

CORONAVIRUS **SITUATIONAL** **AWARENESS** Summary

date: 21 October 2020

Contents

This situational awareness summary report collates information and intelligence from various sources. The summary will be provided daily and the content will continue to be developed.

- National context
- High level summary
- Case rates, symptomatic cases, positivity and testing

Please note: PHE has adjusted its approach to test positivity and testing rate metrics. Previously, any repeat tests for individuals since pandemic onset had been deduplicated. As the likelihood of individuals being tested multiple times has increased over time, test positivity and testing rate data are now deduplicated within each 7-day window. This change has been made in all OST outputs as of **20/10/2020** and applied retrospectively.

Please note: As of 13/10/2020, denominator data for case and testing rates have been updated to 2019 mid-year population estimates.

- [REDACTED]
- [REDACTED]
- Prevalence
- Hospitalisation
- [REDACTED]
- NHS 111 potential COVID-19
- Outbreak reports
 - Overall by geography
 - Care homes
 - Education
 - [REDACTED]
 - Other settings
- Contact tracing
- Enhanced contact tracing
- Weekly positivity for other respiratory viruses

A separate Appendix contains Local Authority maps for case rates, positivity, testing, mortality and contact tracing.

National context

England confirmed cases - epidemic curve*

Previous two months by day

*Bars shaded in light red and light green are provisional. Figures are expected to rise as results are received for additional samples tested during this period. Inset epi curve is based on weekly reports from date of first case diagnosed. Main epi curve shows daily cases truncated to show the previous two months. Value labels are for combined pillar 1 and pillar 2 cases.

Produced by the Outbreak Surveillance Team, Public Health England.

High level summary 1 – PHE Centres

PHE Centres with highest case rates in 7 days (10 October 2020 to 16 October 2020)

	Individuals tested per day per 100,000 population (7 day moving average)		Percentage individuals test positive (weekly)	Number of LTLAs by RAG status of percentage of individuals test positive (weekly)			Percentage individual cases reporting symptoms (weekly, Pillar 2 only)	Case rate per 100,000 population (weekly)	Number of LTLAs by RAG status of case rate per 100,000 population (weekly)			Case rate per 100,000 population aged 60 years and over (weekly)	Case rate per 100,000 population aged 17-21 year olds (weekly)	Community outbreaks (Last 7 days)	Confirmed cases in previous 7 days
				Red	Amber	Green			Red	Amber	Green				
East Midlands	370.2	↑	8.3%	12	21	7		201.3	40	0	0	97.4	788.6		9736

Data definitions (see next slide for additional data)

Weekly case rate	Total number of confirmed cases in the most recent 7 day period per 100,000 population
Individuals tested per day per 100,000 (7-DMA)	Number of individuals tested per 100,000 population
Percentage individuals test positive (7-DMA)	Percentage of individuals tested with specimen dates in the most recent 7-days period who were positive for SARS-CoV-2
Community outbreaks	Number of outbreaks reported to PHE during the 7 day period, excluding those reported from secondary healthcare and care home settings.

Data for positive cases with specimen dates between **10 October and 16 October 2020**

Arrows demonstrate how figures compare to the equivalent figure as of **9 October 2020**

Percentage positive: Red >7.5%, Amber >4 to 7.5%

Weekly case rate: Red >50 cases per 100,000 per week, Amber >25 per 100,000 per week

Test positivity and testing rate metrics based on updated methodology from 20th October

High level summary 2 – lower tier local authorities

Local authority areas of interest

This table contains the areas with the highest weekly case rates

Data for specimens taken/outbreaks reported between **10 October 2020 and 16 October 2020** (7 day).

Arrows demonstrate how figures compare to the equivalent figure as of **9 October 2020**.

Percentage positive: Red >7.5%, Amber >4 to 7.5%

Weekly case rate: Red >50 cases per 100,000 per week, Amber >25 per 100,000 per week

Local COVID Alert Level

Medium - areas where national restrictions continue to be in place.

