

Weekly Influenza and COVID-19 Surveillance graphs

PHE publishes a weekly national influenza and COVID-19 surveillance report which summaries the information from the surveillance systems which are used to monitor influenza, COVID-19 and other seasonal respiratory viruses in England.

Additional figures based on these surveillance systems are included in this slide set.

The figures presented in this slide set are based on data from week 45 (between 2 and 8 November 2020).

Confirmed COVID-19 cases in England

Weekly COVID-19 incidence per 100,000 population by age group and region, weeks 36-45

Weekly COVID-19 incidence per 100,000 population by ethnicity and region, weeks 36-45

Weekly COVID-19 rate per 100,000 population by IMD quintile (1 being the most deprived and 5 being the least deprived), weeks 36-45

Week number

Cumulative rate of COVID-19 cases per 100,000 population tested under Pillar 1 and 2, by upper-tier local authority, England (box shows enlarged map of London area)

Cumulative rate (from week 27) of COVID-19 cases per 100,000 population tested under Pillar 1 and 2, by upper-tier local authority, England (box shows enlarged map of London area)

Public Health
England

Community surveillance

Number of COVID-19 confirmed clusters or outbreaks by type of educational setting, England

Cumulative number of confirmed COVID-19 clusters or outbreaks by type of educational setting and PHE Centre since week 36, England

PHE Centres	Nursery	Primary school	Secondary school	Special Educational Needs (SEN) schools	College/University	Total
East of England	5 (1)	12 (0)	30 (3)	6 (0)	11 (0)	64 (4)
East Midlands	24 (7)	93 (17)	66 (7)	17 (5)	18 (0)	218 (36)
London	24 (5)	116 (22)	153 (10)	25 (3)	34 (2)	352 (22)
North East	1 (0)	16 (0)	19 (0)	7 (0)	5 (0)	48 (0)
North West	15 (0)	57 (0)	74 (0)	31 (2)	9 (0)	188 (2)
South East	34 (6)	78 (11)	104 (11)	20 (3)	18 (0)	252 (31)
South West	13 (0)	40 (4)	49 (4)	4 (3)	19 (0)	135 (11)
West Midlands	25 (4)	141 (2)	128 (13)	20 (4)	21 (0)	335 (23)
Yorkshire and Humber	27 (5)	95 (6)	75 (4)	27 (1)	21 (0)	245 (16)
Total	168 (28)	648 (42)	698 (52)	167 (21)	156 (2)	1737 (145)

*Number of outbreaks for Week 45 in brackets

Contacts by exposure/activity setting in week 45, England (Data source: NHS Test and Trace)

Note: categories have been grouped as follows: leisure / community includes eating out, attending events and celebrations, exercising, worship, arts, entertainment or recreation, community activities and attending play groups or organised trips; other workplace includes: retail, manufacturing or construction, hospitality, transport, emergency services or border force, food production and agriculture, prison, financial services, civil service or local government, information and communication, military, critical national infrastructure. Personal services includes hairdressers, barbers, tattooists and nail bars.

Events and activities reported by people testing positive, prior to symptom onset in week 45, England (Data source: NHS Test and Trace)

Note: 'Other' includes a wide range of different activities and settings, each of which has small numbers of individuals, as well as activities which did not fit any specific category and were added as Other by the case. This includes:

(all within 'activities': Arts entertainment or recreation; Civil service or government; Close contact services; Community and charity activities; Critical national infrastructure; Emergency services; Financial services; Food production; Hospitality; Immigration border services; Information and communication; Military; Personal care; Prison; Private events and celebrations; Public events and mass gathering; event within a shared household; Sport events; Supported living; Teaching and education; Transport;

'Other (combined)' includes all exposure group types that have small counts such as "went to church", "went to the zoo" within that event type.

Common locations reported by people testing positive in week 45, England (Data source: NHS Test and Trace)

Of the 10,8831 cases in week 45 reported for contact tracing, 25,914 (24%) had a common exposure with at least 1 other case. 8,163 common locations/settings were reported in total (of which the table calculates % of the most frequent). Supermarkets were the most frequently reported common location, followed by pubs or bars, and then going to a restaurant or café.

