

Age, sex and status at 28 days for hospital in patients with proven SARS-CoV-2 infection.

Ewen Harrison, Annemarie Docherty, Calum Semple, ISARIC4/ CO-CIN

Age, sex and status at 28 days for hospital in patients with proven SARS-CoV-2 infection are presented in Figure 1 and Table 1.

The Figure is dynamic and for the period 1st August 2020 to 04:30 am 25th January 2021. This is not cleaned data.

The Table is 1st August 2020 to 14th January 2020, and is cleaned data, but not source verified.

As none of the data is source verified where small numbers of outcomes are reported (such as death in children) these data should not be relied upon.

For noting

1. 30% of admissions were in people under 60y old.
2. 30% of deaths were in people under 75y old.