High - areas with a higher level of infections where some additional restrictions are in place.

Very High - areas with a very high level of infections and where tighter restrictions are in place.

The restrictions placed on areas can vary, and are based on discussions between central and local government.

Some Local Authority areas have been included as part of wider geographical interventions.

Percentage prevalence of COVID-19 across England and NHS regions - table

Data generated 19 October 2020 by PHE Joint Modelling Cell

Methodology

The percentage prevalence of COVID-19 infections in the regional populations are rated using the following scale:

- Low prevalence: less than 0.5%
- Medium prevalence: 0.5% to, but not including, 2%
- High prevalence: 2% and above.

Case rate estimates have been generated by the Cambridge real-time model on **17 October 2020**, using data up to **11 October 2020**. The previous 10 days of case rates have been summed to provide an estimate for prevalence.

All prevalence estimates are reported as percentages, the values in parentheses represent the 5th and 95th percentiles respectively.

	12/10/2020	19/10/2020	26/10/2020
England	0.516 (0.387, 0.7)	0.821 (0.581, 1.164)	1.289 (0.86, 1.898)
North East and Yorkshire	0.966 (0.635, 1.481)	1.657 (0.96, 2.805)	2.739 (1.411, 5.098)
North West	1.505 (1.004, 2.208)	2.277 (1.317, 3.645)	3.271 (1.674, 5.69)
Midlands	0.3 (0.165, 0.494)	0.405 (0.18, 0.783)	0.541 (0.195, 1.242)
East of England	0.257 (0.124, 0.498)	0.473 (0.177, 1.146)	0.861 (0.25, 2.605)
London	0.369 (0.175, 0.685)	0.489 (0.179, 1.124)	0.643 (0.18, 1.825)

Percentage prevalence of COVID-19 across England and NHS regions - charts

Data generated 19 October 2020 by PHE Joint Modelling Cell

Case rate estimates have been generated by the Cambridge real-time model on **17 October 2020**, using data up to **11 October 2020**. The previous 10 days of case rates have been summed to provide an estimate for prevalence.

Prevalence estimates set against the prevalence boundaries.

Solid line shows the point prevalence estimates, with the grey boundary covering the 5th to 95th centile range.

Solid vertical line shows the time of lockdown.

Dashed vertical line is the cutoff date for data that are used to generate the real-time model results.

NHS 111 'potential COVID-19' calls

NHS 111 'potential COVID-19' calls, alarms over the past 7 days (14 Oct 2020 to 20 Oct 2020)

The alarms are intended to give early warning of local authorities where rates are higher than the national average. Due to a lack of historical data it is not yet possible to take into account any systematic bias which may result in one authority consistently recording above average rates independently of the underlying incidence of COVID-19.

Area	Number of alarms in past 7 days	Alarm category
Barnsley		Alarms yesterday and during past week
Nottinghamshire		Alarms yesterday and during past week
Bradford		Alarms yesterday and during past week
Derbyshire		Alarms yesterday and during past week
Derby		Alarms yesterday and during past week
Sandwell		Alarms yesterday and during past week
Wakefield		Alarms yesterday and during past week
Birmingham		Alarms yesterday and during past week
Doncaster		Alarms yesterday and during past week
Kingston upon Hull, City of		Alarms yesterday and during past week
Middlesbrough		Alarms yesterday and during past week
Southampton		Alarm yesterday only
Leicestershire, including Rutland		Alarm(s) during past week but not yesterday
Sheffield		Alarm(s) during past week but not yesterday
Leeds		Alarm(s) during past week but not yesterday
Rotherham		Alarm(s) during past week but not yesterday
Calderdale		Alarm(s) during past week but not yesterday
North Yorkshire		Alarm(s) during past week but not yesterday
Portsmouth		Alarm(s) during past week but not yesterday
Blackpool		Alarm(s) during past week but not yesterday
East Riding of Yorkshire		Alarm(s) during past week but not yesterday
Hammersmith and Fulham		Alarm(s) during past week but not yesterday
Kirklees		Alarm(s) during past week but not yesterday
Knowsley		Alarm(s) during past week but not yesterday
North East Lincolnshire		Alarm(s) during past week but not yesterday
North Lincolnshire		Alarm(s) during past week but not yesterday
Northumberland		Alarm(s) during past week but not yesterday
Nottingham		Alarm(s) during past week but not yesterday
Salford		Alarm(s) during past week but not yesterday
Solihull		Alarm(s) during past week but not yesterday
South Gloucestershire		Alarm(s) during past week but not yesterday
Stockton-on-Tees		Alarm(s) during past week but not yesterday
Sunderland		Alarm(s) during past week but not yesterday
West Berkshire		Alarm(s) during past week but not yesterday

