rule of the bold out if the device is external or internal to any premises or structure you a using or your event. If it is within a building you may consider evacuation, but if the device is outside he building it may be safer to stay inside.

Planning and initiation evacuation should be the responsibility of the event Security Manager in complitation with any resident security manager if a building is being used. Depending on size of your usiness and the location of the building, the plan may include:

cuation outside the event area or building.

vacuation of part of the event area or building, if the device is small and thought to be confined to one location (e.g. a small bag found in an area easily contained).

- Full or partial evacuation to an internal safe area, such as a protected space, if available.
- Evacuation of all staff apart from designated searchers.

#### **Evacuation**

+ Fu

Evacuation instructions must be clearly communicated to staff and routes and exits must be well defined. Appoint people to act as marshals and as contacts once the assembly area is

reached. Assembly areas should be a minium of 100, 200 or 400metres away dependant upon the size of the item. Care should be taken that there are no secondary hazards At the assembly point.

It is important to ensure that staff are aware of the locations of assembly areas for incident evacuation as well as those for fire evacuation and that the two are not confused by those responsible for directing members of the public to either.

#### **Grab bags**

A 'Grab Bag' should be available which contains essential equipment and information. All relevant contact information, the staff involved, tenants and other site information should be contained in an easily accessible format.

#### Suggested 'Grab Bag' contents:

Equipment:

- Emergency and Floor plans (laminated)
- List of Contacts (laminated) staff, head office, e
- Incident Log (consider dictaphone), notebook pens, parkers, etc.
- First aid kit designed for major emergence colleder large bandages, burn shields or cling film, large sterile strips, cold pasks, he'vy was well as standard equipment
- Torch and spare batteries or wind up
- Glow sticks
- Radio (wind up)
- High visibility jack
- Loud hailer articitation teries
- Hazard a cordon pe
- Plastic acs it honkets / bin liners
- st / xi yme masks
- Wait volastic container) and chocolate/glucose tablets
  - Computer back up tapes / disks / USB memory sticks or flash drives (see extra documents to e stored below).

#### ome extra items you could consider:

- Spare keys / security codes
- Mobile telephone with credit available, plus charger (wind up if possible).
- Disposable / Small camera.
- Hard hats / protective goggles / heavy duty gloves

### Documents which can be electronically stored if accessible, otherwise paper copy should be readily available:

- Business Continuity Plan your plan to recover your business or organisation.
- List of employees with contact details include home and mobile numbers. You may also wish to include next-of-kin contact details.

- Lists of customer and supplier details.
- Contact details for emergency glaziers and building contractors.
- Contact details for utility companies.
- Building site plan, including location of gas, electricity and water shut off points.
- Latest stock and equipment inventory.
- Insurance company details.
- Local authority contact details.

Make sure this pack or packs are stored safely and securely site on site or at an accessive emergency location nearby. Ensure items in the pack are checked regularly, are kept up date, and are working. Remember that cash / credit cards may be needed for expenditure.

This list is not exhaustive, and there may be other documents or equipment that shou included for your business or organisation.

areas

# Car parks should not be used as assembly areas and furtherm should always be searched before they are utilised.

Disabled staff should be individually briefed on their evacuation

### In the case of suspected:

#### Letter or parcel bombs

If in a premises evacuate the room and the floor concerns and the adjacent rooms along with the two floors immediately above and plow in aplicable. If the structures are of temporary construction then evacuate pleas 500 neares from the device.

#### Chemical, Biological and Radiologica cidents

Responses to Chemical, Biologica and Badix, gical (CBR) incidents will vary more than those involving conventional or inclusional devices, but the following general points should be noted:

- The exact nature of the inclusion to any not be immediately apparent. For example, an Improvised Example, an  $(IL_{\nu})$  might also involve the release of CBR material.
- In the event of a supected CBR incident within a building, switch off all air conditions ventilation and other systems or items that circulate air (e.g. fans and personal conditions). Do not allow anyone, whether exposed or not, to leave evacuation least ofore the emergency services have given medical advice, assessments or the time.

and windows and switch off any systems that draw air into the structure/building.

Agreation plan in advance with the police and emergency services, the local authority and any neighbours. Ensure that staff with particular responsibilities are trained and that all staff are drilled. Remember, too, to let the police know what action you are taking during any incident.

Security managers should ensure that they have a working knowledge of the heating, ventilation and air conditioning (HVAC) systems and how these may contribute to the spread of CBR materials within the structure/building.

#### **Protected Spaces**

Protected spaces in permanent structures may offer the best protection against blast, flying glass and other fragments. They may also offer the best protection when the location of the possible bomb is unknown, when it may be near your external evacuation route or when there is an external CBR attack.

Since glass and other fragments may kill or maim at a considerable distance of the centre of a large explosion, moving people into protected spaces is often safe than evacuating them onto the streets. Protected spaces should be loca

- In areas surrounded by full height masonry walls e.g. internal corridors, pilet areas or conference rooms with doors opening inwards.
- Away from windows and external walls.
- Away from the area in between the building's perimeter are the first line of supporting columns (known as the 'perimeter structural based)
- Away from stairwells or areas with access to lift, afts where these open at ground level onto the street, because blast the property up them. If, however, the stair and lift cores are entirely enclosed, they huld make good protected spaces.
- Avoiding ground floor or first the result
- In an area with enough space to contact the occupants.

When choosing a protected space, the advice from a structural engineer with knowledge of explosive effects of a do not neglect the provision of toilet facilities, seating, drinking water are compunications.

