Dear Sir / Madam

**THE OFFSHORE OIL AND GAS EXPLORATION, PRODUCTION, UNLOADING
AND STORAGE (ENVIRONMENTAL IMPACT ASSESSMENT) REGULATIONS
2020
CLAIR-RIDGE [Part of CLAIR], Clair Ridge Platform, DRILLING PRODUCER
WELL 206/08a-BS2BU3P7**

I refer to your amended application dated 11th June 2021, reference DR/2090/1 (Version 1).

It has been determined that the proposed changes to the project is not likely to result in a significant effect on the environment, and therefore an environmental impact assessment is not required.

A screening direction is therefore issued for the changes to the project. An amended schedule of conditions, comments, and main reasons for the decision on the amended application, are attached. A copy of this screening direction will be forwarded to the application consultees, the Oil and Gas Authority and published on the gov.uk website.

If you have any queries in relation to this screening direction or the attachments, please do not hesitate to contact [REDACTED] on [REDACTED] or email the Environmental Management Team at bst@beis.gov.uk.

Yours faithfully

**THE OFFSHORE OIL AND GAS EXPLORATION, PRODUCTION, UNLOADING
AND STORAGE (ENVIRONMENTAL IMPACT ASSESSMENT) REGULATIONS
2020**

**SCREENING DIRECTION CONFIRMING THAT AN ENVIRONMENTAL IMPACT
ASSESSMENT IS NOT REQUIRED**

**CLAIR-RIDGE [Part of CLAIR], Clair Ridge Platform, DRILLING PRODUCER
WELL 206/08a-BS2BU3P7**

DR/2090/1 (Version 1)

Whereas BP EXPLORATION OPERATING COMPANY LIMITED has made an application dated 11th June 2021, under The Offshore Oil and Gas Exploration, Production, Unloading and Storage (Environmental Impact Assessment) Regulations 2020, and whereas the Secretary of State has considered the application and is satisfied that the project is not likely to have a significant effect on the environment; in exercise of the powers available under regulation 6, the Secretary of State hereby directs that the application for consent in respect of the project need not be accompanied by an Environmental Impact Assessment, provided that the project is carried out as described in the application for the screening direction and in accordance with the conditions specified in the attached schedule.

In giving a screening direction under regulation 6 of the above Regulations, the Secretary of State accordingly gives his agreement to the Oil and Gas Authority to the grant of consent for the project as detailed in the application.

Effective Date: 14th June 2021

THE OFFSHORE OIL AND GAS EXPLORATION, PRODUCTION, UNLOADING AND STORAGE (ENVIRONMENTAL IMPACT ASSESSMENT) REGULATIONS 2020

SCHEDULE OF SCREENING DIRECTION CONDITIONS

The grant of this screening direction is conditional upon the screening direction holder complying with the following conditions.

1 Screening direction validity

The screening direction shall be valid from 23 April 2021 until 31 August 2021.

2 Commencement and completion of the project

The holder of the screening direction must notify the Department for Business, Energy & Industrial Strategy (hereinafter called the 'Department') of commencement and completion of the project within two days:

- a) of commencement of the project and
- b) of completion of the project.

Notification should be sent by email to the Environmental Management Team Mailbox: bst@beis.gov.uk

3 Prevention of pollution

The holder of the screening direction must ensure that appropriate measures are taken to minimise discharges, emissions and waste, in particular through the appropriate use of technology; and to ensure that necessary measures are taken to prevent incidents affecting the environment or, where they occur, to limit their consequences in relation to the environment.

4 Inspections

Should the Department consider it necessary or expedient for an inspector appointed by the Secretary of State to investigate whether the conditions of the screening direction are being complied with, the holder of the screening direction shall afford the inspector with such facilities and assistance as the inspector considers necessary to exercise the powers conferred by the regulations. The holder of the screening direction shall additionally ensure that copies (electronic or paper) of the screening direction and any other relevant documents are available for inspection by the inspector at:

- a) the premises of the holder of the screening direction; and
- b) the facilities undertaking the project covered by the screening direction.

5 Check monitoring

Should the Department consider it necessary or expedient to undertake an independent monitoring programme to assess the impact of the project covered by the screening direction, the screening direction holder shall afford the Department with such facilities and assistance as the Department considers necessary to undertake the work.

