<i>The document did not discuss low carb diets in the context of SGLT2i treatment for T2D</i>	<i>There are multiple case reports where a low carb or ketogenic diet has been a trigger for SGLT2i associated diabetic ketoacidosis. After reviewing such data , perhaps it would be wise to suggest great caution or even avoidance of low carb diets in patients treated with SGLT2i. This is an overlooked issue in clinical practice, and with the rising use of both low carb diets and SGLT2i in clinical practice, a very important issue that perhaps should be discussed in the document.</i>