Consider duplicating tit can species or assets in other buildings at a sufficient distance to be a feet with an emergency that denies you access to you own. If this is impossible, that to locate vital systems in part of your building that offers similar protection to hat provided by a protected space.

### Communitions

insure unit staff know their security roles and that they or their deputies are always stactable. All staff, including night or temporary staff, should be familiar with any telephone recording, redial or display facilities and know how to contact police and security staff in or out of office hours.

Is essential to have adequate communications within and between protected spaces. You will at some stage wish to give the 'all clear', or tell staff to remain where they are, to move to another protected space or evacuate the building. Communications may be by public address system (in which case you will need standby power), hand-held radio or other standalone systems. Do not rely on mobile phones. You also need to communicate with the emergency services. Whatever systems you choose should be regularly tested and available within the protected space.

#### **Converting to open plan**

If you are converting your building to open plan accommodation, remember that the removal of internal walls reduces protection against blast and fragments.

Interior rooms with reinforced concrete or masonry walls often make suitable protected spaces as they tend to remain intact in the event of an explosion outside the building. If corridors no longer exist then you may also lose your evacuation routes, assembly or protected spaces, while the new layout will probably affect your bomb threat contingency procedures.

When making such changes, try to ensure that there is no significant reduction in staff protection, for instance by improving glazing protection. If your premises are already open plan and there are no suitable protected spaces, then evacuation may be your only option.

### **Open air events**

If your event is predominantly in the open with only temporary demountable structures uch as marquees, event kiosks or simply an open space, the protected space principle is realized to offer any suitable refuge and evacuation may again be your only option.

# eleven personnel security

Some external threats, whether from criminals, terrorists, or competitors seeking a business advantage, may rely upon the co-operation of an 'insider'.

This could be an employee or any contract or agency staff (e.g. cleaner, caterer, security guard) who has authorised access to your premises. If an employee, he or she may already be working for you, or may be someone newly joined who has infiltrated your organisation in order to seek information or exploit the access that the job might provide.

### What is personnel security?

Personnel security is a system of policies and procedures which seek to manage the risk staff or contractors exploiting their legitimate access to an organisation's assets of profor unauthorised purposes. These purposes can encompass many forms of crimital ac from minor theft through to terrorism.

The purpose of personnel security seeks to minimise the risks. It does this a rensuring that organisations employ reliable individuals, minimising the chances of the provide unreliable once they have been employed, detect suspicious behaviour, and resolving security concerns once they have become apparent.

ity,

This chapter refers mainly to pre-employment screening but gas, then should be aware that personnel screening should continue throughout the state of the employee. Further information regarding ongoing personnel screen the found www.cpni.gov.uk

### Understanding and assessing personal security risks

Organisations deal regularly with many arten at type of risk. One of them is the possibility that staff or contractors will exploit the performance that the organisation for illegitimate purposes. These risks can be reduced buy on never be entirely prevented. Instead, as with many other risks, the organism on enurgys a continuous process for ensuring that the risks are managed in a proportion and conseffective manner.

#### Data Protection A

The Data Protection (199A) 98) applies to the processing of personal information about individuals. Personnel sensity measures must be carried out in accordance with the data protection and the set obtain the act.

### Pream, oyment Screening

Present sector involves a number of screening methods, which are performed as part of the number process but also on a regular basis for existing staff. The ways in which screening performed varies greatly between organisations; some methods are very simple, or mare more sophisticated. In every case, the aim of the screening is to collect information about potential or existing staff and then to use that information to identify any individuals who present security concerns.

Pre-employment screening seeks to verify the credentials of job applicants and to check that the applicants meet preconditions of employment (e.g. that the individual is legally permitted to take up an offer of employment). In the course of performing these checks it will be established whether the applicant has concealed important information or otherwise misrepresented themselves. To this extent, pre-employment screening may be considered a test of character.

### **Pre-employment checks**

Personnel security starts with the job application, where applicants should be made aware that supplying false information, or failing to disclose relevant information, could be grounds for dismissal and could amount to a criminal offence. Applicants should also be made aware that any offers of employment are subject to the satisfactory completion of pre-employment checks. If an organisation believes there is a fraudulent application involving illegal activity the police should be informed.

Pre-employment checks may be preformed directly by an organisation, or this process may be sub-contracted to a third party. In either case the company needs to have a mar understanding of the thresholds for denying someone employment. For joint e, under what circumstances would an application be rejected on the basis of the criminal record, and why?

#### **Pre-employment screening policy**

Your pre-employment screening processes will be more encive if they be an integral part of your policies, practices and procedures for the recruiting, his and where necessary training of employees. If you have conducted a personnel sector, the ssment then this will help you to decide on the levels of screening that are appropriate for different posts.

#### Identity

Of all the pre-employment checks, identity provation is the most fundamental. Two approaches can be used:

- A paper-based approach involving provide infication of key identification documents and the matching of the cumer to the individual.
- An electronic approach ( volving searches on databases (e.g. databases of credit agreements or the control role) to establish the electronic footprint of the individual. The individual searches and to answer questions about the footprint which only the actual other of the dentity could answer correctly.

The Immig. Fight, a form and Nationality Act 2006 means there are requirements of enclosed to event illegal working in the UK. These include an ongoing responsibility to carry succhecks on employees with time-limited immigration status. Failure to comply with he new socialations could result in a possible civil penalty or criminal conviction. CPNI's gulance on pre-employment screening has been updated to reflect this new law. More detailed information can be found at www.gov.uk

### **Qualifications and employment history**

The verification of qualifications and employment can help identify those applicants attempting to hide negative information such as a prison sentence or dismissal. Unexplained gaps should be explored.