NHS 111 'potential COVID-19' calls

The NHS 111 'potential COVID-19' syndromic indicator should be used to monitor trends in calls rather than numbers. These data are based on potential COVID-19 symptoms reported by callers and are not based on outcomes of tests for coronavirus.

NHS 111 potential COVID-19 calls, alarms over past 7 days (14/10/20 - 20/10/20)

alarm category

Alarm methodology

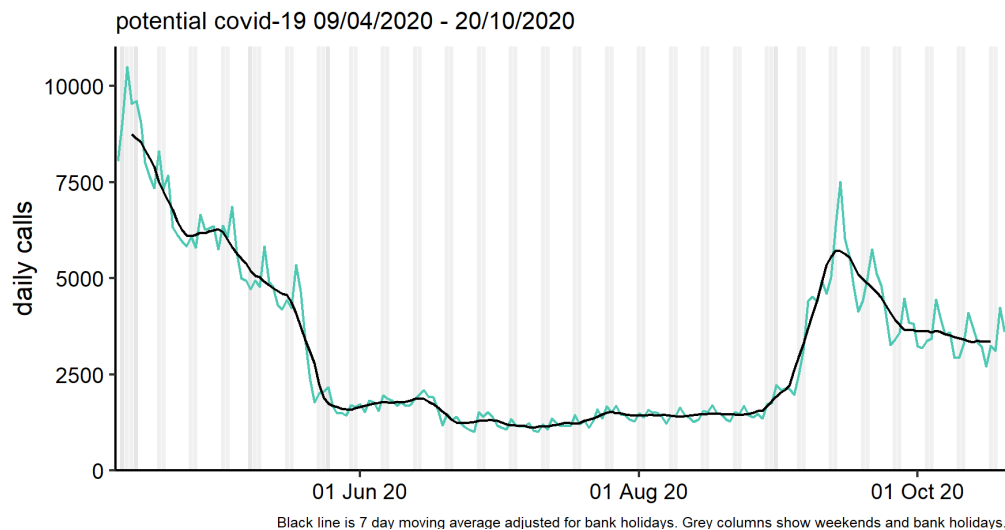

Populations are based on ONS estimates for mid-2019. Rates are number of calls per 100,000 people.

The 'expected' number of calls in a local authority is based on the average rate across England each day. The threshold is calculated as $\text{expected calls} + 3 * \sqrt{\text{expected calls}}$ i.e. assuming data follows a Poisson distribution.

An alarm is generated if call numbers are above the threshold.

