

Coronavirus and the social impacts on Great Britain

Opinions and Lifestyle Survey, Great Britain
22 December to 3 January 2021

89%

of adults reported
avoiding physical
contact when
outside their home

97%

of adults reported
wearing face
coverings when
outside their
homes

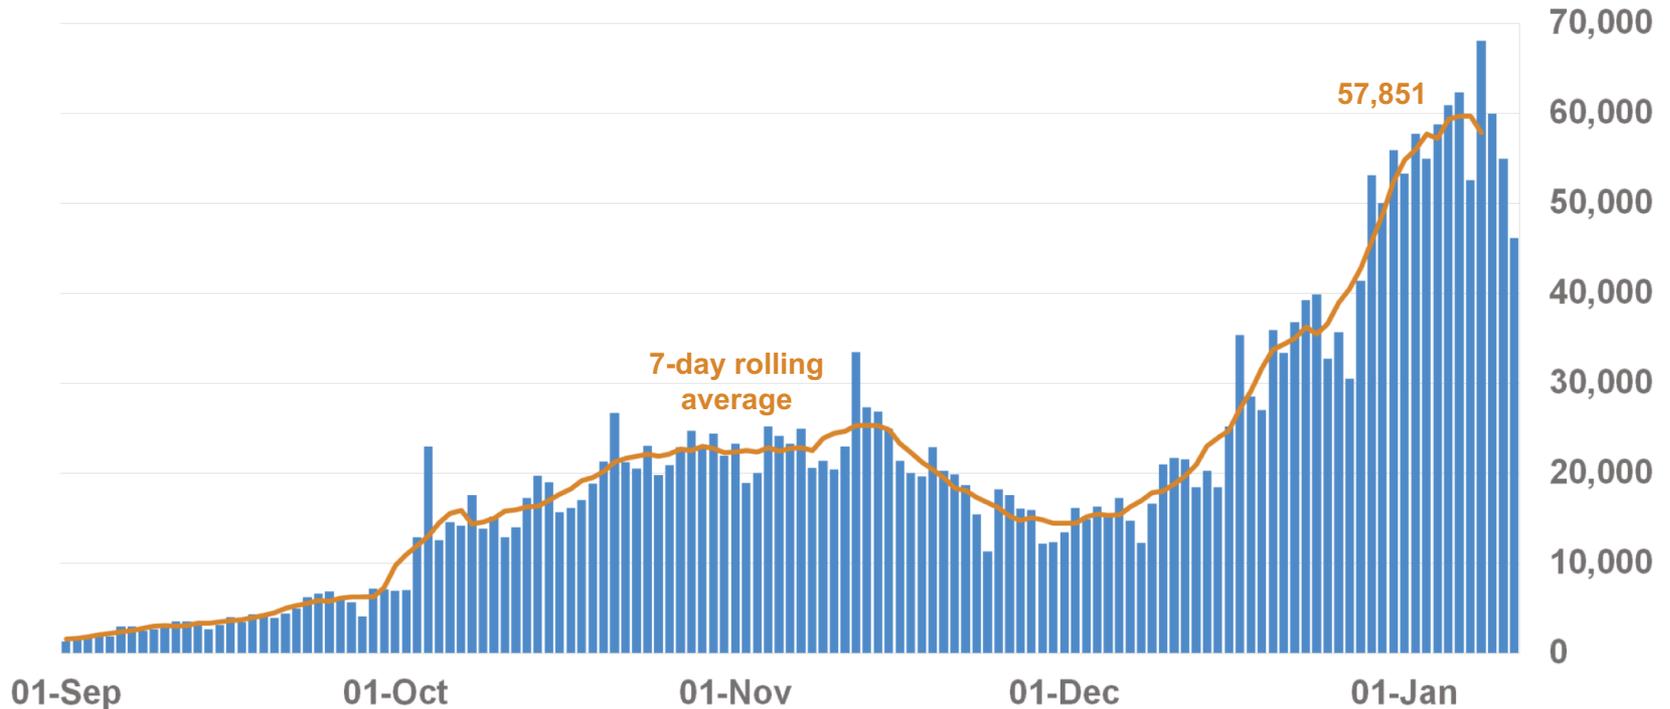

90%

reported washing
their hands with
soap and water
straight after
returning from a
public place