### Qualifications

When confirming details about an individual's qualifications it is always important to:

- Consider whether the post requires a qualifications check.
- Always request original certificates and take copies.
- Compare details on certificates etc. with those provided by the applicant.
- Independently confirm the existence of the establishment and contact them to confirm the details provided by the individual.

#### **Employment checks**

For legal reasons it is increasingly difficult to obtain character references, but past employed be asked to confirm dates of employment. Where employment checks are it is important to:

- Check a minimum of three but ideally five years previous employment.
- Independently confirm the employer's existence and contact details (in adding the line manager).
- Confirm details (dates, position, salary) with HR.
- Where possible, request an employer's reference from

#### **Criminal convictions**

A criminal conviction - spent or unspent - is not uncertain a bar to employment (see the Rehabilitation of Offenders Act). However, there are cruain posts where some forms of criminal history will be unacceptable. To the criminal record information, a company can request that an applicant either:

- 1. Completes a criminal record lf-deveation form, or
- 2. Applies for a Basic Discussure certicate from Disclosure Scotland.

### **Financial checks**

For some posts it not be used ble to carry out financial checks, for example where the employee's portion recurres the handling of money. Interpreting the security implications of financial history is not structure the and will require each organisation to decide where their thresholds have g, in terms of an acceptable level of debt).

There we asympter of ways in which financial checks can be carried out. General application for a set include an element of self-declaration (for example in relation to County Court (CCJs)), or the services of third party providers can be engaged to perform credit

### **Concractor recruitment**

Organisations employ a wide variety of contract staff, such as IT staff, cleaners, and management consultants. It is important to ensure that contractors have the same level of pre-employment screening as those permanent employees with equivalent levels of access to the company's assets, be they premises, systems, information or staff.

Contracts should outline the type of checks required for each post and requirements should be cascaded to any sub-contractors. Where a contractor or screening agency is performing the checks they should be audited.

#### Secure contracting

Contractors present particular personnel security challenges. For instance, the timescales employing contractors are often relatively short, and there is greater potential for security arrangements to be confused or overlooked (e.g. due to further sub-contracting).

In managing the insider risks associated with contractors it is important to:

- Ensure that pre-employment checks are carried out to the same statuce has for permanent employees. Where this is not possible, due to tight dear nes on lack of information available for background checking, then the result trisk must be managed effectively. Preferably the implementation of any a diticual security measures will be guided by a personnel security risk assessment.
- Where pre-employment checks or any other person security neasures - are carried Lovine. out by the contracting agency rather than the ganisation, a detailed ndarus account of the checks to be undertaken and he chieved must be incorporated into the contract that is drawn betwhen the two. Furthermore, the preemployment checking process conduct ·h. ontractor should be audited regularly. e C track, agency is the person who arrives for Confirm that the individual sent k work (e.g. using document verification electronic identity checking service). Once the contractor has sta k in the organisation, they will need to be managed securely. The following steps llb
- Carry out a risk associated with the enablish the threats and level of risk associated with the contractor acting valicity this sost.
- Ensure that the particulation and the contractor, or between the organisation and the contractor, or between the organisation and the contracting agency, defines the codes of practice and standards that opply.

Provide hoto usses to contract and agency staff, and stipulate that they must be worn obtained leally, the employing organisation should retain contractors' passes between visits, reissuing them each time only after the contractor's identity has been verifie. The employing organisation and the contracting agency (or the contractor, if no gency is involved) should agree a procedure for providing temporary replacements when the contractor is unavailable. These arrangements should be included in the contract between the two parties, and the employing organisation will need to decide what additional personnel security measures to implement - for example, restricted or supervised access - when the replacement is on site.

Where a contractor is in post but the necessary pre-employment checks have not been carried out - or where the results of the checks are not entirely positive but the need for the contractor's expertise is such that they are employed anyway - then additional personnel security measures must be considered (e.g. continuous supervision).
 For additional advice on 'Secure Contracting' please refer to 'A Good Practice Guide on Pre-Employment Screening' See www.cpni.gov.uk

### **Overseas checks**

As the level of outsourcing rises and increasing numbers of foreign nationals are employed, it is increasingly necessary to screen applicants who have lived and worked overseas. As far as possible, organisations should seek to collect the same information on overseas candidates as they would for longstanding UK residents (e.g. proof of residence, employment references, criminal record). It is important to bear in mind that other countries will have different legal and regulatory requirements covering the collection of information needed to manage personnel security and therefore this step may be difficult.

A number of options are available to organisations wishing to perform overseas checks:

- 1. Request documentation from the candidate.
- 2. Hire professional/ an external screening service.
- 3. Conduct your own overseas checks.

In some circumstances you may be unable to complete overseas checks a tisfactorily (the due to a lack of information from another country). In this case, you may decide to deny employment, or to implement other risk management controls (e.g. the provision) to compensate for the lack of assurance.

See Good Practice checklist - Personnel Security in Append

# twelve information security

The loss of confidentiality, integrity and most importantly availability of information in paper or digital format can be a critical problem for organisations. Many rely on their information systems to carry out business or nationally critical functions and manage safety and engineering systems.

Your confidential information may be of inters to business competitors, criminals, foreign intelligence services or terrorists. The ma

attempt to access your information by breaking into your IT systems, by obtaining the ata you have thrown away or by infiltrating your organisation. Such an attack could disrubusiness and damage your reputation.

When considering this type of attack you should look at facilities at the provide your event site and any other place you operate from. Many large event or sense will contract in security access control systems. Make sure it is clear who is the point le formanagement and security of data.