NHS 111 'potential COVID-19' calls

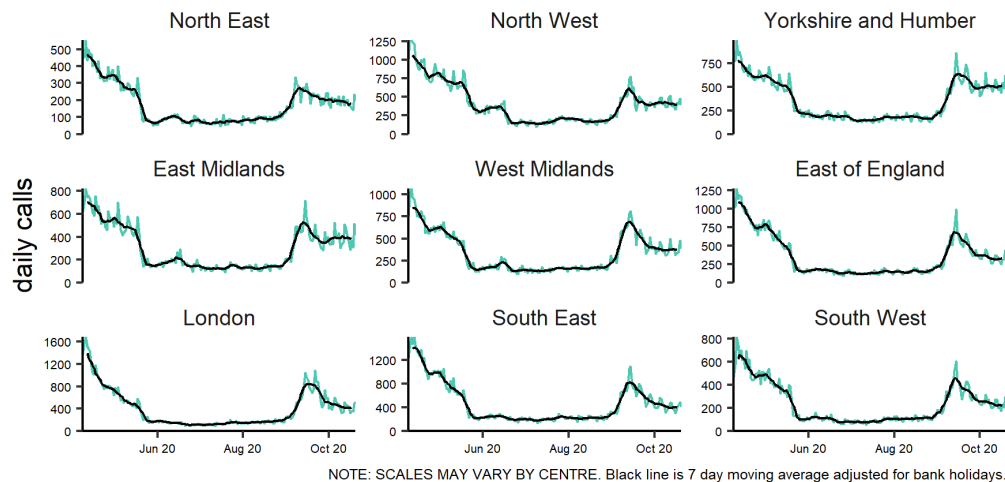

Trends in daily NHS 111 'potential COVID-19' calls, national, PHE Centre and by age (to 20 October)

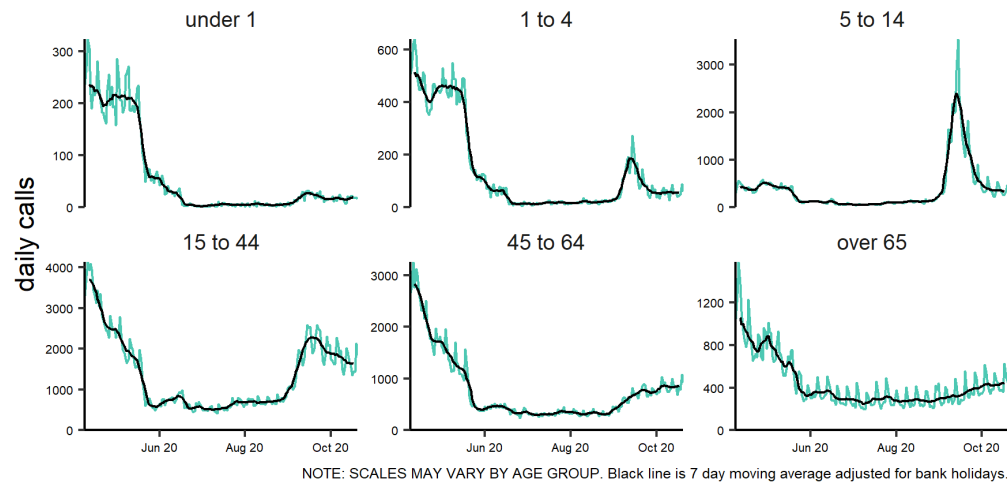

NHS 111 'potential COVID-19' calls

- These data are based on 'potential COVID-19' symptoms reported by callers
- These data are not based on outcomes of tests for coronavirus
- Charts should be used to monitor trends (not the actual number of people symptomatic in the community)
- Daily and 7-day moving averages are shown in all charts
- PHE Centre charts should only be compared for trend, not number of calls (PHE Centre population size varies). Please note the different scales on these charts.

potential covid-19 by PHE Centre 09/04/2020 - 20/10/2020

potential covid-19 by age group (years) 09/04/2020 - 20/10/2020

Further information and weekly NHS 111 reports containing potential COVID-19 call and online assessment surveillance data is available from the [PHE Remote Health Advice bulletin](#).