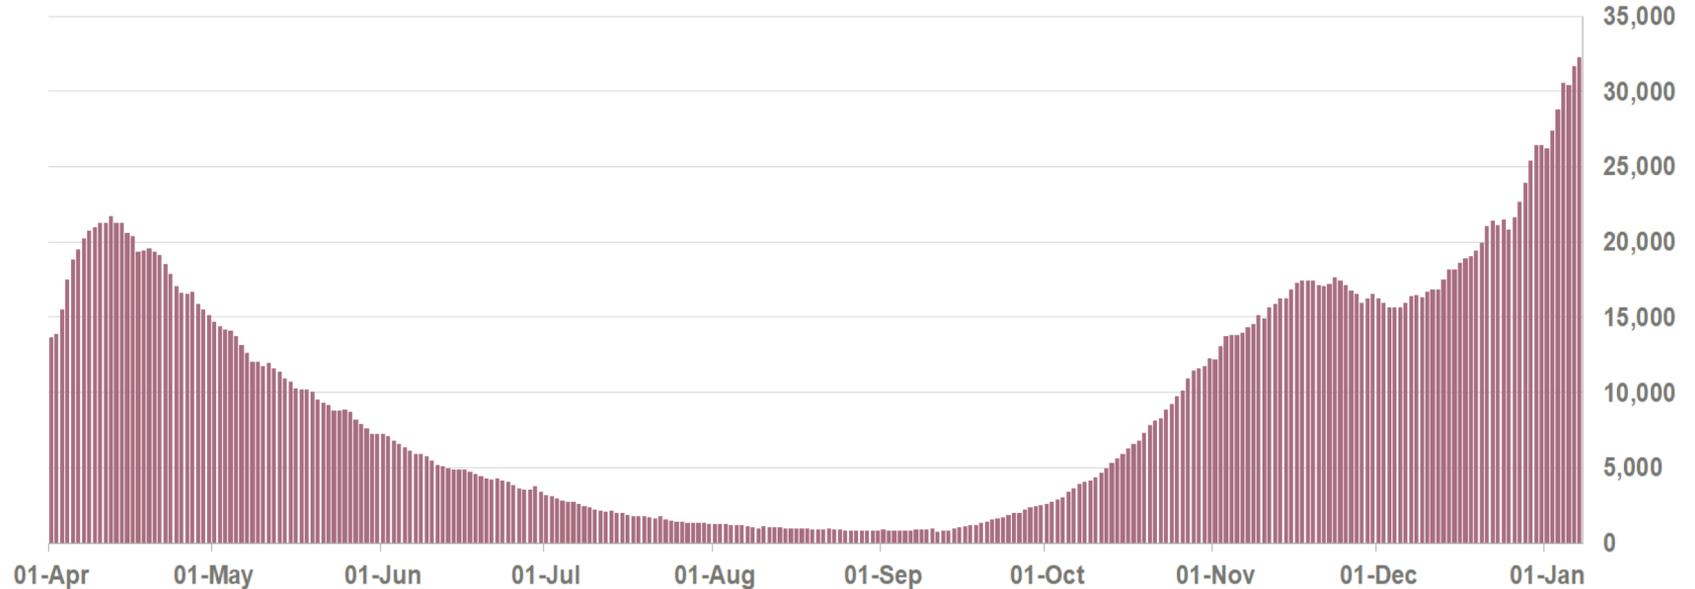

The number of people testing positive for COVID-19 in the UK is still high

Number of cases each day, by date reported, up to 11 Jan

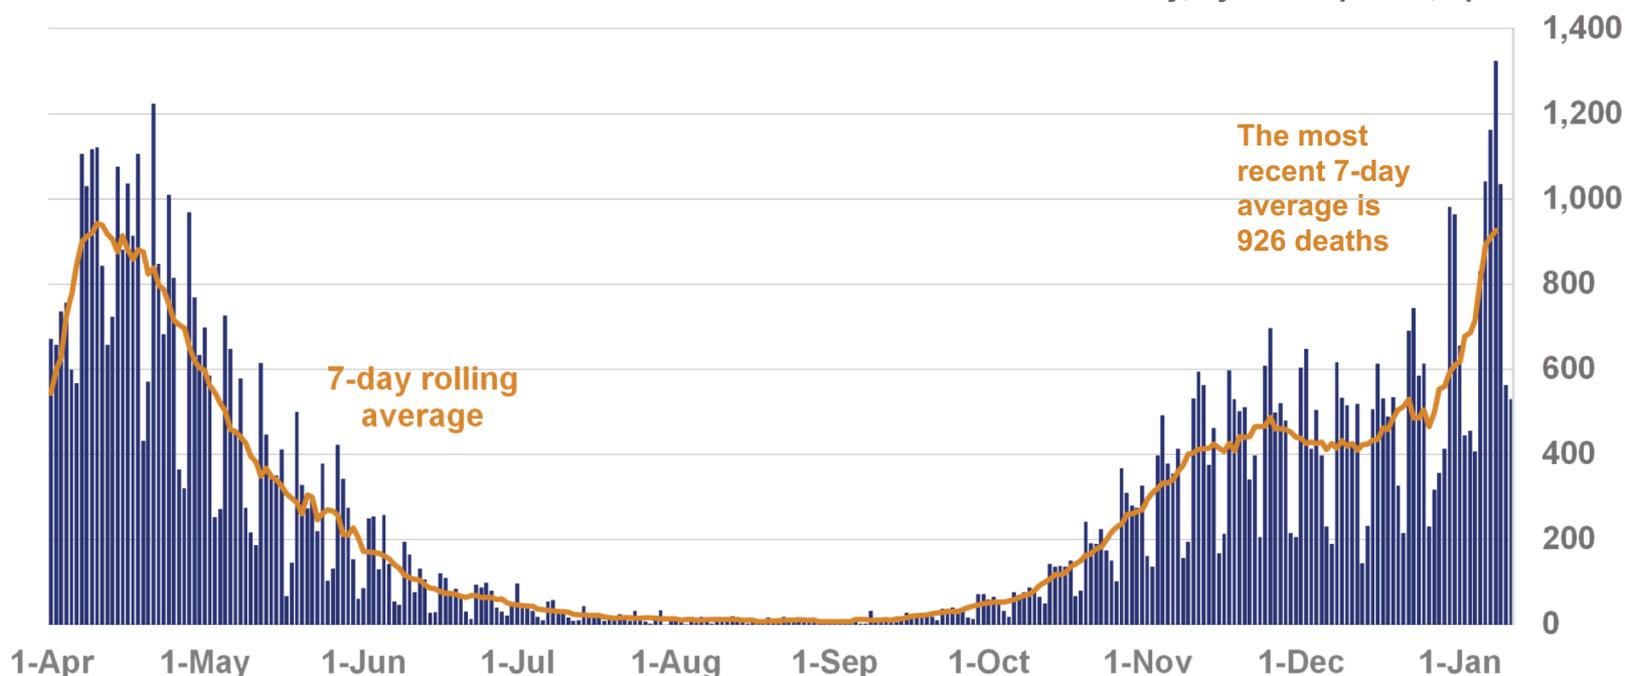

The number of people in hospital with COVID-19 in the UK is higher than ever

Number of people in hospital each day, up to 7 Jan

The number of deaths of people who had a positive test result for COVID-19 in the UK is increasing