#### Before taking specific protective measures you show

- Assess the threat and your vulnerabilities Managing the Risks on Page 9).
- Consider to what extent is your information and x, who might want it, how might they get it, how would its loss or theft amage you
- Consider current good practice in a non-so drity for countering cyber attacks and for protecting documents.

For general advice on proteining as the rattack visit www.cpni.gov.uk or www.getsafeonline.org

### Cyber attacks convste

• Allow the ttacker to teal or alter remove sensitive information

• All by the attacker to gain access to your computer system and do whatever the system when an do. Mis could include modifying your data, perhaps subtly so that it is not in reducing apparent, installing malicious software (virus or worm) that may damage by system, or installing hardware or software devices to relay information back to the attact. Such attacks against internet-connected systems are extremely common.

ake your systems impossible to use through 'denial of service' attacks. These are increasingly common, relatively simple to launch and difficult to protect against.

Cyber attacks are much easier when computer systems are connected directly or indirectly to public networks such as the internet.

#### The typical methods of cyber attack are:

#### **Malicious software**

The techniques and effects of malicious software (e.g. viruses, worms, trojans) are as variable as they are widely known. The main ways a virus can spread are through:

- 1. Running or executing an attachment received in an email.
- 2. Clicking on a website link received in a website.
- 3. Inappropriate web browsing which often leads to a website distributing m software.
- 4. Allowing staff to connect removable memory devices (USB memory stice disks, ČD's, DVD's) to corporate machines.
- 5. Allowing your staff to connect media players and mobile players by corporate machines.

#### **Denial of service (DoS)**

These attacks aim to overwhelm a system by floorling, when the anted data. Some DoS attacks are distributed, in which large numbers of these d, 'innocent' machines (known as 'zombies') are conscripted to mount attacks

#### Hacking

This is an attempt at unauthorised press, almost dways with malicious or criminal intent. Sophisticated, well-concealed attacks by the ign intelligence services seeking information have been aimed at government extension other organisations might also be targets.

### Malicious mode cation of hardware

Computer hardware can be modified so as to mount or permit an electronic attack. This is normally done to the point or nanufacture or supply prior to installation, though it could also be done during maintering evisits or by insiders. The purpose of such modifications would be to allow a substance attack to be made, possibly by remote activation.

#### M . to

• Acque your IT systems from reputable manufacturers and suppliers.

nsure that your software is regularly updated. Suppliers are continually fixing security Inerabilities in their software. These fixes or patches are available from their websites - consider checking for patches and updates daily.

- Ensure that all internet-connected computers are equipped with anti-virus software and are protected by a firewall.
- Back up your information, preferably keeping a secure copy in another location.
- Assess the reliability of those who maintain, operate and guard your systems (refer to the section on Personnel Security on page 39)
- Consider encryption packages for material you want to protect, particularly if taken offsite but seek expert advice first.
- Take basic security precautions to prevent software or other sensitive information falling into the wrong hands. Encourage security awareness among your staff, training

them not to leave sensitive material lying around and to operate a clear desk policy (i.e. desks to be cleared of all work material at the end of each working session).

- Make sure your staff are aware that users can be tricked into revealing information which can be used to gain access to a system, such as user names and passwords.
- Invest in secure cabinets, fit locking doors and ensure the proper destruction of sensitive material
- Where possible, lock down or disable disk drives, USB ports and wireless connections.
- Ensure computer access is protected by securely controlled, individual passwords or by biometrics and passwords.
- Implement an acceptable use policy for staff concerning web browsing, email use chat rooms, social sites, trading, games and music download websites.

Organisations can seek advice from the Government website - www.getsafeonline.org

#### Examples of cyber attacks

- A former systems administrator was able to intercept e-mailber set. The system of the system of the system
- A former employee was able to connect to a system reaction of made changes to a specialist digital magazine, causing loss of confidence along the omers and shareholders.

### Disposal of sensitive information

Companies and individuals sometimes needed dispute of sensitive information. Some of the material that businesses routinely three away could of use to a wide variety of groups including business competitors, identity process, servinals and terrorists.

The types of information vary can see names and addresses, telephone numbers, product information, customer details information falling under the Data Protection Act, technical specifications and chemic and colore al data. Terrorist groups are known to have shown interest in the last two are

#### The principal can destroying sensitive waste are:

#### Shredding

lan

Industry inductors and document shredding do not currently exist in the UK: but have been established a Germany for some time (DIN). Much of the EU has adopted the German

dding achines specified to DIN 32757 - 1 level 4 will provide a shred size 15mm x a. Suitable for medium to high security requirements.

### Incineration

Incineration is probably the most effective way of destroying sensitive waste, including disks and other forms of magnetic and optical media, provided a suitable incinerator is used (check with your local authority). Open fires are not reliable as material is not always destroyed and legible papers can be distributed by the updraft.

## Pulping

This reduces waste to a fibrous state and is effective for paper and card waste only. However, some pulping machines merely rip the paper into large pieces and turn it into a papier maché product from which it is still possible to retrieve information. This is more of a risk than it used to be because inks used by modern laser printers and photocopiers do not run when wet.

There are alternative methods for erasing digital media, such as overwriting and degaussing. For further information visit www.cpni.gov.uk

#### Before investing in waste destruction equipment should be a should be should be should be

- If you use contractors, ensure that their equipment and procedures the up to standard. Find out who oversees the process, what kind of equipment mey have a domether the collection vehicles are double-manned, so that one operator remains with the vehicle while the other collects. Communications between vehicle to base are also desirable.
- Ensure that the equipment is up to the job. The second the material you wish to destroy, the quantities involved and how conden bit is.
- Ensure that your procedures and staff the point investing in expensive equipment if the people in the people of the people of
- Make the destruction of sensitive wastern esponsibility of your security department rather than facilities managered

See good practice checkling form on Security in Appendix 'H'

# thirteen vehicle borne improvised explosive devices (VBIEDs)

Vehicle Borne Improvised Explosive Devices (VBIEDs) are one of the most effective weapons in the terrorist's arsenal. They are capable of delivering a large quantity of explosives to a target and can cause a great deal of damage.