Care homes report changes from 20 July 2020

- **From 20 July 2020, this report uses a revised dataset which includes all reports recorded as outbreaks or clusters and is not deduplicated;** a second outbreak in the same care home will be shown (previously these were removed). It is no longer appropriate to deduplicate care home outbreaks because this risks not showing recent repeat outbreaks in care homes
- Some outbreaks are recorded in HPZone as being in care homes when in fact they are in another similar institution. The report **now only includes those we recognise are in CQC-registered care homes** now possible due to changes in data entry at a local level
- All reports to PHE are shown because this is the earliest signal that there may be a 'true' outbreak, but also shown are those with at least 2 symptomatic individuals (at the time of first report) to give an indication of those more likely to be 'true' outbreaks. Other work is underway linking test results to outbreaks which will supplement this analysis
- There are a small number of reports of outbreaks where the number of symptomatic individuals is recorded as unknown (shown by PHE centre) – work continues to improve the data

Weekly report on Acute Respiratory Infection (ARI) Situations reported to PHE

Methodology, data sources and limitations

- We report on new acute respiratory infection (ARI) situations reported to Health Protection Teams (HPTs) and entered on HPZone in the previous reporting week by setting and locality.
- Daily and weekly aggregated surveillance reports are extracted from HPZone to generate the line listing.
- The weekly extracts include situations reported in the previous epidemiological week (Monday to Sunday) by locality and context (setting e.g. school)
- Situations associated with Educational settings and Workplaces undergo further investigation. Individual case notes are reviewed by an epidemiologist and an assessment made about whether the criteria for a confirmed COVID-19 cluster or outbreak are met. See definitions.
- Situations associated with Educational settings, Workplaces, Other settings and Food Outlets/ Restaurants are also further classified into sub-categories by review of individual records.
- It is important to note that many of these situations remain live and so the description presented here may not necessarily be final.
- Due to the increasing volume of situations and the different methodologies in place in PHE regions, the situations captured by HPT represent a subset of all ongoing clusters and outbreaks in England rather than an exhaustive listing.
- Of note a national school helpline started operating on 17 September 2020 and a Universities helpline started operating on 7 October. This is likely to have had an impact on the number of situations/outbreaks being reported to HPTs in these settings.
- The denominator (the overall number of settings in each category) will differ by the setting category, for example there are fewer hospitals than workplaces, as will the propensity to report incidents to PHE. Therefore these data are more useful for monitoring trends over time than making comparisons across setting categories.

Definitions

Cluster: two or more test-confirmed cases of COVID-19 among individuals associated with a specific non-residential setting with illness onset dates within a 14-day period (in the absence of detailed information about the type of contact between the cases).

Outbreak: two or more test-confirmed cases of COVID-19 among individuals associated with a specific non-residential setting with illness onset dates within 14 days, and one of:

- Identified direct exposure between at least 2 of the test-confirmed cases in that setting (for example under one metre face to face, or spending more than 15 minutes within 2 metres) during the infectious period of one of the cases

- When there is no sustained local community transmission - absence of an alternative source of infection outside the setting for the initially identified cases

