# The effect of social distancing on the reproduction number and number of contacts in the UK from a social contact survey <br> Report 8 

Authors: Amy Gimma, Christopher Jarvis, Kevin Van Zandvoort, Petra Klepac, and John Edmunds on behalf of the LSHTM COVID-19 Modelling Team

Date: 25th May 2020

## Results

We estimate $R_{0}$ to be 0.66 ( $95 \% \mathrm{CI} 0.36$ to 1.06) for the UK, 0.61 ( $95 \% \mathrm{Cl} 0.34$ to 1.01) for England, between the $14^{\text {th }}$ May and $21^{\text {st }}$ May. Prior to the 11th of May we estimated $R_{0}$ to be below one in the UK (Table 1). The interquartile range remains 1 to 3 for the number of contacts per person. The mean contacts are 2.88 in England and 3.29 in the rest of the UK, this distribution is skewed and affected by outliers, which likely shifts the central estimate of $R_{0}$ There were three participants reporting greater than 100 contacts, they worked in sales and services and reported 108,382, and 502 contacts at work. Table 2 summarises mean contacts outside of the house by age, gender, self reported health risk group, high-contact occupations, and social group.

Table 1. Numbers of participants, reported contacts and reproduction numbers. Numbers of participants in each panel, their average number of contacts reported and the estimate of the reproduction number, $R_{0}$.

| Group | Week | Panel | Dates | Observations | Contacts | Mean (IQR) | HHsize | $\mathrm{R}_{0}$ mean (95\% CI) |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| UK | 1,2 | A \& B | 24/03 to 10/04 | 3,376 | 8,943 | 2.64 (1 to 3) | 2.72 | 0.53 (0.33 to 0.75) |
| UK | 8 | B | 14/05 to 21/05 | 1,146 | 3,775 | 3.29 (1 to 3) | 2.43 | 0.66 (0.36 to 1.06) |
| UK <br> (< 100 contacts) | 8 | B | 14/05 to 21/05 | 1,143 | 2,771 | 2.42 (1 to 3) | 2.42 | 0.49 (0.29 to 0.72) |
| England | 8 | B | 14/05 to 21/05 | 969 | 2,794 | 2.88 (1 to 3) | 2.46 | 0.61 (0.34 to 1.01) |
| England (< 100 contacts) | 8 | B | 14/05 to 21/05 | 967 | 2,295 | 2.42 (1 to 3) | 2.46 | 0.48 (0.29 to 0.71) |

Table 2. Summary of contacts outside the home by participant age group, gender, self-reported health risk level, high-contact occupation, and social group. Reported for all participants and filtered for participants reporting less than 100 contacts.

| Category | Values | Subset | Observations | Mean | SD | Skew | IQR | Min to Max |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Age group | 18-29 | All | 132 | 0.83 | 1.71 | 3 | 0 to 1 | 0 to 11 |
|  |  | < 100 contacts | 132 | 0.83 | 1.71 | 3 | 0 to 1 | 0 to 11 |
|  | 30-39 | All | 130 | 1.97 | 10.35 | 8.82 | 0 to 0.75 | 0 to 108 |
|  |  | < 100 contacts | 129 | 1.15 | 4.4 | 7.64 | 0 to 0 | 0 to 44 |
|  | 40-49 | All | 214 | 3.49 | 27.09 | 13.33 | 0 to 1 | 0 to 387 |
|  |  | < 100 contacts | 213 | 1.69 | 6.34 | 6.44 | 0 to 1 | 0 to 60 |
|  | 50-59 | All | 249 | 2.97 | 32.09 | 15.38 | 0 to 1 | 0 to 505 |
|  |  | < 100 contacts | 248 | 0.95 | 3.08 | 8.11 | 0 to 1 | 0 to 38 |
|  | 60-69 | All | 204 | 0.97 | 2.14 | 5.03 | 0 to 1 | 0 to 20 |
|  |  | < 100 contacts | 204 | 0.97 | 2.14 | 5.03 | 0 to 1 | 0 to 20 |