Once assembled, the bomb can be delivered at a time of the terrorist's choosing and with reasonable precision, **depending on defences**. It can be detonated from a safe distance using a timer or remote control, or can be detonated on the spot by a suicide bomber.

Building a VBIED requires a significant investment of time, resources and expertise. Reca of this, terrorists will seek to obtain the maximum impact for their investment.

# Terrorists generally select targets where they can cause most damage, inflict r casualties or attract widespread publicity.

### **Effects of VBIEDs**

VBIEDs can be highly destructive. It is not just the effects of a direct back blast that can be lethal, flying debris such as glass can present a hazard manufacture hway om the seat of the explosion.

### What you can do

If you think your event could be at risk from any orrest PLED you should:

- Ensure you have effective vehicle accurptont comparticularly at goods entrances and service yards. Do not allow uncharked valicles park within the event areas or next to public areas where there will be the numbers of people or where there is a risk of structural collapse.
- Insist that details of context vehices and the identity of the driver and any passengers approaching your genes/sectors as are authorised in advance.
- Consider a very le ser compgime at goods/service entrances that is flexible and can be tailored to change in threat or response level. It may be necessary to carry out a risk assessment for the schefit of security staff who may be involved in vehicle access control.
  - table and renearse bomb threat and evacuation drills. Bear in mind that, depending where the suspected VBIED is parked and the layout of your event, it may be safer dowless corridors or basements than outside if this facility is available.
- Consider using robust physical barriers to keep all but authorised vehicles at a ife distance. Seek the advice of your local Police Counter Terrorism Security Advisor (CTSA) on what these should be and on further measures such as electronic surveillance including Automatic Number Plate Recognition (ANPR) and protection from flying glass.
- Train and rehearse your staff in identifying suspect vehicles, and in receiving and acting upon bomb threats. Key information and telephone numbers should be prominently displayed and readily available.

• It should be emphasised that the installation of physical barriers needs to be balanced against the requirements of safety and should not be embarked upon without full consideration of planning regulation and fire safety risk assessment.

See Good Practice Checklist - Access Control in Appendix 'C'

# fourteen chemical, biological and radiological (CBR) attacks

Since the early 1990s, concern that terrorists might use CBR materials as weapons has steadily increased. The hazards are:

### Chemical

Poisoning or injury caused by chemical substances, including ex-military chemical warfare agents or legitimate but harmful household or industrial chemicals.

# Biological

Illnesses caused by the deliberate release of dangerous bacteria, viruses fungi, or biological toxins such as the plant toxin ricin.

# Radiological

Illnesses caused by exposure to harmful radiin tive, exteria, contaminating the environment.

A radiological dispersal device (RDD), often referred to as a structure bomb', is typically a device where radioactive materials are combined with a structure tional explosions. Upon detonation, no nuclear explosion is produced but, depending on the traction the radioactive source, the surrounding areas become contaminated

As well as causing a number of casus, as from the initial blast, there may well be a longer term threat to health. A number of term of groups have expressed interest in, or attempted to use, a 'dirty bomb' as a meriod on trace.

Much of the CBR-related active seen to date has either been criminal, or has involved hoaxes and false alarms. Since have or ar only been a few examples of terrorists using CBR materials. The most potable are the 1995 sarin gas attack on the Tokyo subway, which killed twelve people, and the 2001 anthrax letters in the United States, which killed five people.

CBR we cons have een little used so far, largely due to the difficulty in obtaining the materials and the complexity of using them effectively. Where terrorists have tried to carry out CB matterials they have generally used relatively simple materials. However, Al Qaida and the ups have expressed a serious interest in using CBR materials. The impact of any terrist car attack would depend heavily on the success of the chosen dissemination and the weather conditions at the time of the attack.

The likelihood of a CBR attack remains low. As with other terrorist attacks, you may not receive prior warning of a CBR incident. Moreover, the exact nature of an incident may not be immediately obvious. First indicators may be the sudden appearance of powders, liquids or strange smells, with or without an immediate effect on people.

Good general physical and personnel security measures will contribute towards resilience against CBR incidents. Remember to apply appropriate personnel security standards to contractors, especially those with frequent access to your site.

#### What you can do

- Review the physical security of any air-handling systems, such as access to intakes and outlets.
- Improve air filters or upgrade your air-handling systems, as necessary.
- Restrict access to water tanks and other key utilities.
- Review the security of your food and drink supply chains.
- The Home Office advises organisations against the use of CBR detection technologies as part of their contingency planning measures at ent. Thi because the technology is not yet proven in civil settings and, rent of a the CBR incident, the emergency services would come on scen vith ppro riate detectors and advise accordingly. A basic awareness of CE three ano . ∠ards, combined with general protective security measures (e.g. screening sit , CCTV monitoring and active response of perimeters and ent g alert to suspicious deliveries) should offer a good level of resilien In the first instance, seek advice from your local police force CTSA.
- If there is a designated protected space availability also be suitable as a CBR shelter, but seek specialist advice from your calculute force CTSA before you make plans to use it in this way.
- Consider how to communicate necessary and advice to staff and how to offer reassurance. This needs to include the superior to those who want to leave or return to the event site.