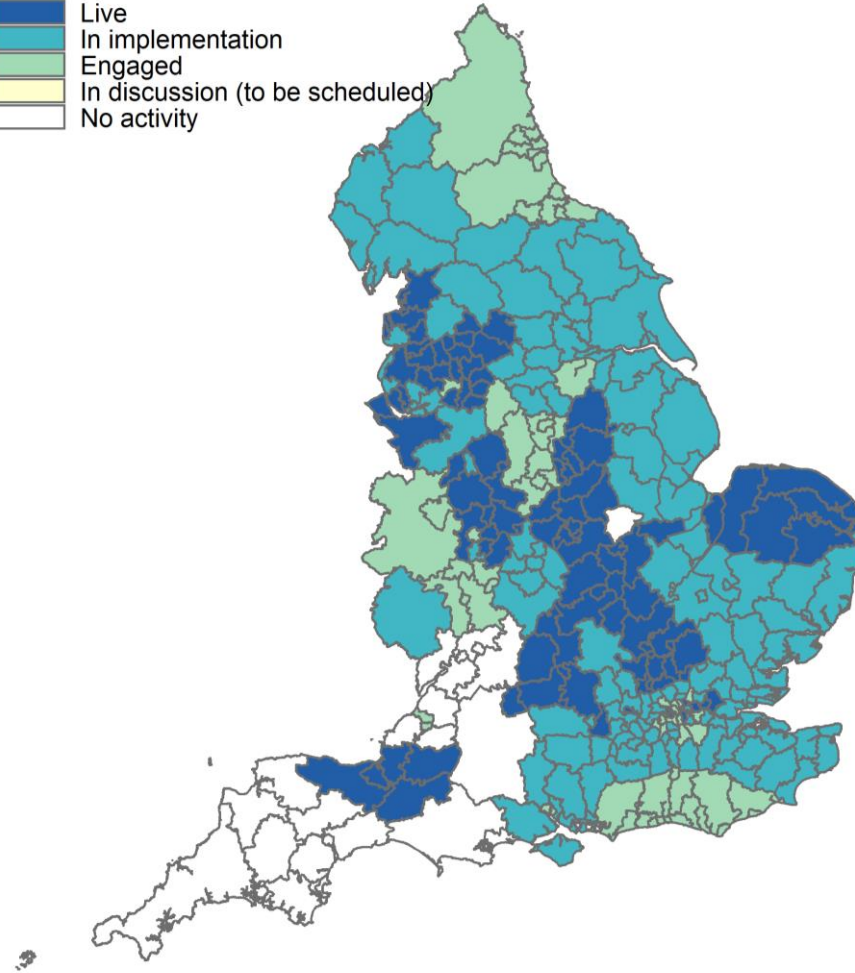

Locally supported contact tracing

Data extracted 20 October 2020

Locally supported contact tracing

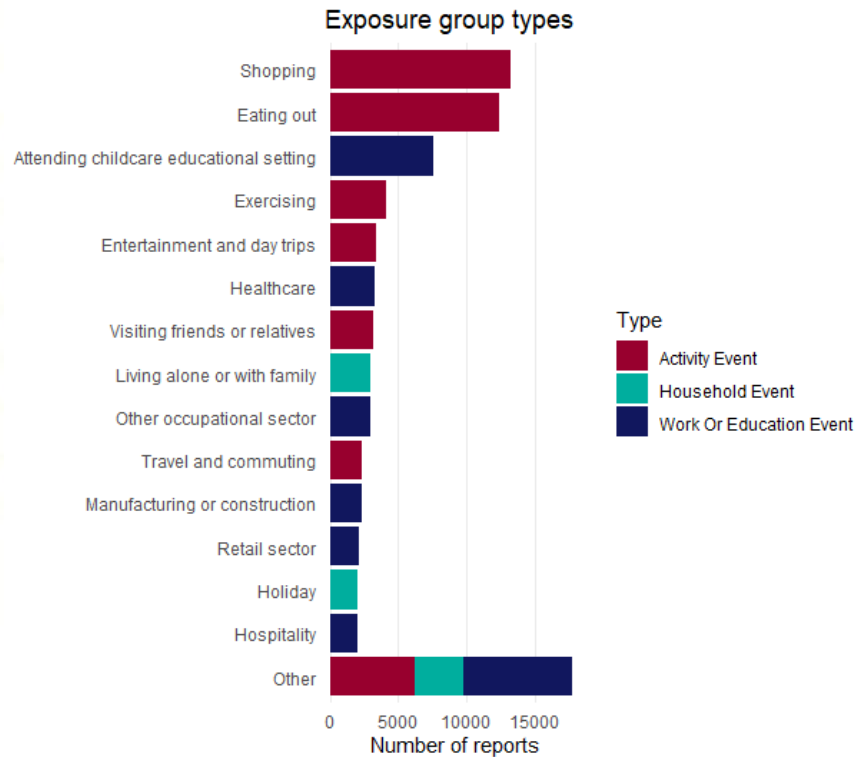

Enhanced contact tracing

Exposure setting for all reported contacts

(Data source: NHS Test and Trace)