Setting	Number of common locations reported	Proportion of all common locations reported
Supermarket (visting and working)	1231	15.1%
Pub or bar (visting)	630	7.7%
Restaurant or cafe (visting)	364	4.5%
Gym (visting)	309	3.8%
Hospital (visting)	301	3.7%
Food and drink (working)	296	3.6%
Secondary school (attending)	285	3.5%
Care home (working)	199	2.4%
Hotel (home/shared)	163	2.0%
Warehouse (working)	148	1.8%
Primary school (attending)	147	1.8%
Household fewer than 5 (home/shared)	144	1.8%
University (attending)	111	1.4%
Clothes shopping (visting)	110	1.3%
Home (visting)	92	1.1%
Nursery preschool (attending)	89	1.1%
General practice (visting)	86	1.1%
Campsite (home/shared)	84	1.0%

Common Exposure Reports use NHS Test and Trace enhanced contact tracing data to identify locations or activities reported by 2 or more cases. Once a case enters the NHS Test and Trace system, enhanced contact tracing information is collected on household, workplace, education and activities in the 7-2 day period before symptom onset (or date of test if onset date is not provided). Data collected for this period is primarily used to identify where someone may have caught their infection.

Data presented are for common exposures within the enhanced contact tracing data with a known postcode only. Activities, household and workplace events reported by cases are grouped based on a shared postcode. Any event with ≥ 2 cases associated with it (≥ 2 persons declaring the same postcode with onsets (or date tested if unavailable) the last 7 days) is defined as a common exposure and is included in this report.

Locations with more visitors are more likely to be identified as common exposures. No adjustment has been made for how commonly a location is visited. The exposure category selected is the most commonly identified among all individuals with an event at that postcode. The exposure category can change retrospectively therefore, changing the most common exposure as reported here.

Common exposures identified in this way are not always indicative of epidemiological linkage between the cases and require further investigation. Some will be coincidental rather than relating to potential/actual transmission events.

Surveillance in 'educational-age' cohorts

Methodology and limitations

- Data source: SGSS Pillar 1 (NHS and PHE testing) and Pillar 2 (community testing) – England
- Educational-age cohorts have been calculated using dates of birth that correspond to a particular year group. School year groups run from 1 September to 31 of August of the following calendar year.
- We include all cases regardless of whether or not they attended an educational setting or whether or not the educational setting was open during the reporting period
- Data for the most recent week are provisional and likely to be an underestimate

Methodology and limitations - Birth cohort – Year group

- The table aside represents the birth cohorts for each year group

Birth cohort			Year group
01/09/1998	to	31/08/1999	Uni Year 4
01/09/1999	to	31/08/2000	Uni Year 3
01/09/2000	to	31/08/2001	Uni Year 2
01/09/2001	to	31/08/2002	Uni Year 1
01/09/2002	to	31/08/2003	Year 13
01/09/2003	to	31/08/2004	Year 12
01/09/2004	to	31/08/2005	Year 11
01/09/2005	to	31/08/2006	Year 10
01/09/2006	to	31/08/2007	Year 9
01/09/2007	to	31/08/2008	Year 8
01/09/2008	to	31/08/2009	Year 7
01/09/2009	to	31/08/2010	Year 6
01/09/2010	to	31/08/2011	Year 5
01/09/2011	to	31/08/2012	Year 4
01/09/2012	to	31/08/2013	Year 3
01/09/2013	to	31/08/2014	Year 2
01/09/2014	to	31/08/2015	Year 1
01/09/2015	to	31/08/2016	Reception
01/09/2016	to	31/08/2017	Pre-school
01/09/2017	to	31/08/2018	Nursery

Weekly number of laboratory confirmed COVID-19 cases in nursery/preschool, primary, secondary and college/university age cohorts

Weekly incidence of laboratory confirmed COVID-19 cases per 100,000 population in nursery/preschool, primary school, secondary school and college/university age cohorts, week 35 to 45

Weekly incidence of laboratory confirmed COVID-19 cases per 100,000 population in educational age cohorts presented by Year group, from nursery to Year 6, week 35 to 45

Weekly incidence of laboratory confirmed COVID-19 cases per 100,000 population in educational age groups presented by secondary school year groups (Year 7 to Year 13), week 35 to 45