6 Atmospheric emissions returns

Following completion of the project covered by the screening direction, the holder of the screening direction shall report all relevant atmospheric emissions, such as combustion emissions, extended well test emissions or flaring and venting emissions relating to a well test, using the appropriate Environmental Emissions Monitoring System (EEMS) reporting forms. In the case of atmospheric emissions relating to drilling projects undertaken from a fixed installation, they should be included in the annual EEMS reporting forms for the fixed installation.

7 Unauthorised deposits

Following completion of the project covered by the screening direction, the holder of the screening direction shall recover any materials accidentally or temporarily deposited on the seabed, such as debris, temporary containers, structures or deposits, or scientific instruments, and shall return the materials to land. If it is not possible to recover any of these deposits, full details of the materials remaining on the seabed must be reported to the Department in accordance with the requirements of Petroleum Operations Notice No.2 (PON2).

8 Screening direction variation

In the event that the holder of the screening direction proposes changes to any of the particulars detailed in the application for a screening direction, the holder must notify the Department immediately and submit an application for a post screening direction amendment. The post screening direction must be in place prior to the amended proposals taking effect.

COMMENTS ON THE APPLICATION FOR SCREENING DIRECTION

Section 1

The attention of screening direction holders is drawn to the following provisions regarding The Offshore Oil and Gas Exploration, Production, Unloading and Storage (Environmental Impact Assessment) Regulations 2020.

1) You are deemed to have satisfied yourself that there are no barriers, legal or otherwise, to the carrying out of the project covered by the screening direction. The issue of a screening direction does not absolve the screening direction holder from obtaining such authorisations, consents etc that may be required under any other legislation.

2) The Department would draw your attention to the following comments:

n/a

3) All communications relating to the screening direction should be addressed to:

Out-of-hours emergency screening direction variations:

Telephone Met Office out-of-hours service (0330 135 0010) and ask to be connected to the Department's On-call Response Officer (Offshore Environmental Inspectorate).

Routine communications

SCHEDULE OF SCREENING DIRECTION DECISION REASONS

The Secretary of State has decided that, based on the information provided, the project is not likely to have a significant effect on the environment. The main reasons for this decision are:

1) Decision reasons

The following provides a summary of the assessments undertaken by OPRED to determine whether an Environmental Impact Assessment is required for this project. This document summarises the information considered, the potential impacts and sets out the main reasons for the decision made.

In considering whether an Environmental Impact Assessment is required or not, the following have been taken into account:

- a) the information provided by the developer;
- b) the matters listed in Schedule 5 of The Offshore Oil and Gas Exploration, Production, Unloading and Storage (Environmental Impact Regulations 2020) (the Regulations);
- c) the results of any preliminary verifications or assessments of the effects on the environment of the project; and
- d) any conditions that the Secretary of State may attach to the agreement to the grant of consent.

Characteristics of the Project

This post screening direction amendment (ref DR/2090/1) relates to a change to the project for which a screening direction was previously issued.

Having regard, in the particular, to the matters identified at paragraphs 1(a) to (g) of Schedule 5 to the Regulations, the characteristics of the project include the following:

Summary of the Project

- Revised section length of 12.25" well section, following a review of the drilling plan.

Description of the Project

The original screening direction (ref D/2090/0) relates to the drilling of development well 206/8a-BS2BU3P7 (B12) from the Clair Ridge Platform (CRP).

That project covered the drilling of 32" and 16" sections with Water Based Mud (WBM) and 12.25" and 8.5" sections with Low Toxicity Oil Based Mud (LTOBM). With cuttings from the WBM sections discharged at CRP, with cuttings generated from the LTOBM sections reinjected. If re-injection is unavailable, then the cuttings are to be returned to shore for treatment and disposal. On completion of the drilling operations the well will be cleaned up and displaced to brine prior to running the completions.

This post screening direction amendment (ref DR2090/1) relates to a revision of the section length of the 12.25" well section resulting in a slight increase in OBM cuttings. There is no change to the timing of the operations.

Drilling of oil producing wells was assessed in the original scope for the Clair Ridge Development Environmental Statement (ES) which was approved 27th June 2011. A total of 36 wells are planned over approximately 12 years, with BS2BU3P7 the 10th.

It is not considered to be likely that the project will be affected by natural disasters. The risk of a major accident such as a well blowout has been assessed. The Developer has control measures in place to reduce the risk of a major accident occurring and the probability of such an event occurring is very low.