|  |  | < 100 contacts | 16 | 1.25 | 2.24 | 1.92 | 0 to 1.25 | 0 to 8 |
|  | Sales and services elementary occupations | All | 49 | 19.55 | 89.8 | 4.61 | 0 to 1 | 0 to 505 |
|  |  | < 100 contacts | 47 | 1.4 | 4.44 | 4.5 | 0 to 1 | 0 to 27 |
|  | Social work associate professionals | All | 17 | 1.53 | 1.84 | 1.12 | 0 to 3 | 0 to 6 |
|  |  | < 100 contacts | 17 | 1.53 | 1.84 | 1.12 | 0 to 3 | 0 to 6 |
|  | Teaching associate professionals | All | 23 | 3.04 | 12.44 | 4.16 | 0 to 1 | 0 to 60 |
|  |  | < 100 contacts | 23 | 3.04 | 12.44 | 4.16 | 0 to 1 | 0 to 60 |
| Social Group | A - Upper middle class | All | 59 | 0.53 | 1.28 | 2.38 | 0 to 0 | 0 to 5 |
|  |  | < 100 contacts | 59 | 0.53 | 1.28 | 2.38 | 0 to 0 | 0 to 5 |
|  | B - Middle class | All | 274 | 2.26 | 23.41 | 16.2 | 0 to 1 | 0 to 387 |
|  |  | < 100 contacts | 273 | 0.85 | 2 | 4.04 | 0 to 1 | 0 to 15 |
|  | C1 - Lower middle class | All | 344 | 1.46 | 7.64 | 10.41 | 0 to 1 | 0 to 108 |
|  |  | < 100 contacts | 343 | 1.15 | 5.02 | 9.06 | 0 to 1 | 0 to 60 |
|  | C2-Skilled working class | All | 216 | 1 | 2.97 | 6.18 | 0 to 1 | 0 to 29 |
|  |  | < 100 contacts | 216 | 1 | 2.97 | 6.18 | 0 to 1 | 0 to 29 |
|  | D - Working class | All | 167 | 4.5 | 39.21 | 12.46 | 0 to 1 | 0 to 505 |
|  |  | < 100 contacts | 166 | 1.49 | 4.38 | 5.55 | 0 to 1 | 0 to 38 |
|  | E-Lower level of subsistence | All | 86 | 0.55 | 1.58 | 4.53 | 0 to 0 | 0 to 11 |
|  |  | < 100 contacts | 86 | 0.55 | 1.58 | 4.53 | 0 to 0 | 0 to 11 |

## Methods

CoMix is a behavioural survey, with a study sample recruited to be broadly representative of the UK adult population. It was launched on $24^{\text {th }}$ of March 2020 and this analysis includes data
collected up to the $21^{\text {st }}$ of May. Data is collected weekly, using two different panels each for adults and children who are interviewed using the same questionnaire in alternate weeks. The questionnaires for children are completed by a parent within their household as a proxy. Participants recorded direct, face-to-face contacts made on the previous day, specifying certain characteristics for each contact including the age and sex of the contact, whether contact was physical (skin-to-skin contact), and where contact occurred (e.g. at home, work, while undertaking leisure activities, etc). Further details have been published elsewhere ${ }^{1}$. The contact survey is based on the POLYMOD contact survey, which is used as a baseline for social mixing in the UK under normal conditions ${ }^{2}$. The panels started with a sample size of 1,816 in Panel A, 1,560 in Panel B, 564 in Panel C, and 228 in the interim with a final target of around 500 in Panel D. Final data for Panel B Wave 4 (week 8 of the study) has 1,146 participants.

We calculated the average number of contacts in the settings home, work, school, and other. We sample uniformly between the minimum and maximum age reported for the contact, as we do not record exact ages for contacts. We use the reciprocity of contacts to impute child-adult contacts from adult-child contacts. We set the age bands for under 18 s to 0-4, 5-12, 13-17 to be consistent with the BBC Pandemic study. When excluding children's survey data, we impute child-child contacts using the POLYMOD UK data, setting school-contacts to 0 and adjusting contact in other settings (e.g. home) as observed for adults, and we impute child-adult contacts by reciprocating adult-child reported contacts. ${ }^{1,3}$ We take the mean of reciprocated contacts to form symmetric matrices.

We assume that $R_{0}$ prior to physical distancing measures were in place follows a normal distribution with a mean of 2.6 and sd of 0.54 . We then apply a scaling factor of the ratio of dominant eigenvalues between CoMix and Polymod contact matrices to estimate $R_{0}$ under the observed contacts patterns in our study following the approach found in Wallinga et al. ${ }^{4}$. This assumes that all other elements of the Next Generation Matrix remain constant, such as transmissibility by age group, which may not be the case.

Uncertainty in the estimates of reduction in $R_{0}$ is obtained using 2,000 bootstrap samples of the CoMix and POLYMOD contacts matrices, and applying these ratios to 2,000 sampled values of $R_{0}$.
