# Weekly case rates by area (24 February vs 17 February comparison)

- The chart shows weekly case rates by area as at 24 February.
- The vertical axis plots the most recent weekly case rate per 100k people (up to the 24 February) and the horizontal axis plots the equivalent case rate from the week before. Bubbles above the black dashed line represent areas where weekly case rates increased from one week to another.
- The size of each bubble is proportional to the most recent case rate per 100k people in those aged over 60 years.
- The colour of each bubble indicates which region the area is in.

Sources: Data from Public Health England, Outbreak Surveillance Team. Weekly case rate is defined as the number of cases per 100,000 reported in the seven day period preceding the stated date. Some names have been shortened for legibility.
