Year: 2020 Week: 51

Summary.

[Subscribe to the weekly syndromic surveillance email](#)

Reporting week: 14 December to 20 December 2020.

During week 51 potential covid-19 indicators increased across several systems, particularly in London and South East PHE Centres.

Note: during the COVID-19 pandemic, patients with COVID-19 symptoms are generally advised to initially access a COVID-19 test through the national COVID-19 testing programme. This is likely to result in lower numbers of patients accessing health advice as monitored through syndromic surveillance systems. Syndromic data should therefore be interpreted with some caution and in the context of other COVID-19 monitoring data sources.

Remote Health Advice:

NHS 111 'potential COVID-19' calls and online assessments increased during week 51, notably in London (figures 8 & 8b, 17 & 17b). Calls and online assessments for 'loss of taste or smell' were increased (figure 5 & 15). Online assessments for cold/flu increased in week 51 (figure 12).

[Access bulletin](#)

GP In Hours:

During week 51 COVID-19-like consultations increased slightly. Other respiratory indicators remained stable, including influenza-like illness (figure 3).

[Access bulletin](#)

GP Out of Hours:

During week 51, GP out of hours contacts for respiratory indicators, including influenza-like illness, remained below seasonally expected levels (figures 2-6).

[Access bulletin](#)

Emergency Department:

Emergency department COVID-19-like attendances increased during week 51, most notably in adults 45-64 years and in London and South East PHE Centres (figure 3, 3a & 3b).

[Access bulletin](#)

Ambulance:

COVID-19-like ambulance calls increased during week 51 (figure 2). Ambulance calls for breathing problems calls remained stable (figure 3).

22 December 2020

- Key messages are provided from each individual system.
- The different PHE syndromic surveillance systems access data from different areas of the national health care system.
- Each syndromic surveillance system is able to monitor a different selection of syndromic indicators based upon a different case mix of patients.
- Access to the full version of each syndromic surveillance bulletin is available through the PHE Syndromic Surveillance website found at: (<https://www.gov.uk/government/collections/syndromic-surveillance-systems-and-analyses>); reports are made available on Thursday afternoons.

Remote Health Advice Syndromic Surveillance System:

A remote health advice syndromic surveillance system that monitors syndromic calls from remote health advice services e.g. NHS 111 each day across England.

GP In-Hours Syndromic Surveillance System:

A large general practitioner surveillance system monitoring daily consultations for a range of clinical syndromic indicators across England.

GP Out-of-Hours Syndromic Surveillance System (GPOOHS):

A syndromic surveillance system monitoring daily GP out-of hours activity and unscheduled care across England using a range of clinical syndromic indicators.

Emergency Department Syndromic Surveillance System (EDSSS):

A national ED network across England monitoring daily attendances and presenting symptoms/diagnoses.

National Ambulance Syndromic Surveillance System (NASSS):

The national ambulance syndromic surveillance system (NASSS) monitors daily calls made by persons to an ambulance trust. All 10 ambulance trusts in England provide data.

We thank and acknowledge the contribution of all data providers including:

- NHS 111 and NHS Digital.
 - QSurveillance®; University of Oxford; EMIS/EMIS practices; ClinRisk®.
 - TPP, ResearchOne and participating SystemOne GP practices.
 - Advanced Health & Care and the participating OOH service providers.
 - Participating EDSSS emergency departments.
 - Royal College of Emergency Medicine.
 - North East, North West, Yorkshire, East Midlands, West Midlands, East of England, London, South East Coast, South Central, and South Western NHS Ambulance Trusts and The Association of Ambulance Chief Executives.
-

PHE Real-time Syndromic Surveillance Team.