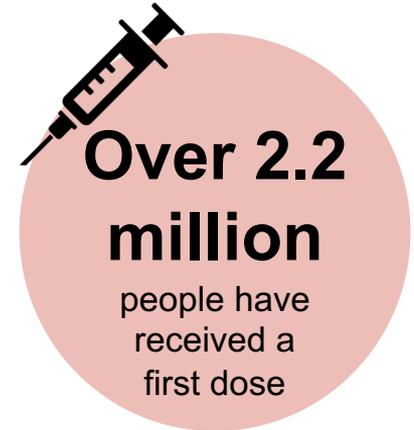

Number of deaths each day, by date reported, up to 11 Jan

Total number of people who have received a COVID-19 vaccination, UK

	First dose	Second dose
England	1,959,151	374,613
Wales	86,039	79
Scotland	163,377	*36
Northern Ireland	78,005	13,949

*Second dose data for Scotland up to 3 January only.

Statistical notes

Opinions and Lifestyle Survey, Great Britain:

The Opinions and Lifestyle Survey is a monthly omnibus survey. In response to the COVID-19 pandemic, the survey has been adapted to become a weekly survey used to collect data on the impact of the coronavirus on day-to-day life in Great Britain. In this survey, 6,030 individuals were sampled, with a response rate of 62% (or 3,756 individuals) for the survey conducted from 22 December 2020 to 3 January 2021. Questions refer to the 7 days previous to interview. Data are collected using an online self-completion questionnaire. Individuals who did not want to or were unable to complete the survey online had the opportunity to take part over the phone. Some data are based on responses before lockdown restrictions were announced in England and Scotland. Estimates are based on responses over the period 22 December 2020 to 3 January 2021 where restrictions were different in each of the UK countries.

Number of daily cases, UK:

Number of individuals who have had at least one positive COVID-19 test result (either lab-reported or lateral flow device), by date reported (the date the case was first included in the published totals). COVID-19 cases are identified by taking specimens from people and testing them for the presence of the SARS-CoV-2 virus. If the test is positive, this is referred to as a case. If a person has had more than one positive test they are only counted as one case. Cases data includes all positive virus test results, even if they are not confirmed by a lab. For example, positive test results from swab tests performed using a lateral flow device, which do not need to go to a lab, contribute towards the cases total.

Patients in hospital with COVID-19, UK:

Total number of people in hospital with COVID-19 in the UK. Definitions are not always consistent between the four nations. England data now covers all Acute Trusts, Mental Health Trusts and the Independent Sector and are reported daily by trusts to NHS England and NHS Improvement. Welsh data include confirmed COVID-19 patients in acute hospitals only, including those recovering.

COVID-19 daily deaths within 28 days of a positive test, UK:

Number of deaths of people who had a positive test result for COVID-19 and died within 28 days of the first positive test. Data from the four nations are not directly comparable as methodologies and inclusion criteria vary. The 7-day rolling mean average of daily deaths is plotted on the chart on the middle day of each seven day period. Data presented is by date reported rather than date of death or registered.

Statistical notes

Number of people who have received a vaccination, UK:

England:

Data presented in these statistics are for vaccinations administered in Hospital Hubs and Local Vaccination Service sites (e.g. GP practices). This data is as reported from the National Immunisation Management Service (NIMS), and is classified as management information. NIMS is the System of Record for the NHS COVID-19 vaccination programme in England. This data is provisional, showing the total first and second doses given as reported by midnight on 10 January. The [weekly statistics release](#) provides more accurate and detailed data by dose and age.

Wales:

Vaccinations that were carried out in Wales are reported in the Welsh Immunisation System. Figures represent a cumulative daily snapshot in vaccinations given since 8 December and recorded electronically as at 10pm on 10 January. Date entry at time of reporting will be incomplete and the number of people vaccinated will be higher.

Scotland:

Figures represent the number of people who received the first dose of the Covid vaccination in the period from 8 December up to 8:30am on Monday 11 January. This is based on management information and is subject to change on any given day.

Northern Ireland:

Figures represent the number of people who have received a COVID-19 vaccination since 8 December.