# fifteen suicide attacks

Historically crowded places, symbolic locations and key installations have been identified and targeted by suicide bombers. The use of suicide bombers is a very effective method of delivering an explosive device to a specific location. Suicide bombers may use a lorry, plane or other kind of vehicle as a bomb or may carry or conceal explosives on their persons. Suicide attacks are generally perpetrated without warning.

When considering protective casures inst suicide bombers, think in terms of:

- Using physical barriers, prevent a batile vehicle from driving into your event through main entrances, goods/service mance, pedestrian entrances or open land.
- Denying accepto a sychicle that arrives at your goods/service entrances without prior notice and adding vehicles at access control points into your event until you can satisfy yourself that the are genuine.
- We prever possible, establishing your vehicle access control point at a distance from the provided subsetting up regular patrols and briefing staff to look out for anyone behaving subsetting up that subsetting the provided subsetting the provided staff. The provided subsetting the provided staff to look out for anyone behaving subsetting up to the provided staff.

are that no one visits your protected area without your being sure of his or her identity or without proper authority. Seek further advice through your local police force's Counter Terrorism Security Advisor (CTSA) and/or Police Security Co-ordinator (SecCo).

• Effective CCTV systems especially with an active response, may deter a terrorist attack or even identify planning activity. Good quality images can provide crucial evidence in court.

There is no definitive physical profile for a suicide bomber, so remain vigilant and report anyone suspicious to the police.

See Hostile Reconnaissance - page 57

# sixteen firearm and weapon attacks

Terrorist use of firearms and weapons is still infrequent, but it is important to consider this method of attack and be prepared to cope with such an incident. Below is some general guidance to aid your planning in this area.

### **Stay Safe**

- Find the best available ballistic protection.
- Remember, out of sight does not necessarily mean out of danger, especially are not ballistically protected.

GOOD COVER	BAD COVER
Substantial Brickwork or Concrete	Internal Partition Wa
Engine Blocks	Car Doors
Base of Large Live Trees	Wooden Fenc
Natural Ground Undulations	Glazin

#### See

- It is a firearms / weapons incident.
- Exact location of the incident.
- Number of gunmen.
- Type of firearm are they using a sub-barrelied weapon or handgun
- Direction of travel are they many particular direction

Consider the use of CCT any other mote methods of confirmation reducing vulnerabilities to staff.

#### Tell

- Who Impediately intact the police by calling 999 or via your control room, giving them internation shown under **Confirm**
- How the all the channels of communication available to you to inform visitors and staff
- Plan for a firearms / weapons incident.
  - 1. Now you would communicate with staff and visitors
  - 2. What key messages would you give to them in order to keep them safe.
  - 3. Think about incorporating this into your emergency planning and briefings
- Test your plan before you run your event

#### Act

- As far as you can, limit access and secure your immediate environment.
- Encourage people to avoid public areas or access points. If your have rooms at your location, lock the doors if possible and remain quiet.

See Physical Security on page 15.

If you require further information please liaise with your Counter Terrorism Security Advisor (CTSA).

# seventeen communication

You should consider a communication strategy for raising awareness among staff and others who need to know about your security plan and its operation. This will include the emergency services, local authorities and possibly neighbouring premises/areas.

There should also be arrangements for dealing with people who may be affected by your security operation but who are not employees of your organisation (e.g. customers, clients, contractors, visitors).

It should be remembered that immediately following a terrorist attack, mobile telephone communication may be unavailable due to excessive demand.

Security Managers should regularly meet with staff to discuss security issues and staff to raise their concerns about security.

Consideration should be given to the use of any event website and/or publications to communicate crime prevention and counter terrorism initiatives.

All Security Managers should involve their local Counter Terrorism Security Co-ordinator (CTSA) and/or Police Security Co-ordinator (SecCo) when considering improvements to an established site or premises for the purposes of holding a security event.

See Good Practice Checklist - Communication in Appe

# eighteen hostile reconnaissance

Hostile reconnaissance is used to provide information to operational planners on potential targets during the preparatory and operational phases of terrorist operations.

## **Primary Role of Reconnaissance**

- Obtain a profile of the target location.
- Determine the best method of attack.
- Determine the optimum time to conduct the attack.

Reconnaissance operatives may visit potential targets a number of times prior to the pro-active security measures are in place, particular attention is paid to any variation se patterns and the flow of people in and out.

Operation Lightning is a national intelligence gathering operation to reconversearch, investigate and analyse:

- Suspicious sightings.
- Suspicious activity.

#### at or near:

• Crowded places.

#### or prominent or vulnerable:

- Buildings.
- Structures.
- Transport infrastructure.

The ability to recognise the engaged in hostile reconnaissance could disrupt an attack and produce important, transferregence leads.

#### What to look for

- Significant interest being taken in the outside of your event site including parking areas, delivery gates, doors and entrances.
- Groups or individuals taking significant interest in the location of CCTV cameras and controlled areas.
- People taking pictures, filming, making notes or sketching of the security measures around events. Tourists should not necessarily be taken as such and should be treated sensitively, but with caution.
- Overt/covert photography, video cameras, possession of photographs, maps, blueprints etc, of critical infrastructures, electricity transformers, gas pipelines, telephone cables, etc.