Location of the Project

Having regard, in particular, to the matters identified at paragraphs 2(a) to (c) of Schedule 5 to the Regulations, the environmental sensitivity of geographical areas likely to be affected by the project has been considered as follows. The CRP is located approximately 55 kilometres (km) west of Shetland and 92 km south east of the United Kingdom-Faroes median line. The operations are part of the existing Clair Ridge development and were included in the original scope of the ES. This is the 10th well to be drilled at the development.

The project is in an area characterised by coarse sediment and sand and muddy sand with a water depth of 143 metres (m). Mean monthly significant wave heights for the area range between 3.5 m and 4.5 m in the winter months, and 1.5 m and 2 m in the summer months. Surveys indicated that areas were predominately classified as Sublittoral coarse sediment. Additional habitats were identified in a lesser extent, including Sublittoral sand and Sublittoral Mixed Sediment. Survey work found that the sediments generally support a species-rich and relatively abundant macrofauna. Highly populated with juveniles, the total proportional taxa contribution around Clair Ridge consists mainly of annelids (63.4%), arthropods (15.9%), molluscs (14.6%), echinoderms (3.7%) and other (2.4%). This dominance of annelid taxa is broadly typical of the northeast Atlantic area. There is no evidence of threatened or declining species listed under OSPAR or Priority Marine Features (PMF). No species or habitats of conservation significance under the Offshore Petroleum Activities (Conservation of Habitats) Regulations 2001 (as amended) were observed within the survey area. The closest recorded PMFs are deep-sea sponge aggregations and ocean quahogs aggregations located approximately 23 km west and 69 km east of the CRP, respectively.

Two wrecks have been identified within 7 km of the CRP. No aggregate dredging and disposal sites, sites of marine archaeological interest or planned offshore renewable energy developments have been identified within 40km of the CRP.

Given the location of the project, it is not likely that the areas identified at paragraphs 2(c)(i), (iii), (iv), (vi), (vii) of Schedule 5 to the Regulations will be affected by the project.

Type and characteristics of the potential impact

In accordance with paragraph 3 of Schedule 5 to the Regulations, the likely significant effects of the project on the environment have been considered. Potential effects on the environment from the activities associated with the project were assessed, including impacts arising from atmospheric emissions, seabed disturbance, physical presence, planned discharges and accidental spills.

Other than the matters considered further below, there is not likely to be any significant impact of the project on population and human health.

There remains a 500 m radius safety zone around the CRP, excluding unauthorised access of vessels and prohibiting access to fishing vessels. There are no additional impacts identified as part of the change to the operations at BS2BU3P7.

There will be a slight increase in the LTOBM cuttings due to the change in section length, however these and the associated chemicals will be reinjected or returned to shore for treatment and disposal, resulting in no significant impact to the offshore environment. There are no changes to the chemical quantities required.

There are no expected transboundary effects from change in operations at BS2BU3P7. The nearest boundary (UK/Faroes Median Line) is located approximately 92 km north west of the operations. It is not considered likely that any planned operational discharge (cuttings, chemicals or base oil) will be detectable at this distance from CRP.

Although not a planned activity, a worst-case major accident scenario resulting from a potential well blow-out was modelled and assessed. The probability of a large oil spill from the proposed operations is low. Therefore, it is considered that the control measures in place to prevent loss of well control minimise the risk of an oil spill which could have a significant impact and the proposed operations carried out as planned are not likely to have a significant effect on the environment.

Operations at BS2BU3P7 will use existing platform power generation. Atmospheric emissions resulting from drilling at CRP were assessed as part of the ES and are considered to have no significant impact on the environment.

Operations at BS2BU3P7 will be conducted from the existing CRP such that there is no increase in the infrastructure footprint. No cumulative impacts are expected to

occur between this project and other existing projects due to the distance between them. Impacts from the discharge of cuttings, including potential cumulative impacts from the 36 Claire Ridge wells were considered and as the drilling will occur over a 12 year period and will be dispersed over time, impacts were concluded to be localised and not significant.

Two wrecks have been identified within 7 km of the CRP, the operations at BS2BU3P7 are not likely to have a significant impact on them.

Decision

Taking the above considerations into account, the Secretary of State has concluded that the project is not likely to have a significant impact on the environment and that an environmental impact assessment is not required.
