

Adjusting the RWCS to account for excess COVID-19 deaths and excess non-COVID-19 deaths

Office for National Statistics and Department of Health and Social Care, August 2020

To be used alongside "Estimating additional deaths to expand the RWCS" Word document by ONS and DHSC, August 2020

This workbook uses adjustments outlined in the above document to account for two types of excess deaths in SPI-M's Reasonable Worst Case Scenario (RWCS). SPI-M present all COVID-19 deaths, but some of these will have been expected to occur otherwise during the same period due to other causes. SPI-M do not present non-COVID-19 deaths, which ONS death registration data have shown increase alongside COVID-19 deaths.

This workbook's adjustments reduce the SPI-M deaths to exclude deaths expected to occur in the period, and increases them to include non-COVID-19 deaths.

Trends in excess deaths are sufficiently different for each devolved administration that Scotland and Northern Ireland, and subsequently UK, adjustments and results are not presented.

Worksheet

Worksheet	Contents
Notes	Outlines purpose and contents
Adjustments	Provides the uplifts and reductions to be applied to each region or age breakdown Data for the RWCS for England and Wales with adjustments presented alongside. ONS and DHSC do not recommend combining age and regional adjustments due to the uncertainty in those smaller estimates.
RWCS	Adjusted weekly deaths for each region, not split by ageband. ONS and DHSC recommend using these adjustments over those in the RWCS worksheet, but these sub-national splits also lead to increased uncertainty in estimates.
Summary_Region	Adjusted weekly deaths for each region, not split by ageband. ONS and DHSC recommend using these adjustments over those in the RWCS worksheet, but these sub-national splits also lead to increased uncertainty in estimates.
Summary_Age	Adjusted weekly deaths for each region, not split by ageband. ONS and DHSC recommend using these adjustments over those in the RWCS worksheet, but these sub-national splits also lead to increased uncertainty in estimates.

RWCS numbers of deaths

SOURCE RWCS August 2020

Proportion of COVID-19 deaths which are excess deaths (would not occur otherwise within first 16 weeks of RWCS)

SOURCE ONS simulation modelling of population survival with and without COVID-19, using RWCS death totals and infection rates

Age Proportion of deaths which are expected within reference period

ALL	0.930

Non-COVID-19 excess deaths by region (all ages)

SOURCE ONS weekly death registration data: registrations of non-COVID-19 deaths subtracted from five-year average 2015-2019, which would be 'expected' number of deaths without the presence of COVID-19. The value presented is a proportional uplift to the number of COVID-19 deaths. This is the average of weekly non-COVID-19 excess deaths Weeks 14 to 20, divided by COVID-19 deaths in the same period. This period is when numbers of non-COVID-19 deaths presented the most significant increase on the five-year average.

Region	Additional deaths