- Possession of maps, global positioning systems (GPS), photographic equipment (cameras, zoom lenses, camcorders). GPS will assist in the positioning and correct guidance of weapons such as mortars and Rocket Propelled Grenades (RPGs). This should be considered a possibility up to one kilometre from any target.
- Vehicles parked outside buildings of other facilities, with one or more people remaining in the vehicle, for longer than would be considered usual.
- Parking, standing or loitering in the same area on numerous occasions with no apparent reasonable explanation.
- Prolonged static surveillance using operatives disguised as demonstrators, street sweeper, etc or stopping and pretending to have car trouble to test response time for emotion, prvices, car recovery companies, (AA, RAC etc) or local staff.
- Simple observation such as staring or quickly looking away.
- Activity inconsistent with the nature of the building or event.
- Unusual questions number and routine of staff/VIP's visiting e site or event.
- Individuals that look out of place for any reason.
- Individuals that appear to be loitering in public area.
- Individuals asking questions regarding the idea it of matteristics of individual visitors, groups of visitors, or the jobs or nationalities of visitors, at attend or may visit the event.
- Persons asking questions regarding a vity and evacuation measures.
- Persons asking questions regarding the stan hangouts.
- Persons asking question regarding Versisits.
- Delivery vehicle in front de event.
- Vehicles, partiges, lugge t unattended.
- Vehicles opean over veight.
- Persons ar sing count pedestrians/vehicles.
  - walking around perimeter of the event.
  - cople 'ncoing' drinks and being over attentive to surroundings. Persons loitering around area prolonged amount of time.

Persons attempting to access plant equipment or chemical areas.

- Delivery vehicles or other trucks attempting to access the main driveway to the event.
- Delivery vehicles arriving at the event at the wrong time or outside of normal hours.
- Vehicles emitting suspicious odours e.g. fuel or gas.
- Vehicle looking out of place.
- Erratic driving.

tran

- Questions regarding the event structure.
- Noted pattern or series of false alarms indicating possible testing of security systems and observation of response behaviour and procedures, (bomb threats, leaving hoax devices or packages).

- The same vehicle and different individuals or the same individuals in a different vehicle returning to a location(s).
- The same or similar individuals returning to carry out the same activity to establish the optimum time to conduct the operation.
- Unusual activity by contractor's vehicles.
- Recent damage to perimeter security, breaches in fence lines or walls or the concealment in hides of mortar base plates or assault equipment, i.e. ropes, ladders, food etc. Regular perimeter patrols should be instigated months in advance of a high profile event to ensure this is not happening.

to

oot

- Attempts to disguise identity motorcycle helmets, hoodies, etc. or multiple sets of cloth change appearance.
- Constant use of different paths, and/or access routes across a site. 'Learning the route' c surveillance involving a number of people who seem individual but are working together
- Multiple identification documents suspicious, counterfeit, altered document
- Non co-operation with police or security personnel.
- Those engaged in reconnaissance will often attempt to enterpremise to as as the internal layout and in doing so will alter their appearance and provide to the set.
- In the past reconnaissance operatives have drawn attention of mselves by asking peculiar and in depth questions of employees or others more finite with the avironment.
- Sightings of suspicious activity should be passed in the edition, to security management for CCTV monitoring, active response were possible to the edit recorded for evidential purposes.

THE ROLE OF RECONNAISSANCE HAS COME LEASINGLY IMPORTANT TO TERRORIST OPERATIONS.

Reconnaissance trips may be indertaken as a rehearsal to involve personnel and equipment that will be used in the child a lock experience the London attacks on 7th July 2005, the bombers staged a trial run ine day, refore the actual attack.

Reporting sus trioun activity of police that does not require an immediate response, contact the ONFIDER AL ANTI-TERRORIST HOTLINE - 0800 789 321

ANY IMPLENT IN TREQUIRES AN IMMEDIATE RESPONSE - DIAL 999.

# I nineteen high profile events

There may be events, which for various reasons, are deemed to be more high profile and therefore more vulnerable to attack. This may involve pre-event publicity of the attendance of a VIP or celebrity, resulting in additional crowd density on the event day and the need for an appropriate security response and increased vigilance.

In certain cases the local police may appoint a police Gold Commander (Strategic Commander in Scotland) with responsibility for the event; who may in turn, appoint a Police Security Co-ordinator (SecCo) and/or a Police Search Adviser (PolSA).

## Police Security Co-ordinator - SecCo

The Police Security Co-ordinator (SecCo) has a unique role in the planning and or of security measures at high profile events.

The SecCo works towards the strategy set by the Police (Gold) Strategic Commander acts as an adviser and co-ordinator of security issues.

A number of options and resources are available to the SecCo, which you conclusion with event management, identifying all the key individuals, agenus an elepartments involved in the event, as well as seeking advice from the respect Counter Perrorism Security Advisor (CTSA) on all terrorism related and protective security issue

The SecCo will provide the Gold/Strategic Commander with the second properties of observations and recommendations to ensure that the security respective realistic and proportionate.

## Police Search Advisor - PolSA

ahan

pr

ecte

The SecCo can deem it necessary to a point Police Parch Adviser (PolSA) to a high profile event.

The PoISA will carry out an asy smelling for venue and nature of the event, taking into consideration an up to date the eat assemble and other security issues.

A report, including the Poul's as used ent, recommendations and subsequent search plan will be submitted though the ecco to the Gold/Strategic Commander.

## Enhanced ecurity Provision at High Profile Events

During Hig., Prove Events there may be extra threats not only from terrorism but criminal activity settically on potive groups, fixated persons, self-publicists and lone adventurers.

me ares may be required in order to provide static protection or in order to r reduce the opportunity for attack by placing defensive perimeters between any erson and a potential attacker.

Description on the nature of the threat and outcome of the risk management process, consideration should be given to a range of physical, technical and procedural protective security options that may, on their own, be sufficient to exclude, deter, detect or disrupt the threat.

### What measures need to be considered

For major events an "Island Site" is commonly created to provide a sterile zone around it, with secure perimeter access which is rigorously controlled by static protection measures.