Data from the **5 October to 11 October 2020**
42,519 individuals
81,772 events

type	exposure_group_type	n
Activity Event	Shopping	13284
Activity Event	Eating Out	12401
Work Or Education Event	Attending childcare educational setting	7596
Activity Event	Exercising	4071
Activity Event	Entertainment and day trips	3392
Work Or Education Event	Healthcare	3230
Activity Event	Visiting friends or relatives	3178
Household Event	Living alone or with family	2950
Work Or Education Event	Other occupational sector	2934
Activity Event	Other	2864
Activity Event	Travel and commuting	2382
Work Or Education Event	Manufacturing or construction	2308
Work Or Education Event	Retail sector	2177
Household Event	Holiday	2051
Work Or Education Event	Hospitality	2022
Activity Event	Other (combined)	3384
Household Event	Other (combined)	3569
Work Or Education Event	Other (combined)	7979

Data extracted 15 October 2020

*'Other (combined)' categories are defined on the next slide

Enhanced contact tracing

Exposure setting for all reported contacts

(Data source: NHS Test and Trace)

“Other (combined)” categories include

type	exposure_group_type
Activity Event	Community and charity activities
Activity Event	Personal care
Activity Event	Private events and celebrations
Activity Event	Public events and mass gathering
Activity Event	Sport events
Activity Event	Visiting a health or social care setting for non covid 19 reasons
Activity Event	Visiting a military setting
Activity Event	Visiting a prison or detention facility
Activity Event	Worship and prayer
Household Event	Other
Household Event	Shared
Household Event	Supported living
Work Or Education Event	Arts entertainment or recreation
Work Or Education Event	Civil service or government
Work Or Education Event	Close contact services
Work Or Education Event	Critical national infrastructure
Work Or Education Event	Emergency services
Work Or Education Event	Financial services
Work Or Education Event	Food production
Work Or Education Event	Immigration border services
Work Or Education Event	Information and communication
Work Or Education Event	Military
Work Or Education Event	Prison
Work Or Education Event	Social care
Work Or Education Event	Teaching and education
Work Or Education Event	Transport
Work Or Education Event	Warehouse or distribution
Work Or Education Event	Work travel or activity outside workplace

International flights reported through enhanced contact tracing

Data extracted 28 August 2020

1,0851 cases completed enhanced contact tracing, [REDACTED]

Please note that these reflect travel reported and not confirmed sources of infection

Enhanced contract tracing is undertaken to identify potential sources of infection, as well as individuals whom a case may have infected. This involves asking cases about their exposures/contacts from day 3-7 prior to onset of symptoms (or test date if the case is asymptomatic).

Data extracted from NHS Test and Trace at 04:30, 28/08/2020.

Second Generation Surveillance System (SGSS)

Data as of 20 October 2020 00:00hrs

Laboratory-confirmed cases reported to PHE. SGSS data is further de-duplicated and cleaned by the PHE ICC Epidemiology Cell. The dataset includes all positive COVID-19 cases reported through both Pillar 1 and Pillar 2 testing. Numbers in most recent days may rise due to potential delays to data reporting and validation. The number of confirmed cases reflects both the case rate of infection and testing rates.

PHE Unified Sample Dataset (USD)

Data as of 21 October 2020 00:00hrs

Data on individuals testing negative for SARS-CoV2 in both Pillar 1 and 2. This data is deduplicated to only include one record for any individual who has had only negative samples

HPZone case and incident management system

Data as of 21 October 2020 08:00hrs

Only outbreaks reported to PHE are included. Absolute numbers should be interpreted with caution. Reporting practice is known to vary with time and geography. Community outbreaks exclude outbreaks reported from secondary care and care home settings.
