

Learning & Development

Providing full and accessible support for science and engineering professional development.

Through this theme, we want to **increase science and engineering literacy for all** of government, including generalists and specialists both in and out of the GSE Profession.

We already signpost specialist STEM learning through the [GSE Skills Assessment Tool](#), and are excited to be offering a suite of learning for all of government called "**Science and Engineering 101**" from December 2021.

Go to the GSEP Strategy for a case study showcasing STEM Futures, a great technical placement development programme.

Publish GSE Career Framework recruitment guidance in September 2021

Launch clear routes to chartership with professional institutes in August 2021

We are also working hard to provide **closer links to professional institutions** through better signposting and by mapping GSE technical skills against competencies required for chartership.

Finally, we want to better integrate GSE technical skills into people's career journeys by providing clear recruitment guidance for teams and, later on, show how they can be used to track development. This will enable scientists and engineers to continuously progress when moving across roles and departments.