Physical and technical security measures may include:

- Physical protection measures such as extra doors, locks, lighting and target hardening.
- Technical measures including enhanced or extended CCTV and alarms if required.
- Vehicle security at the event site.

Personal safety advice to VIP's on reducing their own vulnerability when travelling to from a venue, avoiding predictable routines, etc.

Care and retention of sensitive information and communications, this is particular, pertinent when advertising the event, is the event public or private, official or unofficial and the event of pre-publicity or public knowledge of an event may cause the level of a real presultant planning to change considerably.

Early identification of all organisations involved in the event, their oles and responsibilities. Including details of the structures of each organisation and links between responsibilities functional levels.

The circumstances under which an event will be discretinues and the method and ownership for such decisions, and means by which by which the sume municated.

The circumstances under which a venue will evaluated VIP's removed.

Clarification of the role, powers and carability of a private security staff or stewards either permanent or temporarily contracted for the solutific event. This includes any specialist skills required for searching, e.g. operation search equipment, search arches or luggage scanning.

Prepare lists for **restricted circulation of sensitive** material above), incorporation vited and confirmed guests, chronology of events, copies of invitations, car passes are any other remaint materials, such as plans, maps and contact lists, etc.

Specimen copies of any a reditation passes and badges allowing access to the various security zones acc.

Create security ones whin the secure perimeter to segregate VIP's from invited guests, the general put cancel of an edia, etc. Consider providing a 'Green Room' or place of safety where a Vir can'd shelter in the event of an incident.

routes to and from the venue, as well as safe evacuation / escape routes.

A negement of parking for VIP vehicles and consideration of parking restrictions adjacent to the value if a VBIED threat is identified.

osure the personnel security and secure contracting principles referred to in chapter eleven are strictly adhered to for secure areas and island sites.

Where a particular venue is likely to be used as a more permanent venue or on a long term basis, Crime Prevention Through Environmental Design (CPTED) principles should be considered along side any appropriate Counter Terrorism security advice, with the aim of designing out identified structural vulnerabilities.

Liaison with security providers and other partners should be ongoing rather than a 'one-off' process.

See good practice checklist - High Profile Events in Appendix 'J'.

entity

# twenty threat levels

Information about the national threat level is available on the MI5 - Security Service Home Office and UK Intelligence Community Websites.

Terrorism threat levels are designed to give a broad indication of the likelihood of a terrorist attack. They are based on the assessment of a range of factors including current intelligence, recent events and what is known about terrorist intentions and capabilities. This information may well be incomplete and decisions about the appropriate security response should be made with this in mind.

In particular, those who own, operate, manage or work at major events are reminded that SUBSTANTIAL and SEVERE both indicate a high level of three that an attack might well come without warning.

### **Threat Level Definitions**

CRITICAL	AN ATTACK IS EXPECTED IMMIN. TTLY
SEVERE	AN ATTACK IS HIGHLY L KEL
SUBSTANTIAL	AN ATTACK IS A STRUNG SSIBILITY
MODERATE	AN ATTACK SPOSSIBLE BUT NOT LIKELY
LOW	AN ATTACK INLIKELY

#### **Response Levels**

Response levels provide a broad and tion of the protective security measures that should be applied at any particular time they are provided by the threat level but also take into account specific assessments on ulnerability and risk.

Response levels tendeto relater sites, whereas threat levels usually relate to broad areas of activity.

There are a varie, of the specific security measures that can be applied within response levels, although the same beasures will not be found at every location.

The security measures deployed at different response levels should not be made public, to avoid her rming terrorists about what we know and what we are doing about it.

hree vels of response which broadly equate to threat levels as shown below:

CRITICAL	EXCEPTIONAL
SEVERE	HEIGHTENED
SUBSTANTIAL	
MODERATE	NORMAL
LOW	NORMAL

### **Response Level Definitions**

RESPONSE LEVEL	DESCRIPTION
EXCEPTIONAL	Maximum protective security measures to meet so c threats and to minimise vulnerability and risk.
HEIGHTENED	Additional and sustainable protective security neasure reflecting the broad nature of the threader thined with specific business and geographical vulner bilither and judgements on acceptable risk.
NORMAL	Routine baseline protective security of ures, appropriate to your business and location.

#### What can I do now?

- Carry out a risk and vulnerability assessment hat is specific to your event.
- Identify a range of practical protection curity measures appropriate for each of the response levels. You other Terrorism Security Advisor can assist you with this.
- Make use of the poor ractive checklists on the following pages to assist you in your decision, aking pages.

The counter ment to be oplemented at each response level are a matter for individual premises or canisation and will differ according to a range of circumstances.

All protective security reasures should be identified in advance of any change in threat and response level and could be clearly notified to those staff who are responsible for ensuring

# good practice checklists

The following checklists are intended as a guide for those who manage events to assist them in identifying the hazards and risks associated with counter terrorism planning.

# They are not however exhaustive and some of the guidance might not be relevant to all events.

The checklists should be considered taking the following factors into account:

- Have you consulted your, Counter Terrorism Security Advisor, Police Security Coordinator, local authority and local fire and rescue service?
- Who else should be included during consultation e.g. Highway Manager, Operation Manager and Land Owner?
- Which measures can be implemented with ease?
- Which measures will take greater planning and investment?

# appendix a

### **Business Continuity**

Business continuity			
	Yes	No	Unsure
Do you have a Business Continuity Plan2			
Do you regularly review and update your			
Have you concerned firearm and reap. attact in your plans?			
Are your staff trained in activate and operating your plan?			
Have you prepared an emethody by ag?
