## To everyone working in the technology sector

In June, the Prime Minister, Business Secretary and I formally launched the **Together For Our Planet 'Business Climate Leaders' campaign**. This encourages and supports small businesses to make a formal commitment to net zero, and reduce their carbon footprint, in the run up to the COP26 Climate Conference in Glasgow in November and beyond.

As you know, net zero by 2050 means that at that point you are putting no more carbon into the atmosphere than you are taking out of it. Small businesses from a diverse range of industries have come forward to make their net zero commitment, and thousands have visited the [UK Business Climate Hub](#) to make their climate commitment and get advice on going green.

As recognised by the industry-led [Tech Zero Taskforce](#), the technology sector is a key part of our economy and has an important role to play in making a net zero commitment. Working with us, you have been inspiring technology businesses to take action, and I am keen this continue. With fewer than 100 days to go until COP26, this can include encouraging more businesses in industries like yours to sign up to our campaign. Making greener choices now can mean savings on running costs, and also show customers the technology sector continues to be serious about sustainability.

To help businesses to do that the Government, working with industry experts, have developed new advice bespoke to the technology sector, to help you as you continue supporting your members to play their vital role in cutting the UK's carbon emissions.

From buying energy efficient equipment to sourcing large cloud providers, this important advice outlines the small steps technology businesses can take that will collectively make a big difference in helping us fight climate change and create a brighter and more sustainable future. The guidance is available on the UK Business Climate Hub:

[https://smeclimatehub.org/uk/#steps\\_to\\_take](https://smeclimatehub.org/uk/#steps_to_take)

Businesses can also take the first step on their journey to a low carbon future today, by committing to cutting your carbon emissions in half by 2030 and to reach 'net zero' by 2050, when you visit the [UK Business Climate Hub](#).

By making this pledge, they will be joining an international community of thousands of like-minded businesses, and will be recognised by the United Nations Race to Zero campaign as one of thousands of 'climate leaders' across the country – companies that are acting as role models and inspiring others in the community to find meaningful ways to take positive environmental action. As part of this, they will get regular newsletters and information from government to support them through their net zero journey.

The technology sector is already leading the way in our efforts to save the planet, including 100 of the UK's leading tech companies uniting in their commitment to net zero by signing up to the [Tech Zero Taskforce](#). Actions like this being taken by the sector will generate new jobs

and economic opportunities in all parts of the UK. For the vital part of Tech UK and Tech Nation, and the technology sector in this endeavour, I would say thank you.

Kind regards,