Weekly incidence of laboratory confirmed COVID-19 cases per 100,000 population in educational age cohorts corresponding to university/college year groups, week 35 to 45

Weekly incidence of laboratory confirmed COVID-19 cases per 100,000 population by educational age cohorts and PHE region, week 35 to 45

Weekly number of new laboratory confirmed COVID-19 cases in educational age cohorts presented by Year group, from nursery to Year 6, week 35 to 45

Weekly number of new laboratory confirmed COVID-19 cases in educational age cohorts presented by Year group, from nursery to Year 6

Weekly number of new laboratory confirmed COVID-19 cases in educational age groups presented by secondary school year groups (Year 7 to Year 13), week 35 to 45

Weekly number of new laboratory confirmed COVID-19 cases in educational age groups presented by secondary school year groups (Year 7 to Year 13)

Weekly number of new laboratory confirmed COVID-19 cases in educational age cohorts corresponding to university/college year groups, week 35 to 45

Weekly number of new laboratory confirmed COVID-19 cases in educational age cohorts corresponding to university/college year groups

Weekly number of new laboratory confirmed COVID-19 cases by educational age cohorts and PHE region, week 35 to 45

Weekly positivity rates of confirmed COVID-19 cases in educational age cohorts presented by Year group, from nursery to Year 6, week 35 to 45

Weekly positivity rates of confirmed COVID-19 cases in educational age cohorts presented by secondary school year group (Year 7 to Year 13), week 35 to 45

Weekly positivity rates of confirmed COVID-19 cases in educational age cohorts corresponding to university/college year groups, week 35 to 45

Weekly positivity rates of confirmed COVID-19 cases, in nursery/preschool, primary school, secondary school and college/University age cohorts, week 35 to 45

Weekly rate of new COVID-19 tests performed per 100,000 population in nursery/preschool, primary school, secondary school and college/University age cohorts, week 35 to 45

Primary care surveillance

Overall SARS-CoV-2 positivity (%) (weekly) by PHE Region, England (RCGP)

For the most recent week, more samples are expected to be tested therefore the graph should be interpreted with caution.

Positivity (%) is not calculated when the total number tested is less than 10

Overall SARS-CoV-2 positivity (%) (weekly) by age group, England (RCGP)

For the most recent week, more samples are expected to be tested therefore the graph should be interpreted with caution.

Positivity (%) is not calculated when the total number tested is less than 10

Public Health
England

Secondary Care surveillance

Weekly overall hospital and ICU/HDU admission rates per 100,000 of new COVID-19 positive cases reported through SARI Watch, England since week 12

Weekly admission rates for hospital and ICU/HDU laboratory confirmed COVID-19 cases reported through SARI Watch, week 45

Age/sex pyramid of new (a) hospital (lower level of care) (n=20,931) and (b) ICU/HDU (n=8,970) COVID-19 cases reported through SARI Watch, England

(a)

(b)

■ Male ■ Female

■ Male ■ Female

This figure is based on individual patient level data which are provided to SARI Watch from a subset of NHS Acute Trusts, therefore the data should be interpreted with caution as the distribution of age, sex and ethnic group may not be representative of all hospitalised patients.

Ethnic group of new hospitalisations (lower level of care) (n=20,132) and ICU/HDU (n=8,294) COVID-19 cases reported through SARI Watch, England

proportion of admitted cases (%)

This figure is based on individual patient level data which are provided to SARI Watch from a subset of NHS Acute Trusts, therefore the data should be interpreted with caution as the distribution of age, sex and ethnic group may not be representative of all hospitalised patients.

Weekly COVID-19 hospitalisation rate per 100,000 trust catchment population by age group and region, weeks 36-45

Public Health
England

Mortality surveillance

Number of deaths since week 10 by week of death and time since laboratory confirmation of COVID-19, England

Cumulative mortality rate of COVID-19 cases per 100,000 population tested under Pillar 1 and 2 since week 27 by (a) 28 day definition and (b) 60 day definition

(a)

(b)

From this report onwards, rates have been calculated using mid-2019 ONS population estimates

Age/sex pyramid of laboratory confirmed COVID-19 cases, cumulative data up to 13th October 2020

Median age at death (28 day): 82 years

Median age at death (60 days) 82 years
