II. Health information	II.a. Certificate reference number GBR	II.b. Import Permit number:
------------------------	---	-----------------------------

I, the undersigned official veterinarian, hereby certify that the registered horse described above meets the following requirements:

II.1 it is a registered horse in accordance with the definition provided for in Article 2(c) of Council Directive 2009/156/EC which has been temporarily, for a period of less than 90 days, admitted into the UK and/or the European Union from Canada (see CVED (insert CVED number) attached) and has been moved during this period exclusively within the UK and/or the European Union from one Member State to another in accordance with Union legislation adopted pursuant to Article 19(b) of Council Directive 2009/156/EC;

II.2. it has been inspected on (insert dd/mm/yyyy) within 72 hours prior to loading for return to Canada by a veterinarian officially recognised by the competent authority of the UK and found to be free of ectoparasites and clinical evidence of infectious or contagious diseases of Equidae and, as far as can be determined, exposure thereto;

II.3 it returns to Canada from the UK:

II.3.1 in which African horse sickness, Japanese encephalitis, Venezuelan equine encephalomyelitis, equine infectious anaemia, glanders (*Burkholderia mallei*), dourine (*Trypanosoma equiperdum*) are compulsorily notifiable diseases;

II.3.2 that is considered by the CFIA to be free of African horse sickness, Japanese encephalitis and Venezuelan equine encephalomyelitis and in which no restrictive measures are in place on these diseases by the EU or the UK, and the UK is in full compliance with all relevant EU legislation for these diseases;

II.3.3 that has been free from dourine and glanders during the 6 months immediately preceding export to Canada and in which no restrictive measures are in place on these diseases by the EU or the UK, and the UK is in full compliance with all relevant EU legislation for these diseases;

II.4 during its stay in the UK and/or European Union it has not been in any country or zone in which Venezuelan equine encephalomyelitis has occurred in the past 24 months, it has not been vaccinated against Venezuelan equine encephalomyelitis within 60 days immediately preceding its return to Canada, and the UK is in full compliance with all relevant EU legislation for this disease

II.5 during its stay in the UK and/or European Union it has not been in contact with equidae (including imported equidae) that have been in an area where restrictive measures are in place on African horse sickness or in a country or zone where African horse sickness has been diagnosed in the past 60 days, and it has not been vaccinated against African horse sickness within 60 days immediately preceding its return to Canada, and the UK is in full compliance with all relevant EU legislation for this disease;

II.6 during its stay in the UK and/or European Union it has not been on any premises subject to restrictive measures for glanders or dourine and it has not had contact with equidae (including imported horses) that have been in an area where restrictive measures are in place on dourine and glanders during the past 6 months immediately preceding its return to Canada, and the UK is in full compliance with all relevant EU legislation for these diseases;

II.7 during its stay in the UK and/or European Union it has not been on any premises where equine infectious anaemia has occurred nor has this disease occurred on any adjoining premises during 60 days immediately preceding its return to Canada;

II.8 according to the declaration by the owner or his representative responsible for the horse, during its stay in the UK and/or European Union it has not been on any premises where

11.8.1 equine piroplasmiasis (*Theileria equi* and *Babesia caballi*) is known to have occurred during 60 days immediately preceding its return to Canada, and it was maintained free from ticks, when necessary by preventive treatment during the thirty (30) days immediately preceding its return to Canada;

11.8.2 contagious equine metritis (*Taylorella equigenitalis*) is known to have occurred during the 60 days immediately preceding its return to Canada or where breeding activities were carried out, and has not been used for breeding purposes nor had its urogenital tract been catheterized or examined;

II.9 as far as can be ascertained, during its stay in the UK and/or European Union it has not come into contact with any equidae, products derived from Equidae or equipment used in contact with equidae of a lesser zoosanitary health status and arrangements are made that such contacts will be prevented during transportation to the port of exportation and loading onto the international transport carrier and the carrier has been instructed to maintain this status throughout transport to Canada;

II.10 it has been treated before and at the time of loading in accordance with the relevant provisions of Regulation (EC) No 1/2005, in particular as regards watering and feeding, and at the moment of inspection it appeared fit for the intended transport.

Notes

Part I:

Box no. Indicate the premises of export:
 I.11:

Box no. Identification system: insert "microchip" and the other recognised (e.g. FE1 passport, breed registry, etc.) means of identification (which clearly and uniquely identifies the animal, and I.25: includes verifiable visual characteristics) used. For Canadian horses returning from the UK and/or EU, the official Canadian export health certificate is an adequate second means of identification.
 Specify where the microchip is located.
 Identification number: shall correspond to the alpha-numeric code of the microchip displayed by the appropriate reading device. If there is a unique number associated with the second means of identification (e.g. passport number, Canadian export certificate number), it should be recorded on the accompanying export health certificate.
 According to the import rules of Canada, the animal must already be identified with a microchip, before export to the UK and/or EU. The number of the microchip must be recorded on the accompanying return health certificate. For the verification of the identity of the animal it is mandatory to make available at the point of entry into Canada a reading device capable of reading and displaying the alpha-numeric code inserted in Box 1.25, unless the microchip used is an ISO microchip.

Part II:

The official stamp and the signature of the official veterinarian must appear at the bottom of each page of this certificate in a colour different to that of the printing.
